

Microsoft AZ-104測試題庫|驚人通過率的考試材料 & AZ-104: Microsoft Azure Administrator

P.S. Fast2test在Google Drive上分享了免費的、最新的AZ-104考試題庫：https://drive.google.com/open?id=1UwlcodffHkFdjNpTwOuCusr7t_PCTDTsN

Fast2test提供有保證的題庫資料，以提高您的Microsoft AZ-104考試的通過率，您可以認識到我們產品的真正價值。如果您想參加AZ-104考試，請選擇我們最新的AZ-104題庫資料，該題庫資料具有針對性，不僅品質是最高的，而且內容是最全面的。對於那些沒有充分的時間準備考試的考生來說，Microsoft AZ-104考古題就是您唯一的、也是最好的選擇，這是一個高效率的學習資料，AZ-104可以讓您在短時間內為考試做好充分的準備。

Microsoft Azure Administrator 認證考試是 IT 專業人員驗證其 Azure 管理技能的絕佳機會。該認證可幫助他們提升職業生涯，並認可他們在 Azure 服務方面的專業知識。隨著對熟練 Azure 管理員的需求增加，AZ-104 認證對於任何想要從事雲技術領域的 IT 專業人士都是有價值的資產。

微軟AZ-104考試旨在測試專業人士在微軟Azure管理方面的專業知識。該考試評估候選人管理Azure訂閱、安全管理存儲解決方案、部署和管理虛擬機器、配置和管理虛擬網絡以及管理身份的能力。通過此認證考試確認候選人具有執行關鍵Azure管理任務的技能和知識。

AZ-104參考資料 & AZ-104學習筆記

Fast2test 考題大師的 AZ-104 權威考試考古題軟體是 Microsoft 證照廠商的授權產品，AZ-104 試題都是考試原題的完美組合，覆蓋率95%以上，答案由多位專業資深講師原版破解得出，正確率100%。提供2種 Microsoft AZ-104 考題大師版本供你選擇，分別是軟體版本 AZ-104 考試考古題和PDF 格式 AZ-104 考試考古題。

該考試針對有使用 Azure 技術和服務經驗的專業人士設計。它非常適合 IT 專業人員、系統管理員和開發人員驗證他們在 Azure 管理方面的知識和技能。此外，該考試對於那些希望增強職業前景和推進職業發展的人也非常有價值。

最新的 Microsoft Azure Administrator Associate AZ-104 免費考試真題 (Q188-Q193):

問題 #188

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure subscription that contains 10 virtual networks. The virtual networks are hosted in separate resource groups.

Another administrator plans to create several network security groups (NSGs) in the subscription.

You need to ensure that when an NSG is created, it automatically blocks TCP port 8080 between the virtual networks.

Solution: You create a resource lock, and then you assign the lock to the subscription.

Does this meet the goal?

- A. No
- B. Yes

答案: A

解題說明:

No, this does not meet the goal. Creating a resource lock and assigning it to the subscription is not enough to ensure that when an NSG is created, it automatically blocks TCP port 8080 between the virtual networks. This is because a resource lock does not affect the configuration or functionality of a resource, but only prevents it from being deleted or modified¹. A resource lock does not apply any security rules to an NSG or a virtual network.

To meet the goal, you need to create a custom policy definition that enforces a default security rule for NSGs. A policy definition is a set of rules and actions that Azure performs when evaluating your resources².

You can use a policy definition to specify the required properties and values for NSGs, such as the direction, protocol, source, destination, and port of the security rule. You can then assign the policy definition to the subscription scope, so that it applies to all the resource groups and virtual networks in the subscription.

問題 #189

You need to configure Azure Backup to back up the file shares and virtual machines.

What is the minimum number of Recovery Services vaults and backup policies you should create? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

答案:

解題說明:

Explanation:

<https://learn.microsoft.com/en-us/azure/backup/backup-azure-files?tabs=backup-center>

<https://learn.microsoft.com/en-us/azure/backup/backup-azure-vms-first-look-arm#back-up-from-azure-vm- settings>

問題 #190

You have a hybrid deployment of Azure AD that contains the users shown in the following table.

You need to modify the JobTitle and UsageLocation attributes for the users.

For which users can you modify the attributes from Azure AD? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

答案:

解題說明:

問題 #191

You have an Azure virtual machine named VM1 that connects to a virtual network named VNet1. VM1 has the following configurations:

- * Subnet: 10.0.0/24
- * Availability set: AVSet
- * Network security group (NSG): None
- * Private IP address: 10.0.0.4 (dynamic)
- * Public IP address: 40.90.219.6 (dynamic)

You deploy a standard, Internet-facing load balancer named slb1.

You need to configure slb1 to allow connectivity to VM1.

Which changes should you apply to VM1 as you configure slb1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

答案:

解題說明:

Explanation:

Box 1: Remove the public IP address from VM1

If the Public IP on VM1 is set to Dynamic, that means it is a Public IP with Basic SKU because Public IPs with Standard SKU have Static assignments by default, that cannot be changed. We cannot associate Basic SKUs IPs with Standard SKUs LBs. One cannot create a backend SLB pool if the VM to be associated has a Public IP. For Private IP it doesn't matter whether it is dynamic or static, still we can add the such VM into the SLB backend pool.

Box 2: Create and configure an NSG

Standard Load Balancer is built on the zero trust network security model at its core. Standard Load Balancer secure by default and is part of your virtual network. The virtual network is a private and isolated network.

This means Standard Load Balancers and Standard Public IP addresses are closed to inbound flows unless opened by Network Security Groups. NSGs are used to explicitly permit allowed traffic. If you do not have an NSG on a subnet or NIC of your virtual machine resource, traffic is not allowed to reach this resource. To learn more about NSGs and how to apply them for your scenario, see Network Security Groups. Basic Load Balancer is open to the internet by default.

<https://docs.microsoft.com/en-us/azure/load-balancer/load-balancer-overview>

問題 #192

You have an Azure subscription. The subscription contains a storage account named storage1 that has the lifecycle management rules shown in the following table.

On June 1, you store a blob named File1 in the Hot access tier of storage1. What is the state of File1 on June 7?

- A. stored in the Hot access tier
- B. stored in the Cool access tier
- C. stored in the Archive access tier
- D. deleted

答案: D

解題說明:

If you define more than one action on the same blob, lifecycle management applies the least expensive action to the blob. For example, action delete is cheaper than action tierToArchive. Action tierToArchive is cheaper than action tierToCool.
