

Free PDF Quiz 2026 Juniper JN0-336 Marvelous Latest Exam Topics

P.S. Free 2026 Juniper JN0-336 dumps are available on Google Drive shared by ExamDumpsVCE: <https://drive.google.com/open?id=1D7UtxiiF5di7TIA4LJSzcIfeJAvS9cET>

To be out of the ordinary and seek an ideal life, we must master an extra skill to get high scores and win the match in the workplace. Contemporarily, social competitions stimulate development of modern science, technology and business, which revolutionizes our society's recognition to JN0-336 Exam and affect the quality of people's life. Our JN0-336 exam question can help make your dream come true. What's more, you can have a visit of our website that provides you more detailed information about the JN0-336 guide torrent.

The PDF version of JN0-336 training materials supports download and printing, so its trial version also supports. You can learn about the usage and characteristics of our JN0-336 learning guide in various trial versions, so as to choose one of your favorite in formal purchase. In fact, all three versions contain the same questions and answers. You can either choose one or all three after payment. I believe you can feel the power of our JN0-336 Preparation prep in these trial versions.

You just finished setting up your command-and-control (C&C) category with Juniper ATP Cloud. You notice that all of the feeds have zero objects in them.

Which statement is correct in this scenario?

- A. No action is required, the feeds take a few minutes to download.
- B. Set the maximum C&C entries within the Juniper ATP Cloud GUI.
- C. The security intelligence policy must be configured; on a unified security policy
- D. Use the commit full command to start the download.

Answer: A

Explanation:

According to the Juniper Networks JNCIS-SEC Study Guide, when you set up your command-and- control (C&C) category with Juniper ATP Cloud, all of the feeds will initially have zero objects in them.

This is normal, as it can take a few minutes for the feeds to download. No action is required in this scenario and you will notice the feeds start to populate with objects once the download is complete.

NEW QUESTION # 53

How does the SSL proxy detect if encryption is being used?

- A. It queries the client device.
- B. It uses application identity services.
- C. It verifies the length of the packet

- D. It looks at the destination port number.

Answer: D

Explanation:

The SSL proxy can detect if encryption is being used by looking at the destination port number of the packet. If the port number is 443, then the proxy can assume that the packet is being sent over an encrypted connection. If the port number is different, then the proxy can assume that the packet is not encrypted. For more information, please refer to the Juniper Networks JNCIS-SEC Study Guide.

NEW QUESTION # 54

Which two functions does Juniper ATP Cloud perform to reduce delays in the inspection of files?
(Choose two.)

- A. Juniper ATP Cloud allows end users to bypass the inspection of files.
- B. Juniper ATP Cloud uses a single antivirus software package to analyze files.
- C. Juniper ATP Cloud allows the creation of allowlists.
- D. Juniper ATP Cloud performs a cache lookup on files.

Answer: C,D

Explanation:

Juniper ATP Cloud is a cloud-based service that provides advanced threat prevention and detection for your network. It integrates with SRX Series firewalls and MX Series routers to analyze files and network traffic for signs of malicious activity.

Two functions that Juniper ATP Cloud performs to reduce delays in the inspection of files are:

Juniper ATP Cloud allows the creation of allowlists: Allowlists are lists of trusted files or file hashes that are excluded from scanning by Juniper ATP Cloud. You can create allowlists based on file name, file type, file size, file hash, or sender domain. By using allowlists, you can reduce the number of files that need to be uploaded to Juniper ATP Cloud for analysis and improve the performance and efficiency of your network.

Juniper ATP Cloud performs a cache lookup on files: Cache lookup is a process that checks if a file has been previously scanned by Juniper ATP Cloud and if there is a cached verdict for it. If there is a cached verdict, Juniper ATP Cloud returns it immediately without scanning the file again. If there is no cached verdict, Juniper ATP Cloud uploads the file for analysis. By using cache lookup, you can reduce the time and bandwidth required for scanning files by Juniper ATP Cloud.

NEW QUESTION # 55

Which two statements about SRX Series device chassis clusters are correct? (Choose two.)

- A. The chassis cluster data plane is connected with SPC ports.
- B. The chassis cluster can contain a maximum of three devices.
- C. The chassis cluster data plane is connected with revenue ports.
- D. The chassis cluster can contain a maximum of two devices.

Answer: C,D

Explanation:

Two statements that are correct about SRX Series device chassis clusters are:

The chassis cluster data plane is connected with revenue ports: A chassis cluster is a high-availability feature that groups two identical SRX Series devices into a cluster that acts as a single device. The cluster has two types of links: control links and fabric links. The control links are used for exchanging heartbeat messages and configuration synchronization between the nodes. The fabric links are used for forwarding data traffic between the nodes. The fabric links are connected with revenue ports, which are regular Ethernet interfaces that can also be used for normal traffic when not in cluster mode.

The chassis cluster can contain a maximum of two devices: A chassis cluster can only consist of two nodes: node 0 and node 1. The nodes must be the same model, have the same hardware configuration, run the same software version, and have the same license keys. The nodes share a common configuration and act as backup for each other in case of failure.

NEW QUESTION # 56

Which two statements are correct about the cSRX? (Choose two.)

- A. The cSRX supports BGP, OSPF, and IS-IS routing services.
- **B. The cSRX supports firewall, NAT, IPS, and UTM services.**
- **C. The cSRX has three default zones: trust, untrust, and management**
- D. The cSRX only supports Layer 2 "bump-in-the-wire" deployments.

Answer: B,C

Explanation:

The two statements that are correct about the cSRX are that it supports firewall, NAT, IPS, and UTM services, and that it has three default zones: trust, untrust, and management. The cSRX is a software-defined security solution that provides comprehensive network security capabilities and is designed for virtualized environments. It supports firewall, NAT, IPS, and UTM services to protect against threats, as well as BGP, OSPF, and IS-IS routing services for routing functionality. Additionally, the cSRX has three default zones: trust, untrust, and management. The trust zone is used to define traffic that is allowed to enter the network, the untrust zone is used to define traffic that should be blocked from entering the network, and the management zone is used to manage the device itself. The cSRX does not support Layer 2 "bump-in-the-wire" deployments.

NEW QUESTION # 57

.....

If you feel difficult in choosing which version of our JN0-336 reliable exam guide, if you want to be simple, PDF version may be suitable for you. PDF version is a normal file. Many candidates are used to printing out and then writing & reading of JN0-336 reliable exam guide on paper. Yes, it is silent and clear. Also if you have some unclearly questions, you can ask or talk with others easily. Others may just think that it is normally practice material. Also you can print out many copies of Juniper JN0-336 Reliable Exam Guide and share with others.
