It demonstrates a thorough understanding of privacy laws and regulations, and an ability to effectively manage privacy risks and compliance within an organization. With the demand for privacy professionals on the rise, obtaining a CIPM Certification can help individuals advance in their careers and make valuable contributions to their organizations.

## IAPP Certified Information Privacy Manager (CIPM) Sample Questions (Q48-Q53):

### NEW QUESTION # 48

#### SCENARIO

Please use the following to answer the next QUESTION:

Penny has recently joined Ace Space, a company that sells homeware accessories online, as its new privacy officer. The company is based in California but thanks to some great publicity from a social media influencer last year, the company has received an influx of sales from the EU and has set up a regional office in Ireland to support this expansion. To become familiar with Ace Space's practices and assess what her privacy priorities will be, Penny has set up meetings with a number of colleagues to hear about the work that they have been doing and their compliance efforts.

Penny's colleague in Marketing is excited by the new sales and the company's plans, but is also concerned that Penny may curtail some of the growth opportunities he has planned. He tells her "I heard someone in the breakroom talking about some new privacy laws but I really don't think it affects us. We're just a small company. I mean we just sell accessories online, so what's the real risk?" He has also told her that he works with a number of small companies that help him get projects completed in a hurry. "We've got to meet our deadlines otherwise we lose money. I just sign the contracts and get Jim in finance to push through the payment. Reviewing the contracts takes time that we just don't have." In her meeting with a member of the IT team, Penny has learned that although Ace Space has taken a number of precautions to protect its website from malicious activity, it has not taken the same level of care of its physical files or internal infrastructure. Penny's colleague in IT has told her that a former employee lost an encrypted USB key with financial data on it when he left. The company nearly lost access to their customer database last year after they fell victim to a phishing attack. Penny is told by her IT colleague that the IT team

"didn't know what to do or who should do what. We hadn't been trained on it but we're a small team though, so it worked out OK in the end." Penny is concerned that these issues will compromise Ace Space's privacy and data protection.

Penny is aware that the company has solid plans to grow its international sales and will be working closely with the CEO to give the organization a data "shake up". Her mission is to cultivate a strong privacy culture within the company.

Penny has a meeting with Ace Space's CEO today and has been asked to give her first impressions and an overview of her next steps.

What is the best way for Penny to understand the location, classification and processing purpose of the personal data Ace Space has?

- A. Review all cloud contracts to identify the location of data servers used
- B. Conduct a Privacy Impact Assessment for the company
- C. Analyze the data inventory to map data flows
- D. Audit all vendors' privacy practices and safeguards

**Answer: C**

Explanation:

The best way for Penny to understand the location, classification and processing purpose of the personal data Ace Space has is to analyze the data inventory to map data flows. A data inventory is a comprehensive record of the personal data that an organization collects, stores, uses and shares. It helps to identify the sources, categories, locations, recipients and retention periods of personal data. A data flow map is a visual representation of how personal data flows within and outside an organization. It helps to identify the data transfers, processing activities, legal bases, risks and safeguards of personal data.

By analyzing the data inventory and mapping the data flows, Penny can gain a clear picture of the personal data lifecycle at Ace Space and identify any gaps or issues that need to be addressed. For example, she can determine whether Ace Space has a lawful basis for processing personal data of EU customers, whether it has adequate security measures to protect personal data from unauthorized access or loss, whether it has appropriate contracts with its vendors and cloud providers to ensure compliance with applicable laws and regulations, and whether it has mechanisms to respect the rights and preferences of its customers.

The other options are not the best way for Penny to understand the location, classification and processing purpose of the personal data Ace Space has. Auditing all vendors' privacy practices and safeguards (B) is an important step to ensure that Ace Space's third-party processors are complying with their contractual obligations and legal requirements, but it does not provide a comprehensive overview of Ace Space's own personal data processing activities. Conducting a Privacy Impact Assessment (PIA) for the company © is a useful tool to assess the privacy risks and impacts of a specific project or initiative involving personal data, but it does not provide a baseline understanding of the existing personal data landscape at Ace Space.

Reviewing all cloud contracts to identify the location of data servers used (D) is a relevant aspect of understanding the location of personal data, but it does not cover other aspects such as classification and processing purpose.

## NEW QUESTION # 50

### SCENARIO

Please use the following to answer the next QUESTION:

For 15 years, Albert has worked at Treasure Box - a mail order company in the United States (U.S.) that used to sell decorative candles around the world, but has recently decided to limit its shipments to customers in the 48 contiguous states. Despite his years of experience, Albert is often overlooked for managerial positions. His frustration about not being promoted, coupled with his recent interest in issues of privacy protection, have motivated Albert to be an agent of positive change.

