**Quiz 2026 CRT-450: The Best Authentic Salesforce Certified Platform Developer I Exam Questions**

Our CRT-450 learning guide are developed in three versions which are the PDF, Software and APP online versions. The PDF version of CRT-450 training materials is convenient for you to print, the software version can provide practice test for you and the online version of our CRT-450 Study Materials is for you to read anywhere at any time. If you are hesitating about which version should you choose, you can download our CRT-450 free demo first to get a firsthand experience before you make any decision.

## Benefits of having SALESFORCE CRT-450 Certifications

As we know that SALESFORCE CRT-450 certification is mainly for the developer, it will not only help you learn some new skills, it can position you for a higher paying job or help you transform your current role into a Salesforce Platform Developer. Get prepared to take this exam and become one of the very first SALESFORCE Certified Platform Developer in the world using our relevance quality of SALESFORCE CRT-450 Exam study material and so we bring best-in-industry SALESFORCE CRT-450 Exam online course and practice exams for you to help in your exam preparation.

Salesforce CRT-450 (Salesforce Certified Platform Developer I) Certification Exam is designed for individuals who want to demonstrate their knowledge and skills in developing custom applications and functionality on the Salesforce platform. Salesforce Certified Platform Developer I certification exam is suitable for developers who have experience in programming languages such as Apex, Visualforce, and Lightning Components. CRT-450 Exam covers topics such as data modeling, security, user interface, business logic, and integration with other systems. Passing CRT-450 exam indicates that the individual is proficient in developing custom applications on the Salesforce platform and is recognized as a certified Salesforce Developer.

## Salesforce Certified Platform Developer I Sample Questions (Q226-Q231):

### NEW QUESTION # 226

Universal Containers wants Opportunities to be locked from editing when reaching the Closed/Won stage. Which two strategies should a developer use to accomplish this? (Choose two.)

- A. Use a validation rule.
- B. Use a Visual Workflow.
- C. Use a Trigger.
- D. Use the Process Automation Settings.

**Answer: A,C**

### NEW QUESTION # 227

Universal Containers wants Opportunities to no longer be editable when reaching the Closed/Won stage. How should a developer accomplish this?

- A. Use a validation rule.
- B. Make fields as read-only on the page layout.
- C. Use the Process Automation settings.
- D. Use Flow Builder.

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

A validation rule can be configured to prevent updates to Opportunity records in the Closed/Won stage by evaluating the Stage field and returning an error message when edits are attempted.

Reference:

Validation Rules

### NEW QUESTION # 228

What is the value of the Trigger.old context variable in a before insert trigger?

- A. Undefined
- B. null
- C. A list of newly created sObjects without IDs
- D. An empty list of sObjects

**Answer: D**

### NEW QUESTION # 229

Which two statements are true about using the @testSetup annotation in an Apex test class?

Choose 2 answers

- A. In a test setup method, test data is inserted once and made available for all test methods in the test class.
- B. The testSetup annotation is not supported when the cg5IsTest(SeeAllData=True) annotation is used.
- C. Records created in the test setup method cannot be updated in individual test methods.
- D. a method defined with the @testSetup annotation executes once for each test method in the test class and counts towards system limits.

**Answer: A,B**

Explanation:

Option C: In a test setup method, test data is inserted once and made available for all test methods in the test class. True.

The @testSetup method runs once before any test methods in the class.

Test data created in this method is available to all test methods, promoting code reuse and efficiency.

Reference:

Option D: The @testSetup annotation is not supported when the @isTest(SeeAllData=True) annotation is used. True.

The @testSetup method is not supported in test classes annotated with @isTest(SeeAllData=true).

Using SeeAllData=true accesses existing organization data, conflicting with the isolation provided by @testSetup.

Option A: A method defined with the @testSetup annotation executes once for each test method in the test class and counts towards system limits. False.

False.

The @testSetup method executes only once per test class, not once per test method.

It does count towards the per-test-class limits but improves overall test performance.

Option B: Records created in the test setup method cannot be updated in individual test methods. False.

False.

Records created in a @testSetup method can be queried and modified within individual test methods.

This allows tests to manipulate shared test data as needed.

Conclusion:

The correct statements are C and D, as they accurately describe the behavior and restrictions of the @testSetup annotation.

### NEW QUESTION # 230

Developer needs to automatically populate the Reports To field in a Contact record based on the values of the related Account and Department fields in the Contact record. Which type of trigger would the developer create? Choose 2 answers

- A. Before insert
- B. After update
- C. Before update
- D. After insert

**Answer: A,C**

### NEW QUESTION # 231
