問題 #647

A user installs a GPU and notices the screen resolution and picture quality are much lower than before the installation. Which of the following is most likely the cause of the issue?

- A. The user failed to install the appropriate OEM drivers.
- B. The computer does not have a supported OS installed.
- C. The computer does not have enough RAM installed to support the GPU.
- D. The GPU is not compatible with the user's motherboard.

答案：A

解題說明：

When a new GPU is installed and results in lower screen resolution and picture quality, it's often because the appropriate OEM (Original Equipment Manufacturer) drivers for the GPU have not been installed. Without these drivers, the operating system may revert to generic drivers that do not fully support the GPU's capabilities, leading to suboptimal performance. Installing the correct OEM drivers should resolve the issue and allow the GPU to function at its intended performance level.

問題 #648

Which of the following standards supports MIMO technology?

- A. 802.11n
- B. 802.11b
- C. 802.11a
- D. 802.11g

答案：A

解題說明：

802.11n (Wifi 4) supports MIMO (Multiple In Multiple Out) and 802.11 ac and ax (Wifi 5 and 6) supports MU-MIMO.

問題 #649

A user called the help desk to request assistance with selecting appropriate storage to back up a large collection of DVDs and photos in the most economical way. Which of the following should the help desk recommend?

- A. SAS RAID array
- B. 5,400rpm HDD
- C. Optical media
- D. M.2 NVMe SSD

答案： C

解題說明：

Optical media, such as CDs, DVDs, or Blu-ray discs, are a suitable choice for backing up a large collection of DVDs and photos in the most economical way. Optical media are inexpensive, widely available, and have a long shelf life. They can store large amounts of data, up to 50GB on a dual-layer Blu-ray disc, and can be easily labeled and organized. Optical media are also less prone to mechanical failure, data corruption, or accidental deletion than hard disk drives (HDDs) or solid state drives (SSDs).

The other options are not as economical or suitable for this purpose. A 5,400rpm HDD is a slow and noisy type of HDD that has moving parts that can wear out or break. A HDD also consumes more power and generates more heat than an SSD. A M.2 NVMe SSD is a fast and compact type of SSD that uses a PCIe interface to transfer data. However, an SSD is more expensive than an HDD or optical media, and has a limited number of write cycles before it degrades. A SAS RAID array is a complex and costly system that uses multiple HDDs or SSDs connected by a Serial Attached SCSI (SAS) interface to provide redundancy, performance, or both. A RAID array requires a RAID controller, a compatible motherboard, and a dedicated power supply.

問題 #650

A technician is mitigating threats to web clusters. Which of the following tools is the most appropriate for a technician to use to mitigate unwanted traffic against the web clusters' public-facing interface?

- A. Physical firewall
- B. Intrusion detection system
- C. Device encryption
- D. Antivirus/anti-malware

答案： A

解題說明：

A physical firewall is a hardware device that filters and blocks unwanted or malicious traffic from entering or leaving a network. A physical firewall can be configured with rules and policies to allow or deny traffic based on various criteria, such as source and destination IP addresses, ports, protocols, applications, etc. A physical firewall can also provide logging and monitoring capabilities to detect and prevent network attacks.

問題 #651

A user in a medical office contacts a technician regarding a printer that is used to print A4-sized labels. After the labels are printed, they mistakenly contain white space in the middle of the page. Which of the following would MOST likely be the cause?

- A. A misfeed
- B. Page orientation
- C. Contaminated fuser
- D. Worn rollers

答案：B

解題說明：

Explanation

The most likely cause of the issue is that the page orientation is incorrect. The printer may be set to print labels in a different orientation than the orientation of the label sheet.
