

JN0-336 Valid Exam Questions - JN0-336 Test Score Report

What's more, part of that PassCollection JN0-336 dumps now are free: <https://drive.google.com/open?id=15TiawPst91xXJg4ueVDAup9txjOIdaK5>

A free demo of JN0-336 practice test questions and up to 1 year of free updates are also available at PassCollection. So, this is the time to download valid Juniper JN0-336 exam questions and start studying. There is no room for delays in Security, Specialist (JNCIS-SEC) (JN0-336) preparation exams or second thoughts when you know that you have to survive the competition and safeguard your job.

In addition to the environment, we also provide simulations of papers. You really have to believe in the simulation paper of our JN0-336 study materials. With our JN0-336 practice engine, you can know that practicing the questions and answers are a enjoyable experience and it is an interactive system. If you are answering the questions rightly, then the result will show right, and if you choose the wrong answer, then it will show wrong. And when you finish the JN0-336 Exam Questions, the scores will come up as well.

JN0-336 Security, Specialist (JNCIS-SEC) Learning Material in 3 Different Formats

Several advantages we now offer for your reference. On the one hand, our JN0-336 learning questions engage our working staff in understanding customers' diverse and evolving expectations and incorporate that understanding into our strategies, thus you can 100% trust our JN0-336 Exam Engine. On the other hand, the professional JN0-336 study materials determine the high pass rate. According to the research statistics, we can confidently tell that 99% candidates have passed the JN0-336 exam.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q44-Q49):

NEW QUESTION # 44

Which rule base in an IDP policy is used to eliminate false positives?

- A. IPS
- B. signature
- C. exempt
- D. monitor

Answer: C

Explanation:

The correct answer is D. exempt. In Junos IDP, the exempt rulebase is specifically used to prevent selected traffic from triggering known false-positive detections. Juniper's IDP documentation explains that exempt rules can be configured when an IDP policy

generates false positives for a particular attack object, source, destination, or traffic pattern. The exempt rulebase lets the administrator exclude matching traffic from attack detection while still allowing the rest of the IDP policy to inspect other traffic normally.

Option A, IPS, is wrong because the IPS rulebase is the main inspection rulebase used to detect and act on attacks. It is where attack objects and actions are commonly applied, but it is not the rulebase designed to eliminate false positives. Option B, monitor, is not the correct false-positive elimination mechanism.

Monitoring can help observe behavior, but it does not exempt traffic from matching an attack object. Option C, signature, is wrong because signatures are attack-detection patterns, not a rulebase type used to suppress false positives. The operational correction for noisy or irrelevant matches is to create an exempt rule for the specific trusted source, destination, or attack object. Reference topics: IDP rulebases, exempt rulebase, false- positive tuning, attack objects, IPS inspection.

NEW QUESTION # 45

How does the SSL proxy detect if encryption is being used?

- A. It looks at the destination port number.
- B. It uses application identity services.
- C. It verifies the length of the packet
- D. It queries the client device.

Answer: A

Explanation:

The SSL proxy can detect if encryption is being used by looking at the destination port number of the packet. If the port number is 443, then the proxy can assume that the packet is being sent over an encrypted connection. If the port number is different, then the proxy can assume that the packet is not encrypted. For more information, please refer to the Juniper Networks JNCIS-SEC Study Guide.

NEW QUESTION # 46

Which two statements are correct when considering IPS rule base evaluation? (Choose two.)

- A. IPS evaluates rules sequentially
- B. IPS evaluates rules concurrently.
- C. IPS applies the most severe action to traffic matching multiple rules,
- D. IPS applies the least severe action to traffic matching multiple rules.

Answer: A,C

NEW QUESTION # 47

You are deploying a new SRX Series device and you need to log denied traffic.

In this scenario, which two policy parameters are required to accomplish this task? (Choose two.)

- A. session-init
- B. session-close
- C. deny
- D. count

Answer: A,C

Explanation:

The correct answers are A and C. To log denied traffic on an SRX Series Firewall, the security policy must deny the traffic and must generate a log at session initiation. Juniper's security policy monitoring documentation states that to view logs from denied connections, you enable logging on session-init. Juniper's traffic-logging guidance also states that for a security policy with a deny action, traffic logs must be generated when a session starts.

