

Certification DP-100 Sample Questions, DP-100 Exam Materials

MICROSOFT DP-100 CERTIFICATION EXAM QUESTIONS AND ANSWERS PDF

Microsoft DP-100 Exam

EDUSUM.COM

Get complete detail on DP-100 exam guide to crack Designing and Implementing a Data Science Solution on Microsoft Azure. You can collect all information on DP-100 tutorial, practice test, books, study material, exam questions, and syllabus. Firm your knowledge on Designing and Implementing a Data Science Solution on Microsoft Azure and get ready to crack DP-100 certification. Explore all information on DP-100 exam with number of questions, passing percentage and time duration to complete test.

DOWNLOAD the newest UpdateDumps DP-100 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1WNIkmDVQI3eADgPiPU0SiVnAxhwQyjdu>

A certificate is not only an affirmation of your ability, but also can improve your competitive force in the job market. DP-100 training materials of us can help you pass the exam and get the certificate successfully if you choose us. DP-100 exam dumps are reviewed by experienced experts, they are quite familiar with the exam center, and you can get the latest information of the DP-100 Training Materials if you choose us. We also pass guarantee and money back guarantee if you choose DP-100 exam dumps of us. You give us trust, and we will help you pass the exam successfully.

Microsoft DP-100: Designing and Implementing a Data Science Solution on Azure is a certification exam that is designed to evaluate a candidate's knowledge and skills in designing and implementing data science solutions on Microsoft Azure. DP-100 Exam is intended for data professionals, data scientists, and developers who want to demonstrate their expertise in implementing big data solutions on the Azure platform.

Microsoft DP-100 Exam Materials - Valid DP-100 Test Dumps

Maybe you are under tremendous pressure now, but you need to know that people's best job is often done under adverse circumstances. Ideological pressure, even physical pain, can be a mental stimulant. Turn pressure into power, which may be your chance to complete the transformation. But our DP-100 Exam Questions can help you become more competitive easier than you can imagine. With a pass rate of 98% to 100%, our DP-100 study materials can help you achieve your dream easily. And we have

money back guarantee on our DP-100 practice guide.

Step 2: Enrolling for the Instructor-Led Training Course

This is the most recommended way of preparing for the Microsoft DP-100 Exam. Microsoft offers the official training course under the title “Designing and Implementing a Data Science Solution on Azure” to help the students build a solid knowledge base for the test. The training sessions are delivered to the individuals by the world-class professionals with plenty of experience in the field. So, the candidates get trained accordingly in the best way possible. Another advantage of taking the instructor-led course is that you have an opportunity to ask your questions and receive feedback whenever you face difficulties.

Microsoft Designing and Implementing a Data Science Solution on Azure Sample Questions (Q37-Q42):

NEW QUESTION # 37

You use Azure Machine Learning to train a machine learning model.

You use the following training script in Python to perform logging:

```
import mlflow
mlflow.log_metric("accuracy", float(val_accuracy))
```

You must use a Python script to define a sweep job.

You need to provide the primary metric and goal you want hyperparameter tuning to optimize.

NOTE: Each correct selection is worth one point.

Answer Area

```
from azure.ai.ml.sweep import Uniform, Choice
command_job_for_sweep = command_job(
    learning_rate=Uniform(min_value=0.05, max_value=0.1),
    batch_size=Choice(values=[16, 32, 64, 128]),
)
sweep_job = command_job_for_sweep.sweep(
    compute="cpu-cluster",
    sampling_algorithm = "bayesian",
    primary_metric="val_accuracy",
    goal="Maximize",
)
```

The image shows a screenshot of a Python script defining a sweep job. The script uses the `azure.ai.ml.sweep` module to create a `command_job` and a `sweep_job`. The `primary_metric` is set to `val_accuracy` and the `goal` is set to `Maximize`. The screenshot also shows a dropdown menu for the `primary_metric` field with the following options: `accuracy`, `val_accuracy`, and `test-multi_logloss`. The `val_accuracy` option is selected. Another dropdown menu for the `goal` field is also visible, with the following options: `None`, `Minimize`, and `Maximize`. The `Maximize` option is selected.

Answer:

Explanation:

```

from azure.ai.ml.sweep import Uniform, Choice
command_job_for_sweep = command_job(
    learning_rate=Uniform(min_value=0.05, max_value=0.1),
    batch_size=Choice(values=[16, 32, 64, 128]),
)
sweep_job = command_job_for_sweep.sweep(
    compute="cpu-cluster",
    sampling_algorithm="bayesian",
    primary_metric="val_accuracy",
    goal="Maximize",
)
    
```

Explanation
Answer Area

```

from azure.ai.ml.sweep import Uniform, Choice
command_job_for_sweep = command_job(
    learning_rate=Uniform(min_value=0.05, max_value=0.1),
    batch_size=Choice(values=[16, 32, 64, 128]),
)
sweep_job = command_job_for_sweep.sweep(
    compute="cpu-cluster",
    sampling_algorithm="bayesian",
    primary_metric="val_accuracy",
    goal="Maximize",
)
    
```

NEW QUESTION # 38

You create an Azure Data Lake Storage Gen2 storage account named storage1 containing a file system named fs1 and a folder named folder1.

The contents of folder1 must be accessible from jobs on compute targets in the Azure Machine Learning workspace.

You need to construct a URI to reference folder1.

How should you construct the URI? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

abfss // fs1@storage1.dfs.core.windows.net/folder1/

Answer:

Explanation:

abfss // fs1@storage1.dfs.core.windows.net/folder1/

NEW QUESTION # 39

You create an Azure Databricks workspace and a linked Azure Machine Learning workspace.

