## HCL Software Academy HCLSoftware Certified Associate Administrator Exam - Notes/Domino 12 Sample Questions (Q35-Q40):

### NEW QUESTION # 35

When a user is renamed, which AdminP request must complete to update ACLs across databases?

- A. Rename in ACL
- B. Rename Person in Domino Directory
- C. Update User Certificate
- D. Synchronize Replicas

Answer: A

Explanation:

The Administration Process (AdminP) handles user renames in several stages. After the user accepts the name change in their Notes client, AdminP triggers a series of requests. The specific request responsible for searching through every database on the server and changing the user's old name to the new name in the Access Control List is the Rename in ACL request. This ensures the user retains their permissions under their new identity.

#### NEW QUESTION # 36

Which two types of replication modes are supported by Domino? (Choose two)

- A. Time-based replication
- B. Push replication
- C. HTTP over DAOS
- D. Pull replication

**Answer: B,D**

Explanation:

Domino replication occurs in two primary directions: Push and Pull . In Pull replication, the local server asks the remote server for changes. In Push replication, the local server sends its changes to the remote server.

Most standard Connection documents are configured for "Push-Pull" replication, which is a bidirectional exchange ensuring both replicas become identical during the task.

#### NEW QUESTION # 37

Which two factors should be considered when planning the geographical placement of Domino servers in a distributed environment? (Choose two)

- A. Operating system kernel version
- B. Number of mailboxes
- C. Time zone differences
- D. Network bandwidth and latency

**Answer: C,D**

Explanation:

When planning where to physically place servers in a global or distributed domain, two critical factors are Time zone differences and Network bandwidth and latency . Time zones impact the scheduling of replication and maintenance tasks to avoid peak business hours. Bandwidth and latency are vital because they determine how quickly data can be replicated between servers; poor network conditions can lead to data inconsistency and slow mail delivery between locations.

#### NEW QUESTION # 38

Which two steps are required to reclaim space from DAOS after deleting large numbers of documents? (Choose two)

- A. Issue tell daosmgr prune command
- B. Issue tell daosmgr resync command
- C. Enable Transaction Logging
- D. Run the Fixup task

**Answer: A,B**

Explanation:

The Domino Attachment and Object Service (DAOS) stores attachments separately from NSF files. When documents are deleted, the associated attachment files (.NLO) are not immediately removed from the storage.

To reclaim this physical disk space, an administrator must:

\* Issue the tell daosmgr prune command : This identifies and deletes attachment files that are no longer referenced by any database and have exceeded the deferral interval.

\* Issue the tell daosmgr resync command : This synchronizes the DAOS catalog (daoscat.nsf) with the physical files on disk to

ensure the repository is accurate.

### NEW QUESTION # 39

Which Domino server task should be used to enforce message delivery limits and control mail flow?

- A. Router
- B. MailTracker
- C. MailConvert
- D. AdminP

**Answer: A**

Explanation:

The Router task is the engine responsible for the delivery and transfer of all mail in the Domino system.

Because it manages the mail.box and determines the delivery path for every message, it is also the task that enforces message delivery limits -such as maximum message size-and controls mail flow based on the configurations set in the Configuration Settings document.