Option C is required because the policy action must be deny; otherwise the traffic is not denied by that policy.

Option A is required because denied traffic does not complete a normal permitted session lifecycle, so session- init is the correct logging stage for denied connection attempts. Option B, session-close, is used to log permitted sessions after teardown or conclusion; it is not the required parameter for denied traffic. Option D, count, increments policy counters but does not create traffic logs. The correct configuration concept is: match the unwanted traffic, apply then deny, and enable then log session-init. Reference

topics: SRX security policies, deny action, session-init logging, traffic log generation, policy counters.

NEW QUESTION # 48

Which action will the SRX Series device take if traffic matches the custom attack object shown in the exhibit?

```
[edit security idp]
user@srx# show
custom-attack BGP-DEFEND {
  recommended-action drop;
  severity critical;
  attack-type {
    signature {
      context bgp-update-attr-as-path;
      pattern 65501;
      direction any;
    }
  }
}
```

- A. The SRX series device will drop the traffic.
- **B. the action taken is defined in the IDP policy that includes this attack object.**
- C. The SRX Series device will reject the traffic.
- D. the action taken is defined by the security policy.

Answer: B

Explanation:

The correct answer is A. the action taken is defined in the IDP policy that includes this attack object. The exhibit defines a custom attack object named BGP-DEFEND under the security idp custom-attack hierarchy.

The custom object includes metadata such as recommended-action drop, severity critical, and signature match conditions such as BGP update AS-path context and pattern 65501. However, an attack object by itself does not determine the final enforcement behavior. The attack object defines what to match; the IDP policy rule that references the object defines what action to take when that match occurs. Juniper describes attack objects as objects used inside IDP rules to identify malicious activity, while IDP rules include rule actions such as drop-packet, drop-connection, close-client, close-server, recommended, and others.

Option B is wrong because the firewall security policy enables IDP inspection by applying an IDP policy, but the IDP action is not selected directly by the normal security policy. Options C and D are too absolute. Even though the custom object shows recommended-action drop, that is only used if the IDP rule action invokes recommended behavior. Without seeing the IDP policy rule action, you cannot conclude reject or drop.

Reference topics: IDP custom attack objects, IDP policy rule actions, recommended action, signature-based attack matching.

NEW QUESTION # 49

.....

Will you feel that the product you have brought is not suitable for you? One trait of our JN0-336 exam prepare is that you can freely download a demo to have a try. Because there are excellent free trial services provided by our JN0-336 exam guides, our products will provide three demos that specially designed to help you pick the one you are satisfied. On the one hand, by the free trial services you can get close contact with our products, learn about the detailed information of our JN0-336 Study Materials, and know how to choose the right version of our JN0-336 exam questions.

JN0-336 Test Score Report: https://www.passcollection.com/JN0-336_real-exams.html

If your concepts are shaken and you want to revise everything, then you must consider using JN0-336 dumps pdf provided by PassCollection, Pass Your Exam in 24 HOURS With JNCIS-SEC JN0-336 Dumps, Juniper offers latest Security, Specialist (JNCIS-SEC) exam and valid practice questions book to help you pass the Security, Specialist (JNCIS-SEC) JN0-336 exam in your field, The JN0-336 braindumps are well organized and material consistency quite genuine and effective.

As you practice more and more, this repetition helps permanently JN0-336 store the data so that when you need the information to be recalled on the fly, it's nearly instantaneous.

When thinking about black and white, of course, a lot of people think of the zone system, If your concepts are shaken and you want to revise everything, then you must consider using JN0-336 Dumps PDF provided by PassCollection.

Juniper JN0-336 Exam Questions Updates Are Free For 1 year

Pass Your Exam in 24 HOURS With JNCIS-SEC JN0-336 Dumps, Juniper offers latest Security, Specialist (JNCIS-SEC) exam and valid practice questions book to help you pass the Security, Specialist (JNCIS-SEC) JN0-336 exam in your field.

The JN0-336 braindumps are well organized and material consistency quite genuine and effective, The success needs perspiration and smart way.
