Updated ZDTA CBT & Useful Tips to help you pass Zscaler ZDTA: Zscaler Digital Transformation Administrator

PDF version of ZDTA training materials is legible to read and remember, and support printing request, so you can have a print and practice in papers. Software version of practice materials supports simulation test system, and give times of setup has no restriction. Remember this version support Windows system users only. App online version of ZDTA Exam Questions is suitable to all kinds of equipment or digital devices and supportive to offline exercise on the condition that you practice it without mobile data.

Zscaler Digital Transformation Administrator Sample Questions (Q49-Q54):

NEW QUESTION # 49

What does TLS Inspection for Zscaler Internet Access secure public internet browsing with?

- **A. Intermediate certificates are created for each client connection.**
- B. Removing certificates and reconnecting client connection using HTTP.
- C. Logging which clients receive the original webserver certificate.
- D. Storing connection streams for future customer review.

Answer: A

Explanation:

TLS Inspection in Zscaler Internet Access secures public internet browsing by creating intermediate certificates for each client connection. This Man-In-The-Middle approach enables Zscaler to decrypt and inspect encrypted traffic for threats and policy compliance while still maintaining secure connections with the client. The intermediate certificate acts as a trusted entity between the client and the real server during inspection.

NEW QUESTION # 50

What is Zscaler's rotation policy for intermediate certificate authority certificates?

- A. Certificates are rotated every 90 days and have a 180-day expiration.
- B. Lifetime certificates have no expiration date.
- **C. Certificates are rotated every seven days and have a 14-day expiration.**
- D. Certificates are issued dynamically and expire in 24 hours.

Answer: C

Explanation:

Zscaler's short-lived intermediate CA certificates on the ZIA Service Edges are valid for 14 days and are automatically rotated every 7 days, minimizing the window of exposure even if a private key is compromised.

NEW QUESTION # 51

Which filtering policy blocked access to the Network Application?

- A. Sandbox
- B. DLP
- C. Firewall Filtering
- D. Browser Control

Answer: C

Explanation:

Firewall Filtering policies govern network-level application traffic, so access to a Network Application is blocked by a Firewall Filtering rule.

NEW QUESTION # 52

Which type of attack plants malware on commonly accessed services?

- A. Remote access trojans
- B. Exploit kits
- C. Phishing
- D. Watering hole attack

Answer: D

Explanation:

A watering-hole attack compromises a legitimate website or service that the intended victims already trust and commonly visit. The attacker plants malicious active content, such as injected JavaScript or exploit code, so users are infected during normal browsing instead of being lured to an obviously suspicious site. The answer is Option D (Watering hole attack) because it specifically describes malware hosted on a commonly accessed service, which is the defining trait of this attack type.

Why the other options are incorrect:

A). Remote access trojans: A remote access trojan gives an attacker interactive control over a compromised host after infection.

B). Phishing: Phishing starts with social engineering: fake messages, links, or login pages. The question describes a legitimate common website being seeded with malicious JavaScript.

C). Exploit kits: Exploit kits automate exploitation after a victim reaches malicious content. They can be used inside an attack chain, but the scenario is naming the watering-hole delivery pattern.

NEW QUESTION # 53

What is Zscaler's rotation policy for intermediate certificate authority certificates?

- A. Certificates are rotated every 90 days and have a 180-day expiration.
- B. Lifetime certificates have no expiration date.
- C. Certificates are rotated every seven days and have a 14-day expiration.
- D. Certificates are issued dynamically and expire in 24 hours.

Answer: C

Explanation:

Intermediate CA rotation reduces exposure if a certificate were mishandled and keeps the inspection trust chain short-lived.

Zscaler's rotation model for intermediate CA certificates uses a short validity window rather than long-lived static certificates. Option C (Certificates are rotated every seven days and have a 14-day expiration) is correct because the tested rotation policy is seven-day rotation with a fourteen-day expiration.

Why the other options are incorrect:

A). Certificates are rotated every 90 days and have a 180-day expiration: Ninety-day rotation and 180-day expiration would leave intermediate certificates active much longer than the Zscaler inspection model described here.

B). Lifetime certificates have no expiration date: Lifetime certificates would never expire, which is the opposite of good inspection-certificate hygiene. Zscaler uses short-lived intermediate certificates.

D). Certificates are issued dynamically and expire in 24 hours: A 24-hour expiration would be unnecessarily short and is not the documented intermediate CA timing in this exam item.

NEW QUESTION # 54

.....

It's no exaggeration to say that it only takes you 20 to 30 hours with ZDTA practice quiz before exam. Past practice has proven that we can guarantee a high pass rate of 98% to 100% due to the advantage of high-quality. If you are skeptical about this, you can download a free trial of the version to experience our ZDTA Training Material. You can try any version of our ZDTA exam dumps as your favor, and the content of all three version is the same, only the display differs.
