CompTIA DataSys+ Certification Exam Sample Questions (Q81-Q86):

NEW QUESTION # 81
Which of the following is the best way to migrate a large data load from one table to another, considering total time and blocking?

- A. Batch large loads into one transaction.
- B. Split the load size in half and run simultaneously.
- C. Batch into small loads and run in parallel.
- D. Split the load size into many transactions.

Answer: C

Explanation:
The best way to migrate a large data load from one table to another, considering total time and blocking, is to batch into small loads and run in parallel. This means that the large data load is divided into smaller chunks that can be processed simultaneously by multiple threads or processes. This reduces the total time required for the migration and also minimizes the blocking of other operations on the tables involved. The other options are either less efficient or more prone to blocking. For example, splitting the load size into many transactions may increase the overhead and latency of each transaction; splitting the load size in half and running simultaneously may still cause blocking or contention; batching large loads into one transaction may take longer and lock the tables for longer periods. NEW QUESTION # 82
A database administrator wants to remove inactive customers from a database. Which of the following statements should the administrator use?

- A. □
- B. □
- C. □
- D. □

Answer: B

Explanation:
The statement that the administrator should use to remove inactive customers from a database is option A.
This statement uses the DELETE command to delete all the rows from the customer table where the status column is equal to 'inactive'. The other options either have syntax errors, use incorrect commands, or do not specify the condition correctly.

NEW QUESTION # 83
Which of the following scripts would set the database recovery model for sys.database?

- A. □
- B. □
- C. □
- D. □

Answer: A

Explanation:
The script that would set the database recovery model for sys.database is option A. This script uses the ALTER DATABASE statement to modify the recovery model of the sys.database to full with no wait. The other options either have syntax errors, use incorrect keywords, or do not specify the recovery model correctly.

NEW QUESTION # 84
A database administrator needs to aggregate data from multiple tables in a way that does not impact the original tables, and then provide this information to a department. Which of the following is the best way for the administrator to accomplish this task?

- A. Create a materialized view.
- B. Create a function.
- C. Create indexes on those tables.
- D. Create a new database.

Answer: A

Explanation:
The best way for the administrator to accomplish this task is to create a materialized view. A materialized view is a type of view that stores the result of a query on one or more tables as a separate table in the database. A materialized view can aggregate data from multiple tables in a way that does not impact the original tables, and then provide this information to a department as a single source of truth. A materialized view also improves query performance and efficiency by reducing the need to recompute complex queries every time they are executed. The other options are either not suitable or not optimal for this task. For example, creating indexes on those tables may improve query performance on individual tables, but not on aggregated data; creating a new database may require additional resources and maintenance, and may introduce inconsistency or redundancy; creating a function may require additional coding and execution, and may not store the result as a separate table.

NEW QUESTION # 85
Brad is helping to design a disaster recovery strategy for his organization and is analyzing possible storage locations for backup data. He is not certain where the organization will recover operations in the event of a disaster and would like to choose an option that allows them the flexibility to easily retrieve data from any DR site.
Which one of the following storage locations provides the best option for Brad?

- A. Primary data center
- B. Field office
- C. IT manager's home
- D. Cloud computing

Answer: D
