ChromeOS-Administrator Tests, ChromeOS-Administrator Zertifizierung

Unsere Schulungsunterlagen können Ihre Kenntnisse vor der Google ChromeOS-Administrator Prüfung testen und auch Ihr Verhalten in einer bestimmten Zeit bewerten. Wir geben Ihnen Anleitung zu Ihrer Note und Schwachpunkt, so dass Sie Ihre Schwäche nachholen können. Die Lernhilfe zur Google ChromeOS-Administrator Zertifizierungsprüfung von DeutschPrüfung stellen Ihnen unterschiedliche logische Themen vor. So können Sie nicht nur lernen, sondern auch andere Techniken und Subjekte kennen lernen. Wir versprechen, dass unsere Google ChromeOS-Administrator Schulungsunterlagen von der Praxis bewährt werden. DeutschPrüfung hat genügende Vorbereitung für Ihre Prüfung getroffen. Unsere Fragen sind umfassend und der Preis ist rational.

Google Professional ChromeOS Administrator Exam ChromeOS-

Administrator Prüfungsfragen mit Lösungen (Q110-Q115):

110. Frage

You want to restrict who can sign in to a managed device during working hours. Which two settings do you need to use?
Choose 2 answers

- A. Device off hours
- B. User Data (Ephemera))
- C. Family Link accounts
- D. Single sign-on IdP redirection

Antwort: A,C

Begründung:

* Device off hours: This setting allows you to specify times when the device cannot be used, effectively restricting access to certain hours.

* Family Link accounts: Family Link is a parental control app that allows you to manage a child's account and device usage. By requiring Family Link accounts, you can enforce sign-in restrictions for younger users.

Other options are incorrect because:

* A: Single sign-on (SSO) redirection simplifies sign-in for authorized users, but doesn't inherently restrict access.

* C: User Data (Ephemeral) controls whether user data is saved locally, but doesn't restrict sign-in.

111. Frage

Your company's network team reports Wi-Fi issues with certain ChromeOS devices. To troubleshoot, you will reproduce the problem but also need to collect network logs. How are you going to proceed?

- A. From chrome://network, use the "Network Logs" tab, select the "Wi-Fi debug" mode, open a new tab and reproduce the issue. Once completed, go back to the original tab, then export the "system_logs.txt" file and all log files collected by debugd
- B. From chrome://network, use the "Network Logs" tab and select the policies.json, all logs files collected by debugd, and all Chrome log files
- C. From the Chrome Browser, use the "chrome://system" page and check the "wifi_status_no_anonymize" attribute
- D. From chrome://network, use the "Network Logs" tab, select the "Wi-fi debug" mode, then export the "system_logs.txt" file and all log files collected by debugd

Antwort: A

Begründung:

To accurately troubleshoot Wi-Fi issues, it is essential to enable Wi-Fi debug mode, reproduce the problem, and then export the logs. This method ensures that the logs contain relevant data about the issue, as capturing logs before reproducing the issue might miss critical information.

Verified Answer from Official Source:

The correct answer is verified from the ChromeOS Network Troubleshooting Guide, which advises collecting logs only after the issue has been replicated.

"To troubleshoot network issues on ChromeOS, use chrome://network and enable Wi-Fi debug mode.

Reproduce the problem before exporting the system_logs.txt file for accurate diagnosis." By reproducing the problem before collecting logs, you ensure that the captured data accurately reflects the issue, making it easier to identify root causes.

Objectives:

- * Troubleshoot network connectivity on ChromeOS.
- * Collect accurate log data for analysis.

112. Frage

How do you validate Chrome policies on a managed device?

- A. In the browser, go to chrome://policy to confirm that the device is receiving both user and device policy
- B. In the browser, go to policy://chrome to confirm that the device is receiving both user and device policy
- C. Go to the admin console and look up the policies

- D. Download device logs

Antwort: A

Begründung:

To check which policies are applied to a ChromeOS device, navigate to `chrome://policy` in the Chrome browser. This page displays a list of all policies applied to the device, including both user-specific and device-specific policies. This is the most accurate way to verify that the device is receiving the correct policies from the Google Admin console.

Verified Answer from Official Source:

The correct answer is verified from the Google Chrome Enterprise Policy Guide, which recommends using the `chrome://policy` URL to review current policy settings on a device.

"To see the policies applied to a ChromeOS device, open Chrome and go to `chrome://policy`. This page lists both user and device policies that are currently enforced." This method allows administrators to validate the application of policies directly on the device, confirming that updates from the Admin console have been successfully applied.

Objectives:

- * Validate policy application on managed ChromeOS devices.
- * Use `chrome://policy` to troubleshoot policy issues.

113. Frage

How would you deploy your "Terms of Services" page to all managed ChromeOS devices?

- A. Navigate to "Chrome Verified Access" and enable the policy for content protection
- B. Navigate to "User & Browser" and "Managed Guest Session" settings to upload your custom avatar
- C. Go to "User & Browser" and "Managed Guest Session" settings to upload your terms of service
- D. In "User & Browser Settings" upload the "Terms of Service" as a wallpaper

Antwort: C

Begründung:

- * Go to the Google Admin console.
- * Navigate to "Device Management" > "Chrome Management" > "User & browser settings".
- * Find the section for "Managed Guest Session".
- * Locate the setting for "Terms of Service".
- * Upload your "Terms of Service" document in plain text format.

This will present your Terms of Service to users when they log in as a guest on any managed ChromeOS device.

Why other options are incorrect:

- * A. Chrome Verified Access: This is for controlling access to corporate resources, not displaying terms of service.
- * C. Wallpaper: Using the wallpaper to display terms of service is not practical or user-friendly.
- * D. Custom avatar: The avatar is for user personalization and not related to terms of service.

114. Frage

You want users to sign in to Chrome devices via SAML and be able to access SAML-enabled web applications without having to re-enter their credentials. How should you configure SAML?

- A. Enable SAML identity provider-initiated login for Google Authentication
- B. Use Chrome App Builder to enable SSO for each application and force-install the applications using Chrome user policies
- C. Enable SAML-based Single Sign-On for each application via Chrome App Management
- D. Enable SAML-based Single Sign-On for Chrome devices and Single Sign-On Cookie Behavior

Antwort: D

Begründung:

To allow seamless SSO across Chrome devices and SAML-enabled web applications, you should enable SAML-based Single Sign-On (SSO) for Chrome devices and configure Single Sign-On Cookie Behavior.

This ensures that once users log in via SAML, they will not be prompted to re-authenticate when accessing SAML-integrated applications.

Verified Answer from Official Source:

The correct answer is verified from the Google Workspace SSO Configuration Guide, which explains how enabling SSO cookie behavior maintains authenticated sessions across multiple applications.
