C_SEC_2405 Download Free Dumps | C_SEC_2405 Latest Exam Cram

It is necessary to strictly plan the reasonable allocation of C_SEC_2405 test time in advance. Many students did not pay attention to the strict control of time during normal practice, which led to panic during the process of examination, and even some of them are not able to finish all the questions. If you purchased C_SEC_2405 learning dumps, each of your mock exams is timed automatically by the system. C_SEC_2405 learning dumps provide you with an exam environment that is exactly the same as the actual exam. It forces you to learn how to allocate exam time so that the best level can be achieved in the examination room. At the same time, C_SEC_2405 Test Question will also generate a report based on your practice performance to make you aware of the deficiencies in your learning process and help you develop a follow-up study plan so that you can use the limited energy where you need it most. So with C_SEC_2405 study tool you can easily pass the exam.

SAP Certified Associate - Security Administrator Sample Questions (Q70-Q75):

NEW QUESTION # 70

What is the authorization object required to define the start authorization for an SAP Fiori legacy Web Dynpro application?

- A. S_TCODE
- B. S_SERVICE
- **C. S_START**
- D. S_SDSAUTH

Answer: C

NEW QUESTION # 71

What are some of the rules for SAP-developed roles in SAP S/4HANA Cloud Public Edition? Note: There are 3 correct answers to this question.

- A. Role maintenance reads applications from role menus.
- **B. Role maintenance reads applications from a catalog.**
- **C. Authorization defaults define role authorizations.**
- **D. Catalogs are assigned to role menus.**
- E. Manual role authorizations are supported in custom catalogs.

Answer: B,C,D

Explanation:

SAP-developed roles in SAP S/4HANA Cloud Public Edition follow specific rules to ensure standardized and secure access

management. Role maintenance reads applications from a catalog, meaning that roles are built by incorporating apps and tiles from predefined business catalogs, which group related functionalities.

Authorization defaults define role authorizations, as SAP provides default authorization values for applications within these catalogs, ensuring consistent and secure permission assignments. Additionally, catalogs are assigned to role menus, allowing roles to include entire sets of applications and their associated authorizations, streamlining role configuration. Manual role authorizations in custom catalogs (option C) are not supported for SAP-developed roles, as these rely on predefined configurations. Role maintenance does not read applications from role menus (option B), as menus are an output of the catalog assignment process.

These rules ensure that SAP-developed roles are efficient, secure, and aligned with business processes, providing a robust framework for access control in SAP S/4HANA Cloud Public Edition.

NEW QUESTION # 72

What do you configure the Social Media deny providers?

- A. In the administration console for SAP Cloud identity Services
- B. In the code editor of the SAP Business Application Studio
- C. In the SAP BTP Cockpit Account Explorer

Answer: A

NEW QUESTION # 73

Which code does the authority-check return when a user does NOT have any authorizations for the authorization object checked?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

In SAP systems, the authority-check statement evaluates whether a user has the required authorizations for a specific authorization object. When a user does not have any authorizations for the checked object, the system returns a return code (SY-SUBRC) of 0. This indicates that the authorization check has failed, meaning the user lacks the necessary permissions to perform the requested action. The return code 0 is a standard indicator in ABAP programming for authorization failures, prompting the system to deny access or trigger an error message. Other return codes, such as 4, 12, or 16, may indicate different scenarios, like partial authorization or specific check conditions, but they are not applicable when no authorizations exist. Understanding this return code is crucial for developers and administrators to handle authorization errors effectively, ensuring that access control is enforced consistently across SAP applications. This mechanism supports SAP's robust security model, preventing unauthorized actions and maintaining system integrity.

NEW QUESTION # 74

Which protocol is the industry standard for provisioning identity and access management in hybrid landscapes?

- A. SCIM
- B. SAML
- C. OIDC
- D. SSL

Answer: A

NEW QUESTION # 75
