100% Pass Quiz 2026 AWS-Certified-Developer-Associate: AWS Certified Developer Associate Exam (DVA-C02) – Reliable Exam Assessment

If you buy our AWS-Certified-Developer-Associate study materials, then you can enjoy free updates for one year. After you start learning, I hope you can set a fixed time to check emails. If the content of the AWS-Certified-Developer-Associate practice guide or system is updated, we will send updated information to your e-mail address. Of course, you can also consult our e-mail on the status of the product updates. I hope we can work together to make you better use our AWS-Certified-Developer-Associate simulating exam.

The AWS-Developer exam consists of 65 multiple-choice and multiple-response questions, and candidates have 130 minutes to complete the exam. AWS-Certified-Developer-Associate exam is available in English, Japanese, Korean, and Simplified Chinese, and candidates can take the exam at any Pearson VUE testing center worldwide. AWS-Certified-Developer-Associate Exam Fee is $150, and candidates can retake the exam after 14 days if they do not pass on their first attempt.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q301-Q306):

NEW QUESTION # 301
A Developer is writing an application that will run on Amazon EC2 instances in an Auto Scaling group. The Developer wants to externalize session state to support the application.
Which services will meet these needs? (Choose two.)

- A. Amazon EBS
- B. Amazon ElastiCache
- C. Amazon Cognito
- D. Amazon DynamoDB
- E. Amazon SQS

Answer: A,C

Explanation:
Explanation/Reference: https://forums.aws.amazon.com/thread.jspa?threadID=238457

NEW QUESTION # 302
A Developer has written a serverless application using multiple AWS services. The business logic is written as a Lambda function which has dependencies on third-party libraries. The Lambda function endpoints will be exposed using Amazon API Gateway. The Lambda function will write the information to Amazon DynamoDB.
The Developer is ready to deploy the application but must have the ability to rollback. How can this deployment be automated, based on these requirements?

- A. Use syntax conforming to the Serverless Application Model in the AWS CloudFormation template to define the Lambda function resource.
- B. Use an AWS CloudFormation template and use CloudFormation syntax to define the Lambda function resource in the template.
- C. Deploy using Amazon Lambda API operations to create the Lambda function by providing a deployment package.
- D. Create a bash script which uses AWS CLI to package and deploy the application.

Answer: A

Explanation:
Refer AWS documentation - SAM Gradual Code Deployment
If you use AWS SAM to create your serverless application, it comes built-in with AWS CodeDeploy to help ensure safe Lambda deployments. With just a few lines of configuration, AWS SAM does the following for you:
Deploys new versions of your Lambda function, and automatically creates aliases that point to the new version.
Gradually shifts customer traffic to the new version until you're satisfied that it's working as expected, or you roll back the update.
Defines pre-traffic and post-traffic test functions to verify that the newly deployed code is configured correctly and your application operates as expected.
Rolls back the deployment if CloudWatch alarms are triggered.

NEW QUESTION # 303
A company is offering APIs as a service over the internet to provide unauthenticated read access to statistical information that is updated daily. The company uses Amazon API Gateway and AWS Lambda to develop the APIs. The service has become popular, and the company wants to enhance the responsiveness of the APIs.
Which action can help the company achieve this goal?

- A. Configure API Gateway to use an interface VPC endpoint.
- B. Enable cross-origin resource sharing (CORS) for the APIs.
- C. Configure usage plans and API keys in API Gateway.
- D. Enable API caching in API Gateway.

Answer: D

NEW QUESTION # 304
When should a user try to Force Detach an EBS volume?

- A. If the volume is not accessible from the instance
- B. If the volume is not unmounted and the user still wants to detach
- C. If the volume is a root volume
- D. If the volume is stuck in a detaching state

Answer: D

Explanation:
If an EBS volume stays in the detaching state, the user can force the detachment by clicking Force Detach. Forcing the detachment can lead to either data loss or a corrupted file system.
The user should use this option only as a last resort to detach a volume from a failed instance or if he is detaching a volume with the intention of deleting it.
http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/ebs-detaching-volume.html

NEW QUESTION # 305

A user is planning to host a web server as well as an app server on a single EC2 instance which is a part of the public subnet of a VPC. How can the user setup to have two separate public IPs and separate security groups for both the application as well as the web server?

- A. Launch a VPC instance with two network interfaces. Assign a separate security group to each and AWS will assign a separate public IP to them.
- B. Launch a VPC with ELB such that it redirects requests to separate VPC instances of the public subnet.
- C. Launch a VPC instance with two network interfaces. Assign a separate security group and elastic IP to them.
- D. Launch VPC with two separate subnets and make the instance a part of both the subnets.

Answer: C

Explanation:
If you need to host multiple websites(with different IPs) on a single EC2 instance, the following is the suggested method from AWS.
Launch a VPC instance with two network interfaces
Assign elastic IPs from VPC EIP pool to those interfaces (Because, when the user has attached more than one network interface with an instance, AWS cannot assign public IPs to them.) Assign separate Security Groups if separate Security Groups are needed
This scenario also helps for operating network appliances, such as firewalls or load balancers that have multiple private IP addresses for each network interface.
