Pass Guaranteed 2026 - JN0-336 - Practice Security, Specialist (JNCIS-SEC) Mock
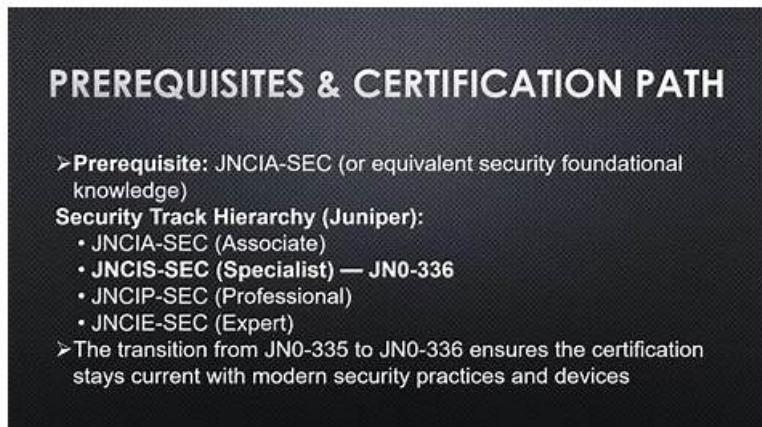

You will be cast in light of career acceptance and put individual ability to display. When you apply for a job you could have more opportunities than others. What is more, there is no interminable cover charge for our JN0-336 practice engine priced with reasonable prices for your information. Considering about all benefits mentioned above, you must have huge interest to our JN0-336 Study Materials. You should take the look at our JN0-336 simulating questions right now.

If you purchase our Security, Specialist (JNCIS-SEC) guide torrent, we can make sure that you just need to spend twenty to thirty hours on preparing for your exam before you take the exam, it will be very easy for you to save your time and energy. So do not hesitate and buy our JN0-336 study torrent, we believe it will give you a surprise, and it will not be a dream for you to pass your Security, Specialist (JNCIS-SEC) exam and get your certification in the shortest time.

Actual JN0-336 Exam Questions - JN0-336 Free Demo & JN0-336 Valid Torrent

With the popularization of wireless network, those who are about to take part in the JN0-336 exam guide to use APP on the mobile devices as their learning tool, because as long as entering into an online environment, they can instantly open the learning material from their appliances. Our JN0-336 study materials provide such version for you. The online test engine is a kind of online learning, you can enjoy the advantages of APP version of our JN0-336 Exam Guide freely. Moreover, you actually only need to download the APP online for the first time and then you can have free access to our JN0-336 exam questions in the offline condition if you don't clear cache.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q69-Q74):

NEW QUESTION # 69
After JSA receives external events and flows, which two steps occur? (Choose two.)

- A. Before the information is filtered, the information is formatted
- B. After the information is filtered, JSA responds with active measures
- C. Before formatting the data, the data is analyzed for relevant information.
- D. After formatting the data, the data is stored in an asset database.

Answer: A,D

Explanation:
When JSA (Juniper Secure Analytics) receives external events and flows, the typical processing steps are:
Option C. Before the information is filtered, the information is formatted.

Data formatting is an initial step in the process where raw data from events and flows is converted into a standard format that can be more easily processed and analyzed by JSA.
Option A. After formatting the data, the data is stored in an asset database.
Once the data is formatted, it is stored in an asset database. This database acts as a repository for all the formatted data, enabling JSA to perform further analysis, correlation, and eventually, to maintain a comprehensive view of the network assets and activities. These steps are part of JSA's comprehensive approach to security event management, which involves collecting, normalizing, and analyzing data to identify potential security threats and vulnerabilities efficiently.

NEW QUESTION # 70
Which two statements are true about the vSRX? (Choose two.)

- A. UNIX is the base OS.
- B. It does not have VMXNET3 vNIC support.
- C. It has VMXNET3 vNIC support.
- D. Linux is the base OS.

Answer: C,D

Explanation:
Reference: Juniper Networks Security, Specialist (JNCIS-SEC) Study Guide, Chapter 1: Introduction to Junos Security, page 1-8.
The vSRX is a virtual security appliance that runs on a virtual machine. It provides firewall, VPN, and other security services in a virtualized environment.
The vSRX is based on a version of Junos OS that is optimized for virtualization. It runs on a Linux kernel and uses a KVM hypervisor. It supports VMware ESXi and KVM hypervisors.
The vSRX has support for VMXNET3 vNICs, which are high-performance virtual network interfaces provided by VMware. These interfaces can provide higher throughput and lower CPU utilization than other virtual NIC types.

NEW QUESTION # 71
Which two statements are correct about a reth LAG? (Choose two.)

- A. Links must use the same cable type
- B. Links must have the same speed and duplex setting.
- C. You must have a "minimum-links" statement value of two.
- D. You should have two or more interfaces.

Answer: B,D

Explanation:
A reth LAG is a redundant Ethernet link aggregation group that combines multiple physical interfaces into a single logical interface in a chassis cluster. A reth LAG provides load balancing and redundancy for traffic within or between redundancy groups. Two statements that are correct about a reth LAG are:
Links must have the same speed and duplex setting: To form a reth LAG, the physical interfaces must have the same speed and duplex setting. This ensures that the links can operate at the same capacity and avoid performance issues or errors.
You should have two or more interfaces: To create a reth LAG, you need to have at least two physical interfaces. One interface should be connected to node 0 and the other interface should be connected to node 1. You can also have more than two interfaces in a reth LAG for increased bandwidth and redundancy.
Reference: = Configuring Redundant Ethernet Interfaces, [Understanding Redundant Ethernet Interfaces]

NEW QUESTION # 72
Which two statements are correct about a policy scheduler? (Choose two.)

- A. A policy scheduler can be dynamically activated based on traffic flow volumes.
- B. A policy scheduler determines the time frame that a security policy is actively evaluated.
- C. A policy scheduler can only be applied when using the policy-rematch feature.
- D. A policy scheduler can be defined using a daily schedule.

Answer: B,D

Explanation:

A policy scheduler is a feature that allows a security policy to be activated or deactivated for a specified time period. You can define schedulers for a single or recurrent time slot within which a policy is active.

Two statements that are correct about a policy scheduler are:

A policy scheduler can be defined using a daily schedule: You can configure a scheduler to be active every day for a certain time interval, such as from 8:00 AM to 5:00 PM. You can also exclude specific days from the daily schedule, such as weekends or holidays.

A policy scheduler determines the time frame that a security policy is actively evaluated: When you associate a scheduler with a security policy, the policy is only available for policy lookup during the time frame specified by the scheduler. When the scheduler is off, the policy is inactive and cannot be matched by any traffic.

Reference: = Scheduling Security Policies, Configuring Schedulers for a Daily Schedule Excluding One Day

NEW QUESTION # 73

Your manager asks you to provide firewall and NAT services in a private cloud.

Which two solutions will fulfill the minimum requirements for this deployment? (Choose two.)

- A. a cSRX for firewall services and a separate cSRX for NAT services
- B. a single cSRX
- C. a single vSRX
- D. a vSRX for firewall services and a separate vSRX for NAT services

Answer: B,C

Explanation:

A single vSRX instance is capable of handling both firewall and NAT services simultaneously. This solution provides a streamlined and resource-efficient way to secure and manage network traffic within a private cloud environment.

Similar to the vSRX, a single cSRX can also provide both firewall and NAT services. The cSRX, being a containerized version of the SRX, is particularly suited for environments where high density and microservices architectures are used, offering high performance in a compact form factor.
