## SPLK-1002 Questions Pdf & New SPLK-1002 Test Online

By unremitting effort to improve the accuracy and being studious of the SPLK-1002 real questions all these years, our experts remain unpretentious attitude towards our SPLK-1002 practice materials all the time. They are unsuspecting experts who you can count on. Without unintelligible content within our SPLK-1002 Study Tool, all questions of the exam are based on their professional experience in this industry. Besides, they made three versions for your reference, the PDF, APP and Online software version.

Splunk SPLK-1002 exam is designed for individuals who want to demonstrate their expertise in using Splunk Core. Splunk Core Certified Power User Exam certification exam is intended for professionals who manage large and complex Splunk environments, and have a deep understanding of SPL commands, field extraction, data models, and data normalization. The SPLK-1002 Exam is a great way to showcase your Splunk skills and enhance your credibility in the industry.

## Splunk Core Certified Power User Exam Sample Questions (Q307-Q312):

### NEW QUESTION # 307

If a calculated field has the same name as an extracted field, what happens to the extracted field?

- A. The calculated field will duplicate the extracted field.
- B. An error will be returned and the search will fail.
- C. The calculated and extracted fields will be combined.
- D. The calculated field will override the extracted field.

**Answer: D**

Explanation:

When you define a calculated field, you can specify the name of the field that the eval expression will create or modify. If the name of the calculated field matches the name of an existing extracted field, the calculated field will override the extracted field and replace its value with the result of the eval expression. This means that the original value of the extracted field will not be available for searching or analysis. To avoid this, you should use a unique name for your calculated field or use a different name for your extracted field.

### NEW QUESTION # 308

Which of the following can be saved as an event type?

- A. `index=server_48 sourcetype=BETA_881 code=220 | inputlookup append=t servercode.csv`
- B. `index=server_48 sourcetype=BETA_881 code=220 | stats count by code`
- C. `index=server_48 sourcetype=BETA_881 code=220 | stats where code > 220`
- D. `index=server_48 sourcetype=BETA_881 code=220`

**Answer: D**

Explanation:

An event type is a classification of events based on a search query, which allows for a static set of search criteria. In this case, option A (`index=server_48 sourcetype=BETA_881 code=220`) represents a simple search without transforming commands (e.g., `stats`, `inputlookup`). Event types cannot include transforming commands such as `stats` or `lookup`.

Splunk Documentation - Event Types

### NEW QUESTION # 309

Which of the following statements describes POST workflow actions?

- A. POST workflow actions cannot be created on custom sourcetypes.
- B. POST workflow actions cannot use field values in their URI.
- C. POST workflow actions are always encrypted.
- D. POST workflow actions can open a web page in either the same window or a new window.

**Answer: D**

Explanation:

A workflow action is a link that appears when you click an event field value in your search results. A workflow action can open a web page or run another search based on the field value. There are two types of workflow actions: GET and POST. A GET workflow action appends the field value to the end of a URI and opens it in a web browser. A POST workflow action sends the field value as part of an HTTP request to a web server. You can configure a workflow action to open a web page in either the same window or a new window. Therefore, option D is correct, while options A, B and C are incorrect.

### NEW QUESTION # 310

Calculated fields can be based on which of the following?

- A. Extracted fields
- B. Fields generated from a search string
- C. Output fields for a lookup
- D. Tags

Answer: A

### NEW QUESTION # 311

What does the following search do?

```
index=corndog type=mysterymeat action=eaten | stats count as corndog_count by user
```

- A. Creates a table with the count of all types of corndogs eaten split by user.
- B. Creates a table that groups the total number of users by vegetarian corndogs.
- C. Creates a table of the total count of users and split by corndogs.
- D. Creates a table of the total count of mysterymeat corndogs split by user.

Answer: D

Explanation:

The search string below creates a table of the total count of mysterymeat corndogs split by user.

| stats count by user | where corndog=mysterymeat

The search string does the following:

It uses the stats command to calculate the count of events for each value of the user field. The stats command creates a table with two columns: user and count.

It uses the where command to filter the results by the value of the corndog field. The where command only keeps the rows where corndog equals mysterymeat.

Therefore, the search string creates a table of the total count of mysterymeat corndogs split by user.

### NEW QUESTION # 312

.....

Our company has successfully launched the new version of the SPLK-1002 study materials. Perhaps you are deeply bothered by preparing the exam. Now, you can totally feel relaxed with the assistance of our study materials. Our products are reliable and excellent. What is more, the passing rate of our SPLK-1002 Study Materials is the highest in the market. Purchasing our SPLK-1002 study materials means you have been half success. Good decision is of great significance if you want to pass the exam for the first time.
