Pass DCA Exam with Passcert Docker DCA dumps in the first attempt.

<https://www.passcert.com/>

100% pass

If you are still struggling to prepare for passing SailPoint real exam at this moment, our DumpsValid IdentityIQ-Associate vce dumps can help you preparation easier and faster. Our website can provide you Valid IdentityIQ-Associate Exam Cram with high pass rate to help you get certification, and then you will become a good master of certification exam.

Keep reading because we have discussed specifications of SailPoint Certified IdentityIQ Associate Exam IdentityIQ-Associate PDF format, desktop SailPoint Certified IdentityIQ Associate Exam IdentityIQ-Associate practice exam software, and SailPoint Certified IdentityIQ Associate Exam IdentityIQ-Associate web-based practice test. DumpsValid is aware that many IdentityIQ-Associate exam applicants can't sit in front of a computer for many hours to study for the IdentityIQ-Associate examination. If you are one of those SailPoint Certified IdentityIQ Associate Exam IdentityIQ-Associate exam candidates, don't worry because we have a portable file of SailPoint SailPoint Certified IdentityIQ Associate Exam PDF Questions for you. SailPoint Certified IdentityIQ Associate Exam IdentityIQ-Associate PDF format works smoothly on all smart devices.

IdentityIQ-Associate Detailed Answers & IdentityIQ-Associate New Learning Materials

Authentic Solutions OfThe SailPoint IdentityIQ-Associate Exam Questions. Consider sitting for an SailPoint Certified IdentityIQ

Associate Exam and discovering that the practice materials you've been using are incorrect and useless. The technical staff at DumpsValid has gone through the SailPoint certification process and knows the need to be realistic and exact. Hundreds of professionals worldwide examine and test every SailPoint IdentityIQ-Associate Practice Exam regularly.

SailPoint IdentityIQ-Associate Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Foundational Concepts: Covers the core purpose of identity security, key IdentityIQ terminology, system components, and how rules, tasks, workflows, and business modeling fit into the platform.
Topic 2	<ul style="list-style-type: none">• User-Driven Requests: Explains how users submit access requests, what request types are available, and how QuickLink Populations control who can request what for whom.
Topic 3	<ul style="list-style-type: none">• Access Modeling: Covers how entitlements and roles are defined, cataloged, and assigned to identities within IdentityIQ.
Topic 4	<ul style="list-style-type: none">• Governance: Addresses how access certifications are conducted and how policy violations are defined and detected across the organization.
Topic 5	<ul style="list-style-type: none">• Provisioning: Covers how IdentityIQ provisions access, including triggering actions, provisioning policies, Lifecycle Events, and attribute synchronization.

SailPoint Certified IdentityIQ Associate Exam Sample Questions (Q63-Q68):

NEW QUESTION # 63

Does this statement accurately describe how roles are acquired by users in the default role model configuration?
Business roles can only be requested by managers.

- A. Yes
- B. No

Answer: B

Explanation:

No. This statement does not accurately describe role acquisition in IdentityIQ. Business roles are not restricted to being requested only by managers. In IdentityIQ, roles may be acquired through role assignment logic, role detection, access requests, or administrative action, depending on the role configuration and the organization's request model.

A business role commonly represents access associated with a business function, job, department, location, or organizational responsibility. Users may receive business roles automatically when their identity attributes satisfy configured role profiles or assignment rules, typically recalculated during Identity Refresh. Separately, roles may be made requestable through Lifecycle Manager and exposed through QuickLinks, where request eligibility is controlled by QuickLink Populations, request configuration, and workflow rules.

Managers may be allowed to request roles for direct reports, but that is only one possible configuration. IdentityIQ can also allow users to request roles for themselves, allow delegated requesters to request for others, or restrict requests to specific populations. Therefore, "only requested by managers" is too narrow and incorrect. Reference topics: Access Modeling, business roles, role assignment, role detection, Identity Refresh, User-Driven Requests, QuickLink Populations, and role request configuration.

NEW QUESTION # 64

Is this displayed in the Identity Warehouse?
Entitlements (identity's permissions on native applications)

- A. No
- B. Yes

Answer: B

Explanation:

Yes. In SailPoint IdentityIQ, the Identity Warehouse presents identity-centered information collected and modeled inside the IdentityCube. Entitlements are part of that identity view because they represent the user's permissions or access rights on connected applications. During aggregation, IdentityIQ reads account data from applications, including entitlement-bearing attributes such as groups, roles, permissions, or other managed access values. These are stored on the identity's application accounts and surfaced in the Identity Warehouse so reviewers, administrators, and governance users can understand what access the identity currently has. This is distinct from identity attributes such as department, manager, location, or lifecycle state. Entitlements describe access on target systems and are central to access reviews, policy evaluation, role modeling, and access request decisions. Displaying entitlements in the Identity Warehouse allows IdentityIQ to provide a complete access profile for the identity, including accounts, assigned roles, detected roles, policy violations, and application permissions. Therefore, entitlements are displayed as part of the Identity Warehouse identity details. Reference topics: Identity Modeling, IdentityCube contents, Identity Warehouse, application accounts, entitlement aggregation, managed attributes, and access visibility.

