

Guaranteed ISO-IEC-27002-Foundation Success - Latest ISO-IEC-27002-Foundation Cram Materials

Don't mind what others say, trust you and make a right choice. We hope that you understand our honesty and cares, so we provide free demo of ISO-IEC-27002-Foundation exam software for you to download before you purchase our dump so that you are rest assured of our dumps. After your payment of our dumps, we will provide more considerate after-sales service to you. Once the update of ISO-IEC-27002-Foundation Exam Dump releases, we will inform you the first time. You will share the free update service of ISO-IEC-27002-Foundation exam software for one year after you purchased it.

Eliminates confusion while taking the ISO/IEC 27002 Foundation Exam exam. Prepares you for the format of your ISO-IEC-27002-Foundation exam dumps, including multiple-choice questions and fill-in-the-blank answers. Comprehensive, up-to-date coverage of the entire ISO-IEC-27002-Foundation curriculum. ISO-IEC-27002-Foundation practice questions are based on recently released ISO-IEC-27002-Foundation Exam Objectives. Includes a user-friendly interface allowing you to take the ISO-IEC-27002-Foundation practice exam on your computers, like downloading the PDF, Web-Based ISO-IEC-27002-Foundation practice test Exams-boost, and Desktop ISO-IEC-27002-Foundation practice exam.

Latest PECB ISO-IEC-27002-Foundation Cram Materials, Latest ISO-IEC-27002-Foundation Material

Free demo is available if you purchase ISO-IEC-27002-Foundation exam dumps from us, so that you can have a better understanding of what you are going to buy. If you are satisfied with the free demo and want to buying ISO-IEC-27002-Foundation exam dumps from us, you just need to add to cart and pay for it. You can receive the download link and password within ten minutes for ISO-IEC-27002-Foundation Exam Materials, so that you can start your practicing as quickly as possible. In addition, in order to build up your confidence for the ISO-IEC-27002-Foundation exam dumps, we are pass guarantee and money back guarantee. If you fail to pass the exam, we will give you full refund.

PECB ISO-IEC-27002-Foundation Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Explain the fundamental concepts of information security, cybersecurity, and privacy based on ISO • IEC 27002: This domain covers the core principles and definitions that underpin information security, including the concepts of confidentiality, integrity, and availability. It focuses on how ISO • IEC 27002 frames cybersecurity and privacy as foundational elements of an organization's overall security posture.

Topic 2	<ul style="list-style-type: none"> • Interpret the ISO • IEC 27002 organizational, people, physical, and technological controls in the specific context of an organization: This domain covers the four control categories defined in ISO • IEC 27002 organizational, people, physical, and technological and how each applies to real-world organizational environments. It requires understanding how to read, interpret, and contextualize these controls based on an organization's specific needs, risks, and operating conditions.
Topic 3	<ul style="list-style-type: none"> • Discuss the relationship between ISO • IEC 27001, ISO • IEC 27002, and other standards and regulatory frameworks: This domain examines how ISO • IEC 27002 functions as a code of practice that supports the requirements set out in ISO • IEC 27001, and how both standards interact with other relevant frameworks. It also addresses how organizations align these standards with applicable laws, regulations, and industry-specific requirements.

PECB ISO/IEC 27002 Foundation Exam Sample Questions (Q15-Q20):

NEW QUESTION # 15

Which control of ISO/IEC 27002 aims to ensure the correct and secure operation of information processing facilities?

- A. Control 7.2 Physical entry
- B. Control 5.35 Independent review of information security
- C. Control 5.37 Documented operating procedures

Answer: C

Explanation:

Control 5.37, Documented operating procedures, aims to ensure the correct and secure operation of information processing facilities. Operating procedures translate security and operational requirements into repeatable instructions for administrators, operators, support teams, and users. They can cover system startup and shutdown, backup, restoration, logging, error handling, media handling, job scheduling, maintenance, incident escalation, access administration, and secure processing steps. Without documented procedures, operations become inconsistent and dependent on individual memory or informal practice, increasing the likelihood of mistakes, outages, unauthorized changes, or insecure handling. Control 7.2, Physical entry, protects secure physical areas by controlling access to facilities, but it does not define operational procedures.

Control 5.35, Independent review of information security, assesses whether the information security approach remains suitable, adequate, and effective, but it does not provide the day-to-day operating instructions. ISO/IEC 27002 places documented procedures in the organizational control group because reliable operation requires governance, clarity, and repeatability. Therefore, option B is the verified answer. References
/Chapters: ISO/IEC 27002:2022, Control 5.37 Documented operating procedures; Control 7.2 Physical entry; Control 5.35 Independent review of information security.

NEW QUESTION # 16

Which statement below describes the principle of confidentiality?

