New Salesforce Analytics-DA-201 Exam Experience | Valid Analytics-DA-201 Exam Notes

Nowadays, the Analytics-DA-201 certificate is popular among job seekers. After all, the enormous companies attach great importance to your skills. If you can obtain the Analytics-DA-201 certificate, you will have the greatest chance to get the job. So you need to improve yourself during your spare time. Maybe you are always worrying that you are too busy to prepare for an exam, but our Analytics-DA-201 Training Materials will help you obtain the certification in the least time for the advantage of high-efficiency.

Salesforce Certified Tableau Data Analyst Sample Questions (Q50-Q55):

NEW QUESTION # 50

You conned to a Microsoft SQL Server database

You need to create a custom SQL query that retrieves rows from a table named Students Only students in the city of Berlin must be returned How should you complete the query? (Drag the appropriate Options to the Answer Area and drop into the correct locations.)

□

Answer:

Explanation:

□

Explanation:

Select

Where

The correct way to complete the query is:

```
SELECT * FROM [dbo].[Students]
```

```
WHERE [Students].[City] = 'Berlin'
```

The SELECT statement is used to retrieve data from a table or a view. The * symbol means that all columns will be returned. The FROM clause specifies the table or view name and the schema name.

The WHERE clause is used to filter the data based on a condition. The condition is [Students].[City] =

'Berlin', which means that only rows where the City column of the Students table is equal to 'Berlin' will be returned.

The other options are not relevant for this query. CAST is a function that converts a value from one data type to another. JOIN is a clause that combines data from two or more tables based on a common field. ON is a keyword that specifies the join condition.

UNION is a set operation that combines the results of two or more queries into one result set.

NEW QUESTION # 51

You have a line chart on a worksheet.

You want to add a comment to March 2020 as shown in the following visualization.

What should you do?

- A. Add a tooltip
- B. Drag the growth rate to Text on the Marks card
- C. Annotate March 2020
- D. Enable captions

Answer: C

Explanation:

To add a comment to March 2020 on a line chart, you need to annotate that mark. You can right-click on the mark and select Annotate > Mark from the menu. This will open a dialog box where you can type your comment and format it as you like. You can also drag and drop the annotation to position it on the worksheet.

Dragging the growth rate to Text on the Marks card will add a label to every mark on the line chart, enabling captions will show a description of the worksheet at the bottom, and adding a tooltip will show a text box when users hover over a mark. References:

<https://help.tableau.com/current/pro/desktop/en-us>

[/formatting_annotaions.htm](https://help.tableau.com/current/pro/desktop/en-us/formatting_annotaions.htm) [https://help.tableau.com/current/pro/desktop/en-us](https://help.tableau.com/current/pro/desktop/en-us/formatting_annotaions_create.htm)

[/formatting_annotaions_create.htm](https://help.tableau.com/current/pro/desktop/en-us/formatting_annotaions_create.htm)

To add a comment to a specific point on a line chart, such as March 2020 in the provided visualization, you would use the 'Annotate' feature. Right-clicking on the data point for March 2020 and selecting 'Annotate' allows you to add a text annotation directly to the chart, which can be used to highlight and comment on that particular data point.

NEW QUESTION # 52

How are the colors configured for the map?

- A. A diverging color palette that has six stepped colors
- **B. A diverging color palette that has five stepped colors**
- C. A sequential color gradient
- D. A single color gradient

Answer: B

NEW QUESTION # 53

You have the following dataset.

Which formula calculates the percent difference in sales relative to the same quarter the previous year as shown in the Calculation field?

- A. $(ZN(SUM([Sales])) - LOOKUP(ZN(SUM([Sales])), -4))$
- B. $(SUM([Sales]) - LOOKUP(SUM([Sales]), -4))$
- C. $(SUM([Sales]) / (LOOKUP(SUM([Sales]), -4))$
- **D. $(SUM([Sales]) - LOOKUP(SUM([Sales]), -4)) / (LOOKUP(SUM([Sales]), -4))$**

Answer: D

Explanation:

The formula in option B calculates the percent difference in sales relative to the same quarter the previous year. It subtracts the sales of the same quarter from the previous year from the current year's sales, and then divides this by the previous year's sales. This gives a percentage change, which aligns with what is shown in the Calculation field of your dataset. The LOOKUP function returns the value of a specified offset from the current row in the partition. In this case, the offset is -4, which means the value of the same measure four rows above the current row. This corresponds to the same quarter of the previous year, assuming the data is sorted by quarter. References:

NEW QUESTION # 54

When should a Data Analyst use a Treemap in Tableau?

- A. To show the correlation between two continuous variables
- **B. To display hierarchical data with nested categories**
- C. To analyze the distribution of a measure over time
- D. To visualize the change in a measure across different regions in a map

Answer: B

NEW QUESTION # 55

.....

To keep with such an era, when new knowledge is emerging, you need to pursue latest news and grasp the direction of entire development tendency, our Analytics-DA-201 training questions have been constantly improving our performance. Our working staff regards checking update of our Analytics-DA-201 preparation exam as a daily routine. After you purchase our Analytics-DA-201 Study Materials, we will provide one-year free update for you. Within one year, we will send the latest version to your mailbox with no charge if we have a new version of Analytics-DA-201 learning materials.
