They can also use this certification to advance their careers and take on more challenging product owner roles.

Scrum Professional Scrum Product Owner II Sample Questions (Q48-Q53):

NEW QUESTION # 48

You have been a Product Owner at a new company for a few weeks. It has become clear to you that many people, both inside and outside the Scrum Team, expect close involvement in the decisions that you, as a Product Owner, are accountable for. As a result, you find that it takes too long to make decisions. Which of the following are reasonable options you could take? (choose the best three answers)

- A. Start making all the decisions without consulting the others who have expressed interest.
- B. Demonstrate, with the help of data, how long it is taking you to make decisions and the impact that the long decision-making cycle has on delivering value to the customer.
- C. Create and share a delegation board that displays your decision-making areas and work with your Scrum Team to clarify decision making accountability and responsibility.
- D. Work with your Scrum Master to better understand what next steps you can take to move the company's understanding of product ownership up in the maturity curve towards Entrepreneur.
- E. Allow other members of the Scrum Team and stakeholders to continue making decisions they are not accountable for; documenting which decisions do not deliver the intended value.

Answer: B,C,D

Explanation:

Explanation

As a Product Owner, you are responsible for making decisions that maximize the value of the product and align with the product vision and strategy. However, you also need to collaborate with the Scrum Team and the stakeholders, and respect their input and feedback. Making decisions without consulting them or allowing them to make decisions they are not accountable for can lead to confusion, conflict, and waste. Therefore, options A and B are not reasonable.

Option C is a reasonable option because it helps you communicate your decision-making areas and delegate some decisions to the appropriate level of the organization. A delegation board is a tool that shows who has the authority to make which decisions, and how much involvement is expected from others. By creating and sharing a delegation board, you can clarify your role as a Product Owner, empower the Scrum Team and the stakeholders, and reduce the time and effort spent on decision making.

Option D is also a reasonable option because it helps you improve the company's culture and mindset towards product ownership. As a Product Owner, you need to act as an entrepreneur, who is able to innovate, experiment, and validate assumptions. However, not all organizations are ready to support this kind of product ownership, and some may have a more traditional or bureaucratic approach. Working with your Scrum Master, you can identify the gaps and barriers that prevent you from being an effective Product Owner, and take steps to overcome them. For example, you can educate and coach the organization on the benefits of agile product management, create a shared product vision and roadmap, and foster a culture of trust and transparency.

Option E is another reasonable option because it helps you demonstrate the value of your decisions and the cost of delay. As a Product Owner, you need to use data and evidence to support your decisions and measure their impact. By showing how long it is taking you to make decisions and how that affects the delivery of value to the customer, you can justify your choices and persuade others to support them. You can also use data to identify the most important and urgent decisions, and prioritize them accordingly. This way, you can avoid analysis paralysis and focus on delivering value faster and more frequently.

NEW QUESTION # 49

An organization is currently having difficulties delivering new releases of their products in a timely manner. When asked, the teams say that they need to share team members across different teams and products in order for a team to get their work done. At least one team needs help from a member of another team at any point in time.

Which of the following would be the most appropriate response? (choose the best answer)

- A. Work with HR to hire more people to increase the capacity of the teams.
- B. All of the above.
- C. Reduce the number of products in order to help improve focus and reduce dependencies between teams.
- D. Create project plans for each of the products to include how to coordinate between teams and team members.
- E. None of the above.

Answer: C

NEW QUESTION # 50

The Developers have the final say on when to release an increment. (choose the best answer)

- A. False. The Product Owner decides when it is best to release.
- B. True. The Developers deploy to production when the increment is shippable.
- C. True. The Developers are accountable for doing the work and owning the release process.
- D. False. The increment is released after it has passed UAT.

Answer: A

NEW QUESTION # 51

When the Product Owner is too busy to work with all of the teams in a multi-team product development effort, which strategy will help them?

(choose the best answer)

- A. Add component team Product Owners.
- B. All of the above.
- C. Assign sub-Product Owners to each Scrum Team.
- D. Communicate a clear Product Goal and delegate some activities to the Developers.
- E. Enlist the Program Management Office to help coordinate work.

Answer: D

Explanation:

The Product Owner is accountable for maximizing the value of the product resulting from the work of the Scrum Team. They are also accountable for effective Product Backlog management, which includes clearly expressing Product Backlog items, ordering them to best achieve goals and missions, ensuring that the Product Backlog is transparent, visible and understood. The Product Owner may do the above work or may delegate the responsibility to others. However, the Product Owner remains accountable¹. When working with multiple Scrum Teams on the same product, the Product Owner should ensure that there is a shared understanding of the Product Goal among all the teams and stakeholders. The Product Goal is the long-term objective for the Scrum Team. They must fulfill (or abandon) one objective before taking on the next². The Product Owner should also collaborate with the Developers to create and refine Product Backlog items that are valuable, feasible, and testable. The Developers are accountable for creating a plan for the Sprint, the Sprint Backlog¹. The Product Owner should trust the Developers to self-organize and deliver the most valuable increments possible.

The other options are not recommended strategies for the Product Owner, as they may introduce unnecessary complexity, confusion, and waste. Adding component team Product Owners, enlisting the Program Management Office, or assigning sub-Product Owners may create silos, dependencies, and conflicts among the teams and stakeholders. These roles may also undermine the authority and accountability of the Product Owner, and reduce the transparency and alignment of the Product Backlog. The Product Owner should work with the Scrum Master and the Developers to find ways to optimize the value delivery and collaboration across the teams, rather than creating intermediaries or proxies³⁴. NEW QUESTION # 52

Tommy, a young and talented Product Owner, decided to release continuously new features. He supposed that more frequent releases increase the quality of the value.

What could be the potential problems with his releasing strategy? (choose ALL that apply).

- A. The stakeholders are unhappy because the budget is consumed too quickly
- B. There is no problem with Tommy's releasing strategy.