- A. Property of being accessible and usable upon demand by an authorized entity
- B. Property of accuracy and completeness
- C. Property that information is not made available or disclosed to unauthorized individuals, entities, or processes

Answer: C

Explanation:

Confidentiality means that information is protected from unauthorized disclosure or availability. The correct statement is option A because it expresses the essential confidentiality concept: information must not be made available or disclosed to unauthorized individuals, entities, or processes. ISO/IEC 27002 supports confidentiality through controls such as information classification, labelling, access control, identity management, authentication, cryptography, data masking, information transfer rules, and data leakage prevention. The purpose is to ensure that only approved users, systems, or processes can view or receive information according to business need and authorization. Option B describes integrity, because accuracy and completeness relate to whether information remains correct and unaltered. Option C describes availability, because accessibility and usability on demand relate to authorized access when needed. In ISO/IEC 27002, many controls are mapped to confidentiality, integrity, and availability through

control attributes. A confidentiality breach can occur through excessive internal access, accidental disclosure, lost media, weak access permissions, exposed credentials, or insecure transfer. References/Chapters: ISO/IEC 27002:2022, Clause 4 control attributes; Control 5.12 Classification of information; Control 5.15 Access control; Control 8.24 Use of cryptography.

NEW QUESTION # 17

Which information security principle is compromised by accidental changes in information?

- A. Integrity
- B. Availability
- C. Confidentiality

Answer: A

Explanation:

Accidental changes compromise integrity. Integrity is the property that information remains accurate, complete, and protected against unauthorized or improper modification. Even when a change is accidental rather than malicious, the effect is the same from an integrity perspective: the information may no longer be trustworthy. ISO/IEC 27002 supports integrity through many controls, including access control, change management, configuration management, backup, logging, secure coding, malware protection, segregation of duties, and separation of development, test, and production environments. Availability would be affected if information or systems were not accessible or usable when required. Confidentiality would be affected if information were disclosed or made available to unauthorized parties. The question specifically mentions accidental changes, not unavailability or disclosure, so integrity is the correct principle. This distinction is central to information security because different principles require different controls. For example, preventing accidental changes may require access restrictions, validation, change approval, version control, monitoring, and recovery procedures. References/Chapters: ISO/IEC 27002:2022, Clause 4 control attributes; Control 8.32 Change management; Control 8.9 Configuration management; Control 8.13 Information backup.

NEW QUESTION # 18

What is the main purpose of Control 5.12 Classification of information of ISO/IEC 27002?

- A. To ensure authorized access and prevent unauthorized access to information
- B. To ensure identification and understanding of protection needs of information based on its importance
- C. To facilitate the communication of classification of information and support automation of information processing and management

Answer: B

Explanation:

The main purpose of Control 5.12, Classification of information, is to ensure that protection needs are identified and understood based on the importance of information. Classification gives information a defined sensitivity or value level, such as public, internal, confidential, or restricted, depending on the organization's scheme. This classification then drives handling rules, access restrictions, labelling, retention, transfer methods, storage requirements, encryption decisions, and disposal practices. Option B describes the purpose of Control 5.13, Labelling of information, which communicates classification and can support automated information handling. Option C describes the general purpose of access control, especially Control 5.15 and related access rights controls. Classification is foundational because the organization cannot apply proportionate protection unless it understands the value, sensitivity, criticality, legal status, and business impact of the information. ISO/IEC 27002 expects classification to consider confidentiality, integrity, availability, and relevant interested-party requirements. Therefore, option A is the verified answer because it precisely matches the purpose of classifying information. References/Chapters: ISO/IEC 27002:2022, Control 5.12 Classification of information; Control 5.13 Labelling of information; Control 5.15 Access control.

NEW QUESTION # 19

What should the organization's management define and approve to ensure appropriate direction and support for information security?

- A. A risk management program
- B. An information policy
- C. The list of assets that should be protected

Answer: B

Explanation:

Management should define and approve an information security policy to provide direction and support for information security. In ISO/IEC 27002:2022, Control 5.1 requires policies for information security to be defined, approved by management, published, communicated to relevant personnel and interested parties, and reviewed at planned intervals or when significant changes occur. The policy establishes management intent, expectations, responsibilities, and the basis for more detailed topic-specific policies. Option B, a risk management program, is important, but it is not the specific item required by this control to provide overall direction and support. Option C, a list of assets, is also important because asset inventories support control implementation, but it does not replace the policy framework. The policy is the governing statement that aligns information security with business objectives, legal requirements, and risk treatment. It gives authority to procedures, standards, and operational controls. Therefore, the correct answer is option A, understood as the organization's information security policy. References/Chapters: ISO/IEC 27002:2022, Control 5.1 Policies for information security; Control 5.2 Information security roles and responsibilities; Control 5.9 Inventory of information and other associated assets.

NEW QUESTION # 20

.....

The experts of our company are checking whether our ISO-IEC-27002-Foundation test quiz is updated or not every day. We can guarantee that our ISO-IEC-27002-Foundation exam torrent will keep pace with the digitized world by the updating system. We will try our best to help our customers get the latest information about study materials. If you are willing to buy our ISO-IEC-27002-Foundation Exam Torrent, there is no doubt that you can have the right to enjoy the updating system. Once our ISO-IEC-27002-Foundation exam dumps are updated, you will receive the newest information of our ISO-IEC-27002-Foundation test quiz in time. So quickly buy our ISO-IEC-27002-Foundation exam prep now!
