#### **NEW QUESTION # 17**

In a scenario where non-convergence OTU boards process standard SDH signals, both site A and site B are WDM sites, and the R\_LOS alarm is detected on the client side of the OTU board at site A. After an alarm is processed on the WDM side of the OTU board, the REM\_5F alarm is reported on the client side of the downstream site B. Then, site B transmits the signals to its downstream client device and reports the R
