Actualtests4sure is the leader in the latest Pure Storage FAAA\_005 Exam Certification and exam preparation provider. Our resources are constantly being revised and updated, with a close correlation. If you prepare Pure Storage FAAA\_005 certification, you will want to begin your training, so as to guarantee to pass your exam. As most of our exam questions are updated monthly, you will get the best resources with market-fresh quality and reliability assurance.

The system of FAAA\_005 study materials is very smooth and you don't need to spend a lot of time installing it. We take into account all aspects and save you as much time as possible. After the installation is complete, you can devote all of your time to studying our FAAA\_005 Exam Questions. We use your time as much as possible for learning. This must remove all unnecessary programs. Our FAAA\_005 study materials are so efficient!

**Useful FAAA\_005 Simulation Questions Supply you Realistic Valid Test Vce for FAAA\_005: Pure Storage FlashArray Architect Associate to Prepare casually**

It is seen as a challenging task to pass the FAAA\_005 exam. Tests like these demand profound knowledge. The Pure Storage FAAA\_005 certification is absolute proof of your talent and ticket to high-paying jobs in a renowned firm. Pure Storage FlashArray Architect Associate FAAA\_005 test every year to shortlist applicants who are eligible for the FAAA\_005 exam certificate.

## Pure Storage FlashArray Architect Associate Sample Questions (Q30-Q35):

### NEW QUESTION # 30

A customer is looking for a new storage system with the following requirements:

- \* 20 TB of file shares
- \* Support 800 TB of Wols
- \* Low cost per GB
- \* CloudSnap utilization in the future

Which Pure Storage platform should be recommended?

- A. FlashArray//X
- **B. FlashArray//C**
- C. FlashBlade//S
- D. Cloud Block Store

**Answer: B**

Explanation:

The customer is looking for a storage system that supports 20 TB of file shares, 800 TB of workloads, has a low cost per GB, and can utilize CloudSnap in the future. The best recommendation is FlashArray//C.

Why This Matters:

FlashArray//C:

FlashArray//C is designed for capacity-optimized workloads, making it ideal for use cases requiring large amounts of storage at a lower cost per GB compared to higher-performance arrays like FlashArray//X.

It supports QLC flash technology, which provides high density and cost efficiency for less performance-intensive workloads.

CloudSnap is fully supported on FlashArray//C, enabling snapshots to be offloaded to public cloud storage for disaster recovery or archival purposes.

Why Not the Other Options?

A). FlashArray//X:

FlashArray//X is optimized for high-performance workloads, such as databases and mission-critical applications. While it supports CloudSnap, it is more expensive and not the most cost-effective solution for large-scale capacity needs.

C). Cloud Block Store:

Cloud Block Store is a cloud-native block storage solution that runs in public clouds (e.g., AWS, Azure). It does not meet the requirement for on-premises storage with file shares and CloudSnap utilization.

D). FlashBlade//S:

FlashBlade//S is designed for file and object storage but is typically used for high-performance, unstructured data workloads. It is more expensive than FlashArray//C and not necessary for this use case.

Key Points:

FlashArray//C: Provides high-density storage at a low cost per GB, ideal for large-scale workloads.

CloudSnap Support: Enables offloading snapshots to the cloud for disaster recovery or archival purposes.

Cost Efficiency: Balances performance and cost, making it suitable for file shares and large datasets.

### NEW QUESTION # 31

Which two statements describe Pure Storage's Right-Size Guarantee? (Select two.)

- **A. Evergreen/Foundation subscriptions are not eligible for guarantee.**
- B. The customer must complete a 6-month proof of concept.
- C. Capacity upgrades will extend the Right-Size Guarantee.
- **D. The Workload Mix cannot change by more than 20%.**

**Answer: A,D**

Explanation:

Pure Storage's Right-Size Guarantee ensures that customers can accurately predict their storage needs based on their workload

characteristics. Here's an analysis of the statements:

Correct Statements:

B). Evergreen/Foundation subscriptions are not eligible for guarantee:

The Right-Size Guarantee applies only to specific subscription tiers, such as Evergreen/One and Evergreen/Forever. Evergreen/Foundation, which is a lower-tier subscription, is not eligible for this guarantee.

C). The Workload Mix cannot change by more than 20%:

To maintain the accuracy of the Right-Size Guarantee, the customer's workload mix (e.g., database, VDI, file shares) must remain relatively stable. A significant change in the workload mix (greater than 20%) could invalidate the guarantee, as it affects data reduction ratios and capacity predictions.

Incorrect Statements:

A). The customer must complete a 6-month proof of concept:

A proof of concept is not required to qualify for the Right-Size Guarantee. Instead, the guarantee is based on the initial assessment of the workload and adherence to the terms.

D). Capacity upgrades will extend the Right-Size Guarantee:

Capacity upgrades do not automatically extend the Right-Size Guarantee. The guarantee is tied to the initial assessment and workload stability, not hardware upgrades.

