Topic 4	<ul style="list-style-type: none">• Manage applications: This section covers skills to manage application implementation, manage updates, and manage performance to support the performance of users to meet the needs of business organizations.

MD-102 Study Materials & Study MD-102 Demo

FreeCram provide all candidates with MD-102 test torrent that is compiled by experts who have good knowledge of exam, and they are very professional in compile study materials. Not only that, our team checks the update every day, in order to keep the latest information of our MD-102 Test Torrent. Once we have latest version, we will send it to your mailbox as soon as possible. It must be best platform to provide you with best material for your exam. So feel relieved when you buy our MD-102 guide torrent.

Microsoft Endpoint Administrator Sample Questions (Q192-Q197):

NEW QUESTION # 192

You manage 1.000 devices by using Microsoft Intune. You review the Device compliance trends report. For how long will the report display trend data?

- A. 90 days
- B. 60 days
- C. 365 days
- D. 30 days

Answer: B

Explanation:

The Device compliance trends report shows the number of devices that are compliant, noncompliant, and not evaluated over time. The report displays trend data for the last 60 days by default, but you can change the time range to view data for the last 7, 14, or 30 days as well. The report does not show data for more than 60 days. References: [Device compliance trends report]

NEW QUESTION # 193

Case Study 2 - Contoso Ltd

Overview

Contoso, Ltd, is a consulting company that has a main office in Montreal and two branch offices in Seattle and New York. Contoso has the users and computers shown in the following table.

□ The company has IT, human resources (HR), legal (LEG), marketing (MKG) and finance (FIN) departments.

Contoso uses Microsoft Store for Business and recently purchased a Microsoft 365 subscription.

The company is opening a new branch office in Phoenix. Most of the users in the Phoenix office will work from home.

Existing Environment

The network contains an Active Directory domain named contoso.com that is synced to Microsoft Azure Active Directory (Azure AD).

All member servers run Windows Server 2016. All laptops and desktop computers run Windows 10 Enterprise.

The computers are managed by using Microsoft System Center Configuration Manager. The mobile devices are managed by using Microsoft Intune.

The naming convention for the computers is the department acronym, followed by a hyphen, and then four numbers, for example, FIN-6785. All the computers are joined to the on-premises Active Directory domain.

Each department has an organization unit (OU) that contains a child OU named Computers. Each computer account is in the Computers OU of its respective department.

Intune Configuration

The domain has the users shown in the following table.

□ User2 is a device enrollment manager (DEM) in Intune.

The devices enrolled in Intune are shown in the following table.

□ The device compliance policies in Intune are configured as shown in the following table.

□ The device compliance policies have the assignments shown in the following table.

□ The device limit restrictions in Intune are configured as shown in the following table.

Requirements

Planned Changes

Contoso plans to implement the following changes:

- Provide new computers to the Phoenix office users. The new computers have Windows 10 Pro preinstalled and were purchased

already.

- Start using a free Microsoft Store for Business app named App1.
- Implement co-management for the computers.

Technical Requirements

Contoso must meet the following technical requirements:

- Ensure that the users in a group named Group4 can only access Microsoft Exchange Online from devices that are enrolled in Intune.
- Deploy Windows 10 Enterprise to the computers of the Phoenix office users by using Windows Autopilot.
- Monitor the computers in the LEG department by using Windows Analytics.
- Create a provisioning package for new computers in the HR department.
- Block iOS devices from sending diagnostic and usage telemetry data.
- Use the principle of least privilege whenever possible.
- Enable the users in the MKG department to use App1.
- Pilot co-management for the IT department.

Drag and Drop Question

You need to meet the technical requirements for the LEG department computers.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

<https://www.systemcenterdudes.com/sccm-windows-analytics-log-analytics/>

NEW QUESTION # 194

You have devices that are not rooted enrolled in Microsoft Intune as shown in the following table.

The devices are members of a group named Group1.

In Intune, you create a device compliance location that has the following configurations:

- * Name: Network1
- * IPv4 range: 192.168.0.0/16

In Intune, you create a device compliance policy for the Android platform. The policy has the following configurations:

- * Name: Policy1
- * Device health: Rooted devices: Block
- * Locations: Location: Network1
- * Mark device noncompliant: Immediately
- * Assigned: Group1

The Intune device compliance policy has the following configurations:

- * Mark devices with no compliance policy assigned as: Compliant
- * Enhanced jailbreak detection: Enabled
- * Compliance status validity period (days): 20

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Device1 is marked as compliant. = No Device2 is marked as compliant. = Yes Device3 is marked as compliant. = No

* Device1 is marked as noncompliant because it is rooted and the device compliance policy Policy1 blocks rooted devices under the Device health setting1.

* Device2 is marked as compliant because it is not rooted and it is within the network location Network1 that is specified in the device compliance policy Policy11.

* Device3 is marked as noncompliant because it is outside the network location Network1 that is specified in the device compliance policy Policy11. The device compliance location setting requires devices to be in a specific network range to be compliant2.

NEW QUESTION # 195

You need a new conditional access policy that has an assignment for Office 365 Exchange Online.

You need to configure the policy to meet the technical requirements for Group4.

Which two settings should you configure in the policy? To answer, select the appropriate settings in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

The policy needs to be applied to Group4 so we need to configure Users and Groups.

The Access controls are set to Block access

We therefore need to exclude compliant devices.

From the scenario:

* Ensure that the users in a group named Group4 can only access Microsoft Exchange Online from devices that are enrolled in Intune.

Note: When a device enrolls in Intune, the device information is updated in Azure AD to include the device compliance status. This compliance status is used by conditional access policies to block or allow access to e-mail and other organization resources.

References:

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/overview>

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/conditions>

<https://docs.microsoft.com/en-us/intune/device-compliance-get-started>

NEW QUESTION # 196

You have a Microsoft 365 subscription.

You plan to use Conditional Access policies.

You need to identify which scenarios the policies will support.

Which two scenarios should you identify? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Force users to install the latest Windows and Microsoft Office updates before they sign in to Office 365.
- B. Force users to renew an expired SSL certificate.
- C. Block users from using legacy authentication when signing in to Microsoft Exchange Online.
- D. Force users to update Windows Defender definition files before they sign in to Microsoft Office 365.
- E. Enforce multi-factor authentication (MFA) when users access a Microsoft Office 365 service.

Answer: C,E

Explanation:

A: Conditional Access allows administrators to control what Office 365 apps users can gain access to based on if they pass/fail certain conditions. These conditions are enforced by building a policy (or multiple policies) to control how users access your Office 365 resources.

Cloud Apps - What apps do you want to control? Conditional Access does not need to apply to all of Office 365, you can be more granular and just control access to specific apps - E.g. Exchange Online.

Access can be allowed to Office 365 with the following conditions:

* Require multi-factor authentication - User is allowed in but will need to complete additional security to log in.

* Etc.

D: The easiest way to block legacy authentication across your entire organization is by configuring a Conditional Access policy that applies specifically to legacy authentication clients and blocks access.
