Excellent Updated Deep-Security-Professional CBT bring you Complete Valid Deep-Security-Professional Test Voucher for Trend Trend Micro Certified Professional for Deep Security

In recent years, our Deep-Security-Professional test torrent has been well received and have reached 99% pass rate with all our dedication. As a powerful tool for a lot of workers to walk forward a higher self-improvement, our Deep-Security-Professional certification training continue to pursue our passion for advanced performance and human-centric technology. A good deal of

researches has been made to figure out how to help different kinds of candidates to get Trend Micro Certified Professional for Deep Security certification. We revise and update the Trend Micro Certified Professional for Deep Security guide torrent according to the changes of the syllabus and the latest developments in theory and practice. We base the Deep-Security-Professional Certification Training on the test of recent years and the industry trends through rigorous analysis.

Trend Micro Certified Professional for Deep Security Sample Questions (Q12-Q17):

NEW QUESTION # 12
Based on the policy configuration displayed in the exhibit, which of the following statements is true?

- A. If the Deep Security Manager does not receive a message from the Deep Security agent every 20 minutes, an alert will be raised.
- B. Deep Security Agents will send event information to Deep Security Manager every 10 minutes.
- C. Changes to any of the Deep Security policies will be send to the Deep Security Agents as soon as the changes are saved.
- D. Administrators with access to the protected Server will be able to uninstall the Deep Security Agent through Windows Control Panel.

Answer: D

NEW QUESTION # 13
Which of the following are valid methods for forwarding Event information from Deep Secu-rity? Select all that apply.

- A. Deep Security Application Programming Interface (API)
- B. Amazon Simple Notification Service (SNS)
- C. Simple Network Management Protocol (SNMP)
- D. Security Information and Event Management (SIEM)

Answer: B,C,D

Explanation:
Deep Security supports forwarding event information through SNMP traps, integration with SIEM systems, and retrieval via the Deep Security API. While Amazon SNS is not a native forwarding method for Deep Security events, the others are fully supported and configurable from the Deep Security Manager.
SNMP allows sending traps for specific alert types.
API provides programmatic access to events.
SIEM forwarding is supported via syslog or direct integration.

NEW QUESTION # 14
In the policy displayed in the exhibit, the state of the Web Reputation Protection Module is set to "Inherited (On)", while the state for the other Protection Module is set to "On". Why is the Web Reputation Protection Module displayed differently than the other Protection Modules.

- A. In this example, the state for the Web Reputation Protection Module is inherited from the parent policy, while the other Protection Modules were turned on at the computer level.
- B. In this example, the state for the Web Reputation Protection Module is listed as "In-herited (On)" as it was inherited from the default setting in the Base Policy.
- C. The state for a Protection Module is always displayed as "Inherited (On)" until the module components are installed on the Deep Security Agent.
- D. In this example, the state for the Web Reputation Protection Module is inherited from the parent policy, while the other Protection Modules were turned on specifically in this child policy.

Answer: D

Explanation:
The "Inherited (On)" state indicates that the module's configuration is inherited from the parent policy (here, the "Base Policy") and

has not been changed in the child policy. In contrast, modules listed as "On" were explicitly enabled or configured in the current child policy.

From the official documentation:

"A module set to 'Inherited (On)' means its configuration is inherited from a parent policy. Modules explicitly configured in the current policy are shown as 'On' or 'Off'." References:

NEW QUESTION # 15

Which of the following statements is true regarding Event Tagging?

- A. Only a single tag can be assigned to an Event.
- B. Adding a tag to an Event modifies the Event data by adding fields, including the name of the tag, the date the tag was applied, and whether the tag was applied manually or automatically
- C. Events can be tagged automatically if they are similar to known good Events.
- D. Events can be automatically deleted based on tags.

Answer: C

NEW QUESTION # 16

What is IntelliScan?

- A. IntelliScan is a malware scanning method that monitors process memory in real time. It can identify known malicious processes and terminate them.
- B. IntelliScan reduces the risk of viruses entering your network by blocking real-time compressed executable files and pairs them with other characteristics to improve mal-ware catch rates.
- C. IntelliScan is a mechanism that improves scanning performance. It recognizes files that have already been scanned based on a digital fingerprint of the file.
- D. IntelliScan is a method of identifying which files are subject to malware scanning as determined from the file content. It uses the file header to verify the true file type.

Answer: D

NEW QUESTION # 17

......

Our Deep-Security-Professional guide torrent boosts 98-100% passing rate and high hit rate. Our Deep-Security-Professional test torrent use the certificated experts and our questions and answers are chosen elaborately and based on the real exam. The language of our Deep-Security-Professional study torrent is easy to be understood and the content has simplified the important information. Our product boosts the function to simulate the Deep-Security-Professional Exam, the timing function and the self-learning and the self-assessment functions to make the learners master the Deep-Security-Professional guide torrent easily and in a convenient way.