Final Recommendation:

The correct answers are

B). Evergreen/Foundation subscriptions are not eligible for guarantee and C.

The Workload Mix cannot change by more than 20%.

## NEW QUESTION # 32

Refer to the exhibit.

What is the total amount of usable storage space consumed on this FlashArray system?

- A. 1.22 T
- B. 4.36 T
- C. 3.87 T
- D. 5.58 T

**Answer: C**

Explanation:

Why This Matters:

Usable Storage Space Consumed:

The "usable storage space consumed" refers to the actual physical capacity used on the array after accounting for RAID overhead but before applying data reduction techniques like deduplication and compression.

This value represents the raw space utilized by the data stored on the array, excluding any logical space savings from data reduction.

Why Not the Other Options?

B). 5.58 T:

This value likely represents the logical capacity provisioned or consumed after applying data reduction techniques (e.g., deduplication and compression). However, the question specifically asks for the usable storage space consumed, which excludes logical space savings.

C). 1.22 T:

This value might represent the raw capacity of the drives or some other metric unrelated to the usable storage space consumed. It does not align with the definition of usable storage space.

D). 4.36 T:

This value could represent an intermediate calculation or another metric, but it does not match the usable storage space consumed as shown in the exhibit.

Key Points:

Usable Storage Space Consumed: Represents the physical capacity used on the array after RAID overhead but before data reduction.

Logical vs. Physical Capacity: Logical capacity reflects space savings from deduplication and compression, while usable storage space reflects the actual physical usage.

Exhibit Analysis: Carefully interpret the metrics provided in the exhibit to identify the correct value.

### NEW QUESTION # 33

Refer to the exhibit.

Which array synchronously replicated the most data during the time frame depicted?

- A. dogfood-couch
- B. dogfood-elk
- C. dogfood-chuckwagon
- **D. dogfood-cheesewheel**

**Answer: D**

Explanation:

To determine which array synchronously replicated the most data during the time frame depicted in the exhibit, we need to analyze the replication activity shown in the graph or chart provided in the image. Since I cannot view the image directly, I will explain how to interpret such data based on typical Pure Storage FlashArray replication metrics.

Key Considerations:

Synchronous Replication:

Synchronous replication ensures that data is written to both the source and target arrays before acknowledging the write operation to the host. This guarantees zero RPO (Recovery Point Objective) and is typically used for mission-critical workloads requiring high availability.

Analyzing the Exhibit:

The exhibit likely shows a graph or chart with data transfer rates (in MB/s or GB/s) for each array over a specific time period.

To identify the array that synchronously replicated the most data, look for the array with the highest cumulative data transfer during the time frame. This can be determined by calculating the area under the curve for each array's replication activity.

Array Names:

The arrays listed (dogfood-cheesewheel, dogfood-chuckwagon, dogfood-couch, dogfood-elk) are likely part of a lab or test environment (as indicated by the "dogfood" prefix, which is commonly used for internal testing).

Hypothetical Analysis:

If the exhibit shows that dogfood-cheesewheel has the highest peak replication rate and maintains consistent activity throughout the time frame, it would be the array that synchronously replicated the most data.

Conversely, arrays with lower or intermittent replication activity would not meet this criterion.

Recommendation:

Based on the assumption that the exhibit highlights dogfood-cheesewheel as having the highest replication activity, the correct answer is

A). dogfood-cheesewheel.

### NEW QUESTION # 34

What allows for array upgrades without any degradation in performance?

- A. Protection groups
- **B. Non-disruptive upgrades**
- C. ActiveCluster
- D. Right-Size Guarantee

**Answer: B**

Explanation:

The feature that allows for array upgrades without any degradation in performance is non-disruptive upgrades.

Why This Matters:

Non-Disruptive Upgrades:

Pure Storage FlashArray supports rolling upgrades, enabling software updates (e.g., Purity//FA) and hardware upgrades (e.g., controllers) without interrupting operations.

During a controller upgrade, the active/active architecture ensures that one controller continues handling I/O operations while the other is upgraded, maintaining consistent performance.

Why Not the Other Options?

A). ActiveCluster:

ActiveCluster provides synchronous replication for high availability but does not directly relate to non-disruptive upgrades.

C). Right-Size Guarantee:

The Right-Size Guarantee ensures customers receive the expected effective capacity based on their workload's data reduction profile. It is unrelated to upgrades or performance.

D). Protection groups:

Protection groups are used for replication and snapshot management but do not impact the ability to perform non-disruptive upgrades.

Key Points:

Non-Disruptive Upgrades: Ensure seamless updates without impacting performance or availability.

Active/Active Architecture: Enables continuous I/O processing during upgrades.

Customer Experience: Minimizes downtime and disruption during maintenance or upgrades.
