Best JN0-105 Study Material | JN0-105 Reliable Test Pdf

People who want to pass the exam have difficulty in choosing the suitable JN0-105 study materials. They do not know which study materials are suitable for them, and they do not know which the study materials are best. Our company can promise that the JN0-105 Study Materials from our company are best among global market. As is known to us, the JN0-105 study materials from our company are the leading practice materials in this dynamic market.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q61-Q66):

NEW QUESTION # 61

You are asked to configure your device running Junos OS to automatically archive your configuration upon commit. In this scenario, which two methods are supported by the Junos OS? (Choose two)

- A. RCP
- B. FTP
- C. HTTP
- D. SCP

Answer: A,D

Explanation:

Junos OS supports multiple methods for automatically archiving configurations upon commit. Two of the supported methods are SCP (Secure Copy Protocol) and RCP (Remote Copy Protocol). These methods can be configured to save the configuration files to a remote server automatically whenever a commit is made.

NEW QUESTION # 62

Exhibit

```
term limit-icmp { from {
source-address {
172.25.11.0/24;
}
protocol icmp;
}
then {
count count-icmp; discard;
}
}
```

Referring to the exhibit, which two actions will occur when a packet matches the firewall filter? (Choose two.)

- A. An ICMP destination unreachable message will be returned.
- B. A counter will be incremented.
- C. The packet will be forwarded.
- D. The packet will be discarded.

Answer: D

Explanation:

Referring to the firewall filter configuration in the exhibit, when a packet matches the specified term limit-icmp, two actions are defined in the then statement: count count-icmp and discard. The count count-icmp action means that each time a packet matches this term, a counter named count-icmp will be incremented, providing a tally of how many packets have matched the term. The discard action means that the packet will be dropped and not forwarded through the device. This effectively prevents the packet from reaching its intended destination. There is no action specified that would cause an ICMP destination unreachable message to be

returned, nor is there any action that would allow the packet to be forwarded.

NEW QUESTION # 63

Which process in the Junos OS is responsible for device management tasks including the CLI and commit operations?

- A. chassisd
- B. dcd
- C. rpd
- D. mgd

Answer: D

Explanation:

In Junos OS, the management daemon (mgd) is responsible for handling all the device management tasks, including processing CLI commands and handling commit operations. The mgd daemon interacts with the Junos OS configuration database and provides the necessary logic to ensure that configuration changes are syntactically correct and do not conflict with each other. When a user commits a configuration, mgd validates the changes, applies them to the running configuration, and ensures that the necessary daemons are notified of the changes to apply them accordingly.

NEW QUESTION # 64

How many login classes are assignable to a user account?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

<https://www.juniper.net/documentation/us/en/software/junos/user-access-evo/user-access/topics/topic-map/junos-os-login-class.html#:~:text=You%20can%20define%20any%20number,to%20an%20individual%20user%20account.>

In Junos OS, each user account can be assigned only one login class. Login classes in Junos OS define the permissions for users, controlling what they can access and modify within the system. This setup helps in maintaining a clear and secure access control mechanism.

NEW QUESTION # 65

How many login classes are assignable to a user account?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

Junos OS supports multiple login classes that can be assigned to user accounts, allowing for different levels of access and permissions. The correct answer is C, 4. These classes include "super-user," "read-only," "operator," and "unauthorized." Each class provides a different level of access to the Junos device, ranging from full configuration and operational command privileges to limited access for monitoring and viewing configurations.