He will soon interview for a newly advertised position, and during the interview, Albert plans on making executives aware of lapses in the company's privacy program. He feels certain he will be rewarded with a promotion for preventing negative consequences

resulting from the company's outdated policies and procedures.

For example, Albert has learned about the AICPA (American Institute of Certified Public Accountants)/CICA (Canadian Institute of Chartered Accountants) Privacy Maturity Model (PMM). Albert thinks the model is a useful way to measure Treasure Box's ability to protect personal data. Albert has noticed that Treasure Box fails to meet the requirements of the highest level of maturity of this model; at his interview, Albert will pledge to assist the company with meeting this level in order to provide customers with the most rigorous security available.

Albert does want to show a positive outlook during his interview. He intends to praise the company's commitment to the security of customer and employee personal data against external threats. However, Albert worries about the high turnover rate within the company, particularly in the area of direct phone marketing. He sees many unfamiliar faces every day who are hired to do the marketing, and he often hears complaints in the lunch room regarding long hours and low pay, as well as what seems to be flagrant disregard for company procedures.

In addition, Treasure Box has had two recent security incidents. The company has responded to the incidents with internal audits and updates to security safeguards. However, profits still seem to be affected and anecdotal evidence indicates that many people still harbor mistrust. Albert wants to help the company recover. He knows there is at least one incident the public is unaware of, although Albert does not know the details. He believes the company's insistence on keeping the incident a secret could be a further detriment to its reputation. One further way that Albert wants to help Treasure Box regain its stature is by creating a toll-free number for customers, as well as a more efficient procedure for responding to customer concerns by postal mail.

In addition to his suggestions for improvement, Albert believes that his knowledge of the company's recent business maneuvers will also impress the interviewers. For example, Albert is aware of the company's intention to acquire a medical supply company in the coming weeks.

With his forward thinking, Albert hopes to convince the managers who will be interviewing him that he is right for the job.

On which of the following topics does Albert most likely need additional knowledge?

- A. The requirements for a managerial position with privacy protection duties
- B. The possibility of delegating responsibilities related to privacy
- **C. The necessary maturity level of privacy programs**
- D. The role of privacy in retail companies

**Answer: C**

Explanation:

The topic that Albert most likely needs additional knowledge on is the necessary maturity level of privacy programs. Albert thinks that the AICPA/CICA Privacy Maturity Model (PMM) is a useful way to measure Treasure Box's ability to protect personal data, and that the company should aim to meet the highest level of maturity of this model. However, Albert may not realize that the PMM is not a prescriptive or definitive standard for privacy programs, but rather a descriptive and flexible tool for self-assessment and improvement. The PMM does not require or expect organizations to achieve the highest level of maturity for all privacy practices, as this may not be feasible, realistic, or appropriate for their specific context, objectives, and risks. The PMM recognizes that different levels of maturity may be suitable for different organizations or different aspects of their privacy programs, depending on their needs and circumstances. Therefore, Albert should not assume that the highest level of maturity is always the best or the most rigorous option for privacy protection. Albert should learn more about how to use the PMM effectively and appropriately, and how to determine the optimal level of maturity for Treasure Box's privacy program.

The other options are not topics that Albert most likely needs additional knowledge on. Albert seems to have a good understanding of the role of privacy in retail companies, as he is aware of the importance of protecting customer and employee personal data, as well as complying with relevant laws and regulations. Albert also seems to have a good understanding of the possibility of delegating responsibilities related to privacy, as he plans to assist the company with meeting its privacy obligations and goals. Albert also seems to have a good understanding of the requirements for a managerial position with privacy protection duties, as he intends to demonstrate his knowledge, skills, and experience in this area during his interview. ## **NEW QUESTION # 51**

### **SCENARIO**

Please use the following to answer the next question:

Paul Daniels, with years of experience as a CEO, is worried about his son Carlton's successful venture, Gadgo.

A technological innovator in the communication industry that quickly became profitable, Gadgo has moved beyond its startup phase.

While it has retained its vibrant energy, Paul fears that under Carlton's direction, the company may not be taking its risks or obligations as seriously as it needs to. Paul has hired you, a privacy Consultant, to assess the company and report to both father and son. "Carlton won't listen to me," Paul says,

"but he may pay attention to an expert."

Gadgo's workplace is a clubhouse for innovation, with games, toys, snacks, espresso machines, giant fish tanks and even an iguana who regards you with little interest. Carlton, too, seems bored as he describes to you the company's procedures and technologies

- A. A supplier audit
- B. An internal audit
- C. A third-party audit
- D. A self-certification

- A. Determine access controls.
- B. Assess vendor risk.
- C. Comply with contractual requirements.
- D. Map data flows.
