Certainly you have heard of DumpsTorrent Google Professional-Cloud-Security-Engineer Dumps. But have you tried it? We often hear this, "DumpsTorrent questions and answers are really good reference materials, thanks to the dumps, I pass my exam successfully." DumpsTorrent has been favourably commented by the people who used its questions and answers. This is because it can really help students to save a lot of time, and ensure that everyone pass the exam successfully.

Google Professional-Cloud-Security-Engineer (Google Cloud Certified - Professional Cloud Security Engineer) Certification Exam is designed to test the knowledge and skills of individuals in securing cloud infrastructure and services on the Google Cloud Platform (GCP). Google Cloud Certified - Professional Cloud Security Engineer Exam certification is ideal for professionals who are responsible for designing, implementing, and managing security solutions for GCP environments. Professional-Cloud-Security-Engineer Exam covers a broad range of topics, including identity and access management, data protection, network security, incident management, and compliance.

Professional-Cloud-Security-Engineer Exam Quiz & Professional-Cloud-Security-Engineer Test Dumps Free

In informative level, we should be more efficient. In order to take the initiative, we need to have a strong ability to support the job search. And how to get the test Professional-Cloud-Security-Engineer certification in a short time, which determines enough qualification certificates to test our learning ability and application level. We hope to be able to spend less time and energy to take into account the test Professional-Cloud-Security-Engineer Certification, but the qualification examination of the learning process is very wasted energy, so how to achieve the balance? The Professional-Cloud-Security-Engineer exam prep can be done to help you pass the Professional-Cloud-Security-Engineer exam.

Google Cloud Certified - Professional Cloud Security Engineer Exam Sample Questions (Q297-Q302):

NEW QUESTION # 297
A customer's internal security team must manage its own encryption keys for encrypting data on Cloud Storage and decides to use customer-supplied encryption keys (CSEK).
How should the team complete this task?

- A. Use the gsutil command line tool to upload the object to Cloud Storage, and specify the location of the encryption key.
- B. Upload the encryption key to a Cloud Storage bucket, and then upload the object to the same bucket.
- C. Encrypt the object, then use the gsutil command line tool or the Google Cloud Platform Console to upload the object to Cloud Storage.

- D. Generate an encryption key in the Google Cloud Platform Console, and upload an object to Cloud Storage using the specified key.

Answer: C

Explanation:

NEW QUESTION # 298
Your organization must follow the Payment Card Industry Data Security Standard (PCI DSS). To prepare for an audit, you must detect deviations at an infrastructure-as-a-service level in your Google Cloud landing zone. What should you do?

- A. Create a data profile covering all payment-relevant data types. Configure Data Discovery and a risk analysis job in Google Cloud Sensitive Data Protection to analyze findings.
- B. Create an Assured Workloads folder in your Google Cloud organization. Migrate existing projects into the folder and monitor for deviations in the PCI DSS.
- C. Use the Google Cloud Compliance Reports Manager to download the latest version of the PCI DSS report. Analyze the report to detect deviations.
- D. Activate Security Command Center Premium. Use the Compliance Monitoring product to filter findings that may not be PCI DSS compliant

Answer: D

Explanation:
To ensure compliance with the Payment Card Industry Data Security Standard (PCI DSS) at the infrastructure-as-a-service (IaaS) level within Google Cloud, it's essential to have continuous monitoring and assessment tools that can detect deviations from compliance requirements.
Option A: Creating data profiles and configuring Data Discovery jobs in Google Cloud Sensitive Data Protection focuses on identifying and analyzing sensitive data but does not directly address infrastructure compliance monitoring.
Option B: Downloading the latest PCI DSS report from the Compliance Reports Manager provides a static compliance report but does not offer real-time detection of deviations within your specific environment.
Option C: Utilizing Assured Workloads helps in creating environments that meet specific compliance requirements, but migrating existing projects into such folders does not actively detect deviations; it primarily ensures that new workloads comply with predefined policies.
Option D: Activating Security Command Center (SCC) Premium and leveraging its Compliance Monitoring capabilities allows for continuous assessment of your Google Cloud environment against PCI DSS requirements. SCC can identify misconfigurations, vulnerabilities, and compliance violations in real-time, providing actionable insights to address any issues promptly.
Therefore, Option D is the most effective approach to detect deviations at the IaaS level in preparation for a PCI DSS audit.

NEW QUESTION # 299
You plan to use a Google Cloud Armor policy to prevent common attacks such as cross-site scripting (XSS) and SQL injection (SQLi) from reaching your web application's backend. What are two requirements for using Google Cloud Armor security policies? (Choose two.)

- A. The load balancer must be an external HTTP(S) load balancer.
- B. The backend service's load balancing scheme must be EXTERNAL.
- C. The load balancer must be an external SSL proxy load balancer.
- D. Google Cloud Armor Policy rules can only match on Layer 7 (L7) attributes.
- E. The load balancer must use the Premium Network Service Tier.

Answer: A,D

NEW QUESTION # 300
You are exporting application logs to Cloud Storage. You encounter an error message that the log sinks don't support uniform

bucket-level access policies. How should you resolve this error?

- A. Change the access control model for the bucket
- B. Add the roles/logging.bucketWriter Identity and Access Management (IAM) role to the bucket for the log sink identity.
- C. Update your sink with the correct bucket destination.
- D. Add the roles/logging.logWriter Identity and Access Management (IAM) role to the bucket for the log sink identity.

Answer: C

NEW QUESTION # 301

You are implementing data protection by design and in accordance with GDPR requirements. As part of design reviews, you are told that you need to manage the encryption key for a solution that includes workloads for Compute Engine, Google Kubernetes Engine, Cloud Storage, BigQuery, and Pub/Sub. Which option should you choose for this implementation?

- A. Cloud External Key Manager
- B. Customer-managed encryption keys
- C. Customer-supplied encryption keys
- D. Google default encryption

Answer: B

Explanation:
To comply with GDPR requirements and manage encryption keys for workloads across multiple Google Cloud services, customer-managed encryption keys (CMEK) offer a suitable solution.
Customer-managed encryption keys (B):
CMEK allows you to create and manage encryption keys using Google Cloud Key Management Service (KMS). You maintain full control over the key lifecycle, including key rotation and destruction.
CMEK can be used with various Google Cloud services, such as Compute Engine, Google Kubernetes Engine, Cloud Storage, BigQuery, and Pub/Sub, ensuring consistent and compliant encryption across your environment.
Using CMEK, you can implement data protection by design, aligning with GDPR requirements by ensuring that encryption keys are appropriately managed and secured.