NEW QUESTION # 65

Is this statement true about group factories and/or populations?

Groups and populations can be assigned as object owners in IdentityIQ.

- A. Yes
- **B. No**

Answer: B

Explanation:

The statement is false. In SailPoint IdentityIQ, groups and populations are used to classify, filter, and organize identities for governance, reporting, certifications, and targeted user experiences. A population is a defined collection of identities, and group factories can dynamically create identity groups based on configured identity attributes. These constructs are useful for segmentation, analysis, and campaign targeting, but they are not the standard objects assigned as owners of IdentityIQ objects.

Ownership in IdentityIQ is normally assigned to an identity or to a workgroup. A workgroup is used when ownership or responsibility must be shared by multiple users, such as application owners, certification owners, entitlement owners, or approval groups. This distinction matters because ownership drives accountability, work item assignment, approvals, escalations, and administrative responsibility. Populations and generated groups do not function as accountable owners in the same way workgroups do.

Therefore, while groups and populations can influence governance scope and visibility, they are not assigned as object owners.

Reference topics: Identity Modeling - groups and populations; Foundational Concepts - common objects and usage; Governance - ownership, certifications, and work item responsibility.

NEW QUESTION # 66

Is this an accurate statement about preventive policy checking in IdentityIQ?

Preventive policy checking can only stop self-service requests.

- A. Yes
- **B. No**

Answer: B

Explanation:

The statement is false. Preventive policy checking in SailPoint IdentityIQ is not limited only to self-service requests. Preventive policy evaluation is used to identify policy violations before access changes are completed. This can occur during access request processing, provisioning-related activity, or other configured request paths where IdentityIQ evaluates proposed changes against defined policies before allowing the transaction to proceed.

A self-service request is only one possible entry point. IdentityIQ access requests may be submitted by an end user, a manager, an administrator, or another authorized requester depending on QuickLink Population rules, request configuration, and access-request permissions. Preventive policy checking evaluates the requested access change itself, not merely the fact that the request was self-initiated. If the proposed access would violate a separation-of-duty, risk, or other governance policy, IdentityIQ can warn, require additional handling, or block the request depending on policy and workflow configuration.

Therefore, the word "only" makes the statement incorrect. Preventive policy checking is a governance control applied to configured access-change activity, not exclusively to self-service actions. Reference topics: Governance, policy detection, preventive policy checking, access request policy evaluation, User-Driven Requests, and provisioning request control.

NEW QUESTION # 67

Is this statement about uncorrelated accounts true?

Uncorrelated Identity Cubes are removed from IdentityIQ after 30 days.

- A. Yes
- **B. No**

Answer: B

Explanation:

The statement is false. IdentityIQ does not apply a universal rule that removes uncorrelated IdentityCubes after 30 days.

Uncorrelated accounts or uncorrelated identity records result from aggregation and correlation processing when IdentityIQ cannot confidently associate an account from an application with an existing IdentityCube. These records remain available for administrative review and remediation until they are resolved through correlation logic, manual correlation, re-aggregation, identity refresh activity, or configured cleanup processes.

The key point is that retention and removal behavior is configuration-driven, not controlled by a fixed 30-day product rule.

Administrators may use tasks, aggregation settings, pruning behavior, or lifecycle processes to clean up stale identity or account data, but such actions depend on implementation choices and task configuration. IdentityIQ preserves uncorrelated data because it may represent a real account requiring governance, certification, policy evaluation, or investigation.

Therefore, the assertion that uncorrelated IdentityCubes are automatically removed after 30 days is incorrect. Reference topics:

Applications, uncorrelated account resolution, correlation configuration, aggregation results, IdentityCube association, identity refresh, and administrative cleanup tasks.

NEW QUESTION # 68

.....

The only goal of all experts and professors in our company is to design the best and suitable IdentityIQ-Associate study materials for all people. According to the different demands of many customers, they have designed the three different versions of the IdentityIQ-Associate certification study guide materials for all customers: PDF, Soft and APP versions. They sincerely hope that all people who use IdentityIQ-Associate Exam Questions from our company can pass the IdentityIQ-Associate exam and get the related certification successfully. And our pass rate for IdentityIQ-Associate exam questions is high as more than 98%.