You have the following Python code segment in the Azure Machine Learning workspace:

```
import mlflow
import mlflow.azureml
import azureml.mlflow
import azureml.core
from azureml.core import Workspace
subscription_id = 'subscription_id'
resource_group = 'resource_group_name'
workspace_name = 'workspace_name'
ws = Workspace.get(name=workspace_name,
subscription_id=subscription_id,
resource_group=resource_group)
experimentName = "/Users/{user_name}/{experiment_folder}/{experiment_name}" mlflow.set_experiment(experimentName) uri =
ws.get_mlflow_tracking_uri() mlflow.set_tracking_uri(uri) Instructions: For each of the following statements, select Yes if the
statement is true. Otherwise, select No.
```

NOTE: Each correct selection is worth one point.

	Yes	No
 A resource group and Azure Machine Learning workspace will be created.	<input type="radio"/>	<input type="radio"/>
An Azure Databricks experiment will be tracked only in the Azure Machine Learning workspace.	<input type="radio"/>	<input type="radio"/>
The epoch loss metric is set to be tracked.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

	Yes	No
 A resource group and Azure Machine Learning workspace will be created.	<input type="radio"/>	<input checked="" type="radio"/>
An Azure Databricks experiment will be tracked only in the Azure Machine Learning workspace.	<input checked="" type="radio"/>	<input type="radio"/>
The epoch loss metric is set to be tracked.	<input checked="" type="radio"/>	<input type="radio"/>

Reference:

NEW QUESTION # 40

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Python script named train.py in a local folder named scripts. The script trains a regression model by using scikit-learn. The script includes code to load a training data file which is also located in the scripts folder.

You must run the script as an Azure ML experiment on a compute cluster named aml-compute.

You need to configure the run to ensure that the environment includes the required packages for model training. You have instantiated a variable named aml-compute that references the target compute cluster.

Solution: Run the following code:

```

from azureml.train.dnn import TensorFlow
sk_est = TensorFlow(source_directory='./scripts',
                    compute_target=aml-compute,
                    entry_script='train.py')

```

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

Explanation

The scikit-learn estimator provides a simple way of launching a scikit-learn training job on a compute target. It is implemented through the SKLearn class, which can be used to support single-node CPU training.

Example:

```

from azureml.train.sklearn import SKLearn
}
estimator = SKLearn(source_directory=project_folder,
                    compute_target=compute_target,
                    entry_script='train_iris.py'
                    )

```

Reference:

<https://docs.microsoft.com/en-us/azure/machine-learning/how-to-train-scikit-learn>

NEW QUESTION # 41

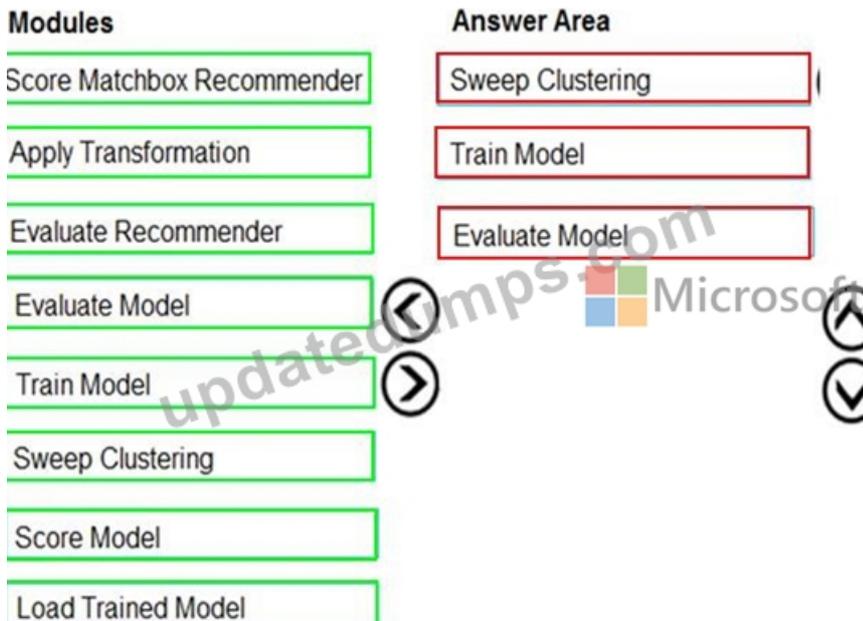

You need to produce a visualization for the diagnostic test evaluation according to the data visualization requirements.

Which three modules should you recommend be used in sequence? To answer, move the appropriate modules from the list of modules to the answer area and arrange them in the correct order.

Modules	Answer Area
Score Matchbox Recommender	<input type="text"/>
Apply Transformation	<input type="text"/>
Evaluate Recommender	<input type="text"/>
Evaluate Model	<input type="text"/>
Train Model	<input type="text"/>
Sweep Clustering	<input type="text"/>
Score Model	<input type="text"/>
Load Trained Model	<input type="text"/>

Answer:

Explanation:

Explanation:

Step 1: Sweep Clustering

Start by using the "Tune Model Hyperparameters" module to select the best sets of parameters for each of the models we're considering.

One of the interesting things about the "Tune Model Hyperparameters" module is that it not only outputs the results from the Tuning, it also outputs the Trained Model.

Step 2: Train Model

Step 3: Evaluate Model

Scenario: You need to provide the test results to the Fabrikam Residences team. You create data visualizations to aid in presenting the results.

You must produce a Receiver Operating Characteristic (ROC) curve to conduct a diagnostic test evaluation of the model. You need to select appropriate methods for producing the ROC curve in Azure Machine Learning Studio to compare the Two-Class Decision Forest and the Two-Class Decision Jungle modules with one another.
