Reliable Fire-Inspector-II Test Blueprint & Fire-Inspector-II Pdf Demo Download

They work together and analyze the examination content to compile most probable Fire-Inspector-II real dumps in three formats. These International Code Council Certification Exams questions will surely appear in the next International Code Council Fire-Inspector-II exam. Memorizing these International Code Council Fire-Inspector-II Valid Dumps will help you easily attempt the Fire-Inspector-II exam within the allocated time. Thousands of aspirants have passed their Fire-Inspector-II exam, and they all got help from our International Code Council Fire-Inspector-II updated exam dumps.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q53-Q58):

NEW QUESTION # 53

When more than 500 chairs are used for an assembly event held in a gymnasium, they must be secured to the floor or:

- A. be spaced at least 6 in. apart.
- **B. be fastened together in groups of not less than 3.**
- C. be fastened together in groups of not less than 10.
- D. be fastened together in groups of not less than 6.

Answer: B

Explanation:

Seating Arrangements for Large Assembly Events

According to the International Fire Code (IFC) 2021, Section 1029.14, when more than 500 chairs are used for an assembly event

held in a gymnasium (or similar venue), they must be either:

Secured to the floor OR

Fastened together in groups of at least three (3) chairs.

2. Why Groups of 3 is the Correct Answer

This requirement ensures organized seating, preventing chairs from shifting or obstructing aisles during emergencies.

Properly fastened chairs reduce the risk of crowd-related hazards, ensuring safe and efficient evacuation if needed.

3. Verification of Other Options

Option A (spaced at least 6 inches apart) - Incorrect, as the IFC requires chairs to be fastened together or secured when over 500 are used.

Option C (groups of not less than 6) - Incorrect, as the minimum required grouping is 3.

Option D (groups of not less than 10) - Incorrect, as the IFC does not mandate groups of 10.

Reference Sources:

International Fire Code (IFC) 2021 - Section 1029.14 (Seating and Fastening Requirements for Assembly Events) NFPA 101: Life Safety Code (Seating Arrangements in Assembly Occupancies) ICC Fire Inspector II Study Guide (2021)

NEW QUESTION # 54

When investigating a complaint of a violation within an occupied public area, the fire inspector:

- A. must provide the occupant with at least 24 hours of advance notice.
- B. must give prior notice to the occupant.
- C. must either give prior notice to the occupant or obtain an inspection warrant.
- D. need not give prior notice of the inspection to the occupant.

Answer: C

Explanation:

Reference to ICC Fire Code and Legal Authority:

The International Fire Code (IFC) and Standard Inspection Procedures establish that fire inspectors must either obtain consent from the occupant or acquire an inspection warrant if entry is denied.

IFC Section 104.3 (Right of Entry) states that inspectors have the authority to enter a building at reasonable times to conduct an inspection, but if entry is refused, a warrant must be obtained.

Legal and Ethical Considerations:

Fourth Amendment Rights protect against unlawful searches, requiring inspectors to either:

Gain voluntary consent from the occupant, OR

Obtain an inspection warrant if the occupant refuses entry.

Prior notice is not always required, but if the occupant is unavailable or uncooperative, legal measures must be taken.

Clarification of Incorrect Answer Choices:

A: must give prior notice to the occupant # Incorrect

While prior notice is sometimes given as a courtesy, it is not legally required for routine inspections unless mandated by local ordinances.

B: need not give prior notice of the inspection to the occupant # Incorrect While prior notice may not be required, entry still requires consent or a warrant. This answer does not fully address the legal requirement for an inspection warrant if entry is denied.

C: must provide the occupant with at least 24 hours of advance notice # Incorrect No universal 24-hour notice rule exists under the IFC unless specified by local regulations.

Conclusion:

The correct and verified answer is D because fire inspectors must either give prior notice to the occupant or obtain an inspection warrant if entry is refused (IFC Section 104.3).

NEW QUESTION # 55

Given: Scheduling inspections should be done to obtain a high level of efficiency. When scheduling inspections at multiple occupancies on the same day, the inspector should:

- A. only identify critical violations.
- B. select occupancies with historically low violations.
- C. set limits on the time spent at each occupancy.
- D. select occupancies in the same general area.

Answer: D

Explanation:

Efficient scheduling minimizes travel time and maximizes inspection coverage, a practical aspect of fire inspection management (not explicitly detailed in the IFC but implied in Section 106.2, Inspections).

Selecting occupancies in the same geographic area (C) reduces travel, allowing more time for thorough inspections. Option A undermines the comprehensive nature of inspections required by IFC Section 106.1.

Option B could compromise inspection quality, not efficiency. Option D focuses on violation history, which doesn't inherently improve scheduling efficiency and may skew priorities. Thus, C is the most logical and IFC-aligned choice.

Reference: IFC 2021, Section 106.2 (Inspections).

NEW QUESTION # 56

Refrigeration units or systems having a refrigerant circuit containing Group A1 refrigerant shall be provided with approved emergency signs, charts, and labels in accordance with NFPA 704 when the quantity exceeds ____ lb.

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

Refrigeration systems and units are regulated under IFC 2021, Section 605 - Refrigeration Equipment, and the requirement for emergency signs, charts, and labels is tied to the NFPA 704 Hazardous Materials Identification System.

IFC 2021, Section 605.12.3 - Signage for Refrigeration Systems:

States that approved emergency signs, charts, and labels must be provided when the refrigerant quantity exceeds 220 pounds for Group A1 refrigerants.

Definition of Group A1 Refrigerants (Low Toxicity, Low Flammability):

Examples include R-134a, R-410A, and R-22, which are commonly used in commercial and industrial HVAC systems.

Why Other Options Are Incorrect?

A: 30 lb. - Too low; labeling requirements do not apply at this threshold.

B: 100 lb. - Incorrect; the IFC requirement specifies 220 lb.

C: 200 lb. - Close, but still below the 220 lb. threshold.

NEW QUESTION # 57

A "control area" is defined by the fire code as a building or portion of a building within which the exempted amounts of ____ are allowed to be stored, dispensed, used, or handled.

- A. flammable liquids only
- B. hazardous materials
- C. combustible liquids only
- D. corrosive materials only

Answer: B

NEW QUESTION # 58

.....

If you want to get Fire-Inspector-II certification, you may need to spend a lot of time and energy. With our Fire-Inspector-II study materials, you can save a lot of time and effort. We know that you must have a lot of other things to do, and our Fire-Inspector-II learning guide will relieve your concerns in some ways.
