SOA-C02 Unterlage - SOA-C02 Prüfungsübungen

Viele IT-Leute sind sich einig, dass Amazon SOA-C02 Zertifikat ein Sprungbrett zu dem Höhepunkt der IT-Branche ist. Deshalb kümmern sich viele IT-Experten um die Amazon SOA-C02 Zertifizierungsprüfung.

Die AWS Certified SYSOPS Administrator - Associate (SOA -C02) -Zertifizierungsprüfung ist für IT -Fachleute ausgelegt, die ihr Fachwissen für die Bereitstellung, Verwaltung und Betriebsanwendungen auf der AWS -Plattform demonstrieren möchten. Die Prüfung deckt eine breite Palette von Themen ab, einschließlich Überwachung, Bereitstellung, Automatisierung, Sicherheit,

Vernetzung und Fehlerbehebung. Das Bestehen dieser Prüfung zeigt, dass der Kandidat über die Fähigkeiten und Kenntnisse verfügt, die erforderlich sind, um Anwendungen auf AWS effektiv zu verwalten und zu betreiben.

Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) SOA-C02 Prüfungsfragen mit Lösungen (Q112-Q117):

112. Frage

A company runs several workloads on AWS. The company identifies five AWS Trusted Advisor service quota metrics to monitor in a specific AWS Region. The company wants to receive email notification each time resource usage exceeds 60% of one of the service quotas.

Which solution will meet these requirements?

- A. Use the AWS Service Health Dashboard to monitor each Trusted Advisor service quota metric. Configure an Amazon Simple Queue Service (Amazon SQS) queue for email notification each time that usage exceeds 60% of one of the service quotas.
- B. Use the AWS Service Health Dashboard to monitor each Trusted Advisor service quota metric. Configure an Amazon Simple Notification Service (Amazon SNS) topic for email notification each time that usage exceeds 60% of one of the service quotas.
- C. Create five Amazon CloudWatch alarms, one for each Trusted Advisor service quota metric. Configure an Amazon Simple Queue Service (Amazon SQS) queue for email notification each time that usage exceeds 60% of one of the service quotas.
- **D. Create five Amazon CloudWatch alarms, one for each Trusted Advisor service quota metric. Configure an Amazon Simple Notification Service (Amazon SNS) topic for email notification each time that usage exceeds 60% of one of the service quotas.**

Antwort: D

Begründung:

CloudWatch alarms allow you to monitor AWS resources, and you can configure an SNS topic to send an email notification each time one of the alarms is triggered. This will ensure that the company receives email notifications each time one of the service quotas is exceeded, allowing the company to take action as needed.

113. Frage

A SysOps administrator creates an AWS CloudFormation template to define an application stack that can be deployed in multiple AWS Regions.

The SysOps administrator also creates an Amazon CloudWatch dashboard by using the AWS Management Console. Each deployment of the application requires its own CloudWatch dashboard.

How can the SysOps administrator automate the creation of the CloudWatch dashboard each time the application is deployed?

- A. Export the existing CloudWatch dashboard as JSON. Update the CloudFormation template to define an AWS::CloudWatch::Dashboard resource. Include the exported JSON in the resource's DashboardBody property.
- **B. Create a script by using the AWS CLI to run the aws cloudformation put-dashboard command with the name of the dashboard. Run the command each time a new CloudFormation stack is created.**
- C. Update the CloudFormation template to define an resource. Use the intrinsic Ref function to reference the ID of the existing CloudWatch dashboard.

Antwort: B

Begründung:

D. Update the CloudFormation template to define an AWS::CloudWatch::Dashboard resource. Specify the name of the existing dashboard in the DashboardName property.

114. Frage

An ecommerce company uses an Amazon ElastiCache for Memcached cluster for in-memory caching of popular product queries on the shopping site. When viewing recent Amazon CloudWatch metrics data for the ElastiCache cluster, the SysOps administrator notices a large number of evictions.

Which of the following actions will reduce these evictions? (Choose two.)

- A. Add an additional node to the ElastiCache cluster.
- B. Increase the individual node size inside the ElastiCache cluster.
- C. Use Amazon Simple Queue Service (Amazon SQS) to decouple the ElastiCache cluster.
- D. Put an Elastic Load Balancer in front of the ElastiCache cluster.
- E. Increase the ElastiCache time to live (TTL).

Antwort: A,B

115. Frage

A company runs its infrastructure on Amazon EC2 instances that run in an Auto Scaling group.

Recently, the company promoted faulty code to the entire EC2 fleet. This faulty code caused the Auto Scaling group to scale the instances before any of the application logs could be retrieved.

What should a SysOps administrator do to retain the application logs after instances are terminated?

- A. Install the Amazon CloudWatch agent on the Amazon Machine Image (AMI) that is defined in the launch template. Configure the CloudWatch agent to back up the logs to ephemeral storage.
- B. Create a new Amazon Machine Image (AMI) that has a custom script configured to send logs to AWS CloudTrail. Update the launch template to use the new AMI.
- C. Configure an Auto Scaling lifecycle hook to create a snapshot of the ephemeral storage upon termination of the instances.
- D. Create a new Amazon Machine Image (AMI) that has the Amazon CloudWatch agent installed and configured to send logs to Amazon CloudWatch Logs. Update the launch template to use the new AMI.

Antwort: B

116. Frage

A company is building a web application on AWS. The company is using Amazon CloudFront with a domain name of `www.example.com`. All traffic to CloudFront must be encrypted in transit. The company already has provisioned an SSL certificate for `www.example.com` in AWS Certificate Manager (ACM).

Which combination of steps should a SysOps administrator take to encrypt the traffic in transit?

(Choose two.)

- A. Enter the alternate domain name (CNAME) of `www.example.com` for the CloudFront distribution. Select the custom SSL certificate.
- B. Configure an AWS WAF web ACL for the CloudFront distribution.
- C. Configure CloudFront Origin Shield for the CloudFront origin.
- D. For each cache behavior in the CloudFront distribution, modify the Viewer Protocol Policy setting to allow HTTP and HTTPS.
- E. For each cache behavior in the CloudFront distribution, modify the Viewer Protocol Policy setting to redirect HTTP to HTTPS.

Antwort: A,E
