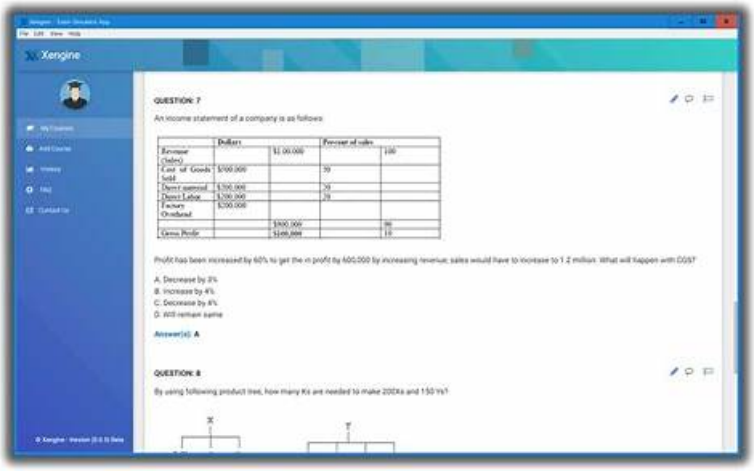
312-50v13 Certification Sample Questions - Exam 312-50v13 Learning



BTW, DOWNLOAD part of Actual4test 312-50v13 dumps from Cloud Storage: https://drive.google.com/open?id=1D0WCaHNrh3SVZW4DShPMChrO5oTKsCDA

The content system of 312-50v13 exam simulation is constructed by experts. After-sales service of our study materials is also provided by professionals. If you encounter some problems when using our 312-50v13 study materials, you can also get them at any time. After you choose 312-50v13 Preparation questions, professional services will enable you to use it in the way that suits you best, truly making the best use of it, and bringing you the best learning results.

Free demos of Actual4test 312-50v13 exam questions are available which you can download easily. Just choose the right Actual4test 312-50v13 exam questions format and download the 312-50v13 exam product demo free of cost. Check the top features of 312-50v13 Exam Questions and if you feel that the Actual4test Certified Ethical Hacker Exam (CEHv13) (312-50v13) certification exam practice material can work with you then take your buying decision and download it accordingly. Best of luck!!!

Exam 312-50v13 Learning - 312-50v13 Certification Torrent

Dear candidates, pass your test with our accurate & updated 312-50v13 training tools. As we all know, the well preparation will play an important effect in the 312-50v13 actual test. Now, take our 312-50v13 as your study material, and prepare with careful, then you will pass successful. If you really want to choose our ECCouncil 312-50v13 PDF torrents, we will give you the reasonable price and some discounts are available. What's more, you will enjoy one year free update after purchase of 312-50v13 practice cram.

ECCouncil Certified Ethical Hacker Exam (CEHv13) Sample Questions (Q449-Q454):

NEW QUESTION # 449
A penetration tester identifies malware on a system that hides its presence and gives an attacker access to administrative functions without being detected. What type of malware is this?

- A. Virus
- B. Ransomware
- C. Keylogger
- D. Rootkit

Answer: D

Explanation:
CEH courseware describes rootkits as specialized malware designed to conceal their presence while providing persistent,

unauthorized access to system-level functions. Rootkits typically modify low-level components of the operating system-such as kernel modules, drivers, or system processes-to hide files, processes, registry keys, and network connections. Their primary purpose is to grant attackers administrative privileges without triggering alerts, making them extremely stealthy and dangerous. CEH emphasizes that rootkits often accompany other malware to maintain long-term control after initial compromise. In contrast, viruses replicate by attaching to files, keyloggers record keystrokes but do not hide system-level access, and ransomware encrypts data rather than conceals operations. The defining characteristics in this scenario- cloaking activity, providing admin-level control, persisting undetected-are directly aligned with rootkit behavior as described in CEH training material.

