Our C-BCBDC-2505 exam question is widely known throughout the education market. Almost all the candidates who are ready for the qualifying examination know our C-BCBDC-2505 exam questions. Even when they find that their classmates or colleagues are preparing a C-BCBDC-2505 exam, they will introduce our study materials to you. So, our learning materials help users to be assured of the C-BCBDC-2505 Exam. Currently, my company has introduced three versions of C-BCBDC-2505 learning materials, covering almost all the needs of the different customers.

SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q18-Q23):

NEW QUESTION # 18

A data analyst needs to find existing data assets within the organization, understand their structure, and determine their relevance for a new project. Which tools in SAP Business Data Cloud will assist in this task?

There are 3 correct answers to this question.

Response:

- A. Data Marketplace
- B. Data Quality Dashboard
- C. Data Catalog
- D. Data Monitor
- E. Data Builder

Answer: B,C,E

NEW QUESTION # 19

What are the styles of models?

There are 2 correct answers to this question.

Response:

- A. Planning
- B. On-premise
- C. Live
- D. Analytic

Answer: A,D

NEW QUESTION # 20

Which options do you have when using the remote table feature in SAP Datasphere? Note: There are 3 correct answers to this question.

- A. Data access can be switched from virtual to persisted, but not the other way around.
- B. Data can be accessed virtually by remote access to the source system.
- C. Data can be persisted by using real-time replication.
- D. Data can be persisted in SAP Datasphere by creating a snapshot (copy of data).
- E. Data can be loaded using advanced transformation capabilities.

Answer: B,C,D

Explanation:

The remote table feature in SAP Datasphere offers significant flexibility in how data from external sources is consumed and managed. Firstly, data can be accessed virtually by remote access to the source system (E). This means Datasphere does not store a copy of the data; instead, it queries the source system in real-time when the data is requested. This ensures that users always work with the freshest data. Secondly, data can be persisted in SAP Datasphere by creating a snapshot (copy of data) (C). This allows users to explicitly load a copy of the remote table's data into Datasphere at a specific point in time, useful for performance or offline analysis. Lastly, data can be persisted by using real-time replication (D). For certain source systems and configurations, Datasphere supports continuous, real-time replication, ensuring that changes in the source system are immediately reflected in the persisted copy within Datasphere. Option A is incorrect as the access mode cannot be arbitrarily switched, and option B refers to data flow capabilities, not inherent remote table access options.

NEW QUESTION # 21

What features are supported by the SAP Analytics Cloud data analyzer? Note: There are 3 correct answers to this question.

- A. Charts
- B. Linked dimensions
- C. Input controls
- D. Conditional formatting
- E. Calculated measures

Answer: C,D,E

Explanation:

The SAP Analytics Cloud Data Analyzer is designed for ad-hoc data exploration and analysis, providing a focused environment for users to quickly derive insights. Among its key supported features are calculated measures, which allow users to create new metrics on the fly based on existing data, enabling deeper analysis without modifying the underlying model. Input controls are also supported, providing interactive filtering capabilities that allow users to dynamically adjust the data displayed based on specific criteria, enhancing the flexibility of their analysis. Furthermore, conditional formatting is a valuable feature that enables users to apply visual styling (e.g., colors, icons) to data points based on defined rules, making it easier to identify trends, outliers, or specific conditions at a glance. While charts and linked dimensions are integral to full stories, the Data Analyzer's strength lies in its immediate, flexible analytical capabilities for a single data source.

NEW QUESTION # 22

In an SAP Analytics Cloud planning data model, which dimensions are included by default? Note: There are 2 correct answers to this question.

- A. Version
- B. Entity
- C. Organization
- D. Date

Answer: A,D

Explanation:

When creating a planning data model in SAP Analytics Cloud (SAC), certain dimensions are included by default to facilitate common planning scenarios. The two key dimensions automatically present are Version and Date. The Version dimension is crucial for distinguishing between different planning scenarios, such as "Actual," "Budget," "Forecast," or "Plan 2025," allowing users to compare and manage various iterations of their planning data. The Date dimension, on the other hand, is essential for time-based planning and analysis, enabling data entry, aggregation, and reporting across different time granularities like years, quarters, months, or days. These default dimensions provide a robust framework for financial and operational planning, serving as foundational elements around which planning activities are structured, and ensuring consistency and comparability across different planning versions and time periods.

NEW QUESTION # 23

.....

With the popularization of wireless network, those who are about to take part in the C-BCBDC-2505 exam guide to use APP on the mobile devices as their learning tool, because as long as entering into an online environment, they can instantly open the learning material from their appliances. Our C-BCBDC-2505 study materials provide such version for you. The online test engine is a kind of online learning, you can enjoy the advantages of APP version of our C-BCBDC-2505 Exam Guide freely. Moreover, you actually only need to download the APP online for the first time and then you can have free access to our C-BCBDC-2505 exam questions in the offline condition if you don't clear cache.
