As long as you choose our Sustainable-Investing exam questions and pay successfully, you do not have to worry about receiving our learning materials for a long time. We assure you that you only need to wait 5-10 minutes and you will receive our Sustainable-Investing Exam Questions which are sent by our system. When you start learning, you will find a lot of small buttons, which are designed carefully. You can choose different ways of operation according to your learning habits to help you learn effectively.

CFA Institute Sustainable Investing Certificate (CFA-SIC) Exam Sample Questions (Q731-Q736):

NEW QUESTION # 731

Scopewashing is best described as a situation in which a company's management:

- A. Keeps quiet about its environmental goals for fear of retribution or misinterpretation.
- B. Uses hyperbole to highlight its sustainability-related skills and experience.
- **C. Emphasizes positive action in one ESG area while negatively contributing to another.**

Answer: C

Explanation:

Scopewashing (Option C) occurs when a company highlights progress in one ESG area while underreporting or neglecting negative impacts in another. Example:

A company boasts about renewable energy investments but continues to expand fossil fuel projects without full disclosure.

A firm promotes diversity hiring but has poor labor practices in its supply chain.

Option A (Using hyperbole) refers more to greenwashing rather than scopewashing.

Option B (Keeping quiet) is not scopewashing, but rather a lack of transparency.

NEW QUESTION # 732

ESG portfolio optimization most likely:

- A. Accepts lower active risk when optimizing for multiple factors.
- B. Applies a fixed decision to specific securities.
- **C. Requires defining an upper and lower bound for a given variable.**

Answer: C

Explanation:

ESG portfolio optimization involves setting upper and lower bounds for ESG-related variables (Option C) to balance financial

performance with ESG impact. For example:

Carbon footprint constraints: Ensuring portfolio emissions stay within a target range.

Sector exposure limits: Avoiding excessive concentration in high-emission industries.

Option A is incorrect because optimization is dynamic and does not apply rigid decisions.

Option B is incorrect because ESG optimization does not necessarily accept lower active risk-it depends on investor preferences.

NEW QUESTION # 733

Which of the following is most likely to cast doubt on a director's independence?

- **A. Holding cross-directorships**
- B. Receipt of director's fees from the company
- C. Serving as a director for a relatively short period of time

Answer: A

Explanation:

Holding cross-directorships can cast doubt on a director's independence because it creates potential conflicts of interest. When a director serves on multiple boards, especially if those companies have business relationships or overlapping interests, it may compromise their ability to act independently and objectively. This issue is recognized in various corporate governance codes and guidelines, which highlight the importance of directors being free from relationships that could interfere with their judgment.

NEW QUESTION # 734

Which of the following was established by the United Nations Environment Programme Finance Initiative (UNEP FI)?

- A. Global Sustainable Investment Alliance (GSIA)
- B. Climate Disclosure Standards Board (CDSB)
- **C. Principles for Sustainable Insurance (PSI)**

Answer: C

Explanation:

The Principles for Sustainable Insurance (PSI) were established by the United Nations Environment Programme Finance Initiative (UNEP FI). Here's a detailed explanation:

UNEP FI and PSI: The United Nations Environment Programme Finance Initiative (UNEP FI) launched the Principles for Sustainable Insurance in 2012. The PSI aims to promote sustainability within the insurance industry by encouraging insurers to integrate environmental, social, and governance (ESG) factors into their business strategies and operations.

Objectives of PSI: The PSI provides a global framework for the insurance industry to address ESG risks and opportunities. It helps insurers improve risk management and decision-making processes, enhance their reputation, and contribute to sustainable development.

Not the Other Options:

Climate Disclosure Standards Board (CDSB): The CDSB is an international consortium of business and environmental NGOs. It was not established by UNEP FI but aims to provide a framework for companies to report environmental information with the same rigor as financial information.

Global Sustainable Investment Alliance (GSIA): The GSIA is a collaboration of the world's largest sustainable investment membership organizations. It was also not established by UNEP FI but works to deepen the impact and visibility of sustainable investment organizations.

CFA ESG Investing Reference:

According to the CFA Institute, the PSI was developed by UNEP FI to promote the integration of ESG factors in the insurance industry, enhancing the industry's role in sustainable development (CFA Institute, 2020).

The PSI is highlighted as a key initiative under UNEP FI to advance sustainable insurance practices globally.

NEW QUESTION # 735

Examples of quantitative ESG analysis include:

- A. checking that an issuer's reporting on carbon emissions complies with a broadly accepted sustainability reporting framework.
- **B. tilting toward certain ESG factors in index-based strategies.**
- C. analyzing if an issuer's executive compensation policies are linked to progress on ESG-related goals.

Answer: B

Explanation:

CFA guidance notes that quantitative ESG analysis involves statistical or numerical methods to measure ESG factors—such as tilting a portfolio's weights toward high-ESG-rated companies in an index strategy. Options B and C involve qualitative assessments (governance policy linkages and disclosure compliance), not quantitative measurement of ESG exposures.

NEW QUESTION # 736

.....