NEW QUESTION # 450
Morris, a professional hacker, performed a vulnerability scan on a target organization by sniffing the traffic on the network lo identify the active systems, network services, applications, and vulnerabilities. He also obtained the list of the users who are currently accessing the network. What is the type of vulnerability assessment that Morris performed on the target organization?

- A. Credentialed assessment
- B. Passive assessment
- C. External assessment
- D. internal assessment

Answer: B

Explanation:
Passive Assessment Passive assessments sniff the traffic present on the network to identify the active systems, network services, applications, and vulnerabilities. Passive assessments also provide a list of the users who are currently accessing the network.

NEW QUESTION # 451
A penetration tester discovers malware on a system that disguises itself as legitimate software but performs malicious actions in the background. What type of malware is this?

- A. Spyware
- B. Trojan
- C. Worm
- D. Rootkit

Answer: B

Explanation:
CEH v13 defines a Trojan as malware that appears as a legitimate, trusted software application while secretly executing malicious actions behind the scenes. Trojans rely on deception rather than replication, often masquerading as tools, utilities, updates, or installers. Once executed, they may install backdoors, steal credentials, exfiltrate data, or modify system settings. The defining characteristic emphasized in CEH is the legitimate-looking facade combined with hidden malicious intent, which matches the scenario perfectly.
Spyware (Option B) focuses on monitoring and data collection but does not necessarily disguise itself as legitimate software. Worms (Option C) self-replicate across networks, which is not described here. Rootkits (Option D) hide system compromise but do not necessarily pose as legitimate software. Therefore, the malware described is a Trojan.

NEW QUESTION # 452
What is a NULL scan?

- A. A scan in which certain flags are off
- B. A scan in which the packet size is set to zero
- C. A scan in which all flags are turned off
- D. A scan in which all flags are on
- E. A scan with an illegal packet size

Answer: C

Explanation:
A NULL scan is a type of TCP scan where no TCP flags are set in the packet. This unconventional packet is used to evade firewalls

and intrusion detection systems and to determine the state of a port based on the response.
Behavior:
Open port # No response
Closed port # RST (Reset)
From CEH v13 Courseware:
Module 3: Scanning Networks
Topic: TCP Flag Scanning Methods
CEH v13 Study Guide states:
"A NULL scan sends a TCP packet with all flags turned off. The system's response (or lack thereof) allows the attacker to infer whether a port is open or closed, especially on UNIX-based systems." Incorrect Options:
B: Vague and inaccurate
C: Refers to Xmas scan (URG, PSH, FIN)
D/E: Irrelevant to TCP flags
Reference:CEH v13 Study Guide - Module 3: Scanning Networks # TCP NULL ScansRFC 793 - TCP Protocol Behavior
═══

NEW QUESTION # 453
What kind of detection technique is used in antivirus software that collects data from multiple protected systems and performs analysis in a cloud-based environment?

- A. Heuristics based
- B. VCloud based
- C. Honeypot based
- D. Behavior based

Answer: B

Explanation:
Comprehensive and Detailed Explanation:
VCloud-based (also known as Cloud-based or Cloud-assisted) antivirus leverages cloud computing to:
* Offload detection and analysis to powerful remote servers
* Provide real-time updates and threat intelligence
* Aggregate data from multiple endpoints to improve detection
This method is efficient, especially for zero-day threats and large-scale protection.
From CEH v13 Courseware:
* Module 6: Malware Threats # Modern Antivirus Technologies
Reference:CEH v13 Study Guide - Cloud-Based Antivirus Detection

NEW QUESTION # 454
.....

Desktop-based 312-50v13 practice exam software is the first format that Actual4test provides to its customers. It helps track the progress of the candidate from beginning to end and provides a progress report that is easily accessible. This ECCouncil 312-50v13 Practice Questions is customizable and mimics the real 312-50v13 exam, with the same format, and is easy to use on Windows-based computers. The product support staff is available to assist with any issues that may arise.
