SCRUM PSM I Assessment

Which two statements best describe the Product Backlog?

- a. It changes as we learn more about the project.
- b. Contains all tasks identified by the developers.
- c. It's used to create the project plan.
- d. It is never baselined. - A,

Who has the final say on the order of the Product Backlog?

- A) The Stakeholders
- B) The Development Team
- C) The Scrum Master
- D) The Product Owner
- E) The CEO - D

The Product Owner is the sole person responsible for managing the Product Backlog.

Development Team membership should change:

- A) Every Sprint to promote shared learning.
 - B) Never, because it reduces productivity.
 - C) As needed, while taking into account a short-term reduction in productivity.
 - D) As needed, with no special allowance for changes in productivity. - C
- Teams typically go through some steps before achieving a state of increased performance. Changing membership typically reduces cohesion, affecting performance and productivity in the short term.

When does the next Sprint begin?

- A) Next Monday.
 - B) Immediately following the next Sprint Planning.
 - C) When the Product Owner is ready.
 - D) Immediately after the conclusion of the previous Sprint. - D
- A new Sprint starts immediately after the conclusion of the previous Sprint.

The three pillars of empirical process control are:

- A) Respect For People, Kaizen, Eliminating Waste
- B) Planning, Demonstration, Retrospective
- C) Inspection, Transparency, Adaptation
- D) Planning, Inspection, Adaptation
- E) Transparency, Eliminating Waste, Kaizen - C

Scrum is founded on empirical process control theory, or empiricism. Empiricism asserts that knowledge comes from experience and making decisions based on what is known. Three pillars uphold every implementation of empirical process control: transparency, inspection, and adaptation.

Which two things does the Development Team do during the first Sprint?

PSM-I test materials are famous for instant access to download. And you can obtain the download link and password within ten minutes, so that you can start your learning as quickly as possible. PSM-I exam dumps are verified by professional experts, and they possess the professional knowledge for the exam, therefore you can use them at ease. In order to let you know the latest information for the exam, we offer you free update for one year, and our system will send the latest version for PSM-I Exam Dumps to your email automatically.

Scrum is an Agile framework for software development that is based on iterative and incremental development. It is a lightweight framework that emphasizes collaboration, transparency, and adaptability. Scrum is widely used in software development but can be applied to other industries as well. The Scrum framework consists of three roles: the Scrum Master, the Product Owner, and the Development Team. The Scrum Master is responsible for facilitating the Scrum process and ensuring that the team follows Scrum principles and practices.

Scrum PSM-I Certification is ideal for those who want to pursue a career as a Scrum Master or a Scrum Coach. Professional Scrum Master I certification provides you with the skills and knowledge required to implement and manage the Scrum framework in an organization. It also helps you to understand the importance of communication, collaboration, and teamwork in Scrum.

Free PDF 2026 Scrum Latest PSM-I: Valid Braindumps Professional Scrum Master I Questions

High quality practice materials like our Scrum PSM-I learning dumps exert influential effects which are obvious and everlasting during your preparation. The high quality product like our Professional Scrum Master I PSM-I Real Exam has no need to advertise everywhere, the exam candidates are the best living and breathing ads.

The PSM-I exam is one of the most popular certifications in the agile community. It is designed to test a candidate's knowledge of Scrum and its application in real-world scenarios. PSM-I exam is challenging, but it is also rewarding. Passing the PSM-I Exam demonstrates that the candidate has a deep understanding of Scrum and its principles. It also shows that they are committed to improving their knowledge and skills in this area.

Scrum Professional Scrum Master I Sample Questions (Q112-Q117):

NEW QUESTION # 112

(The Definition of Done serves which three purposes?

Choose the best three answers.)

- A. Create a shared understanding of when work is complete.
- B. Describe the work that must be mostly done before the Sprint is allowed to end.
- C. Describe the purpose, objective, and timebox of each Scrum event.
- D. Guide the Developers on how many Product Backlog items to select for the Sprint.
- E. Increase transparency.

Answer: A,D,E

Explanation:

The best answers are A, C, and E. The Definition of Done creates transparency by making everyone understand what it means for work to be complete. That makes Option C correct. It also creates a shared understanding of completion, which makes Option E correct. This is essential in Scrum because inspection is only meaningful when there is clarity about whether a Product Backlog item or Increment is actually done.

Option A is also correct because the Definition of Done helps Developers determine how much work they can realistically select during Sprint Planning. If the team understands the full quality criteria required for completion, they can make better decisions about how many Product Backlog items fit within the Sprint.

Option B is incorrect because Scrum does not support "mostly done." Work is either done according to the Definition of Done or it is not done. Option D is incorrect because the Definition of Done does not describe Scrum events. It applies to the Increment and defines the quality measures required for completeness.

In Scrum, the Definition of Done is a critical tool for quality, transparency, and forecasting realistic Sprint scope.

NEW QUESTION # 113

Who should make sure everyone on the Development Team does his or her tasks for the Sprint?

- A. All of the above.
- B. The Product Owner.
- C. The Development Team.
- D. The Scrum Master.
- E. The Project Manager.

Answer: C

Explanation:

According to the Scrum Guide, the Developers are self-organizing and decide how to turn Product Backlog items into an Increment of value. No one tells them how to do their work. The Developers are accountable for creating a plan for the Sprint, the Sprint Backlog. The other roles are not responsible for making sure everyone on the Development Team does their tasks for the Sprint.

NEW QUESTION # 114

Multiple Scrum Teams working on the same project must have the same Sprint start date.

- A. False
- B. True

Answer: A

Explanation:

Different scrum teams working on the same product may have different sprint cadence, and different start and end times.

NEW QUESTION # 115

What is the recommended size for a Scrum Team? (Choose the best answer.)

- A. At least 7.
- B. 10 or fewer.
- C. 0
- D. 7 plus or minus 3.

Answer: B

Explanation:

The recommended size for a Scrum Team is 10 or fewer people, as stated in the Scrum Guide: "The recommended size of a Scrum Team is small enough to remain nimble and large enough to complete significant work within a Sprint, typically 10 or fewer people."

NEW QUESTION # 116

The Development Team should have all the skills needed to:

- A. Turn Product Backlog items into an Increment of potentially releasable product functionality.
- B. Do all of the development work, except for specialized testing that requires additional tools and environments.
- C. Complete the project within the date and cost as calculated by the Product Owner.

Answer: A

Explanation:

According to the Scrum Guide 1, an Increment is a concrete stepping stone toward the Product Goal. Each Increment is additive to all prior Increments and thoroughly verified, ensuring that all Increments work together. In order to provide value, an Increment must be usable. Multiple Increments may be created within a Sprint. The sum of the Increments is presented at the Sprint Review thus supporting empiricism. However, an Increment may be delivered to stakeholders prior to the end of the Sprint. The Sprint Review should never be considered a gate to releasing value. Therefore, in order to turn Product Backlog items into an Increment of potentially releasable product functionality, the Development Team should have all the skills needed.
