ActualTestsQuiz JS-Dev-101 products are honored by thousands, considerably recognized across the industry. Successful candidates preferably suggest our products as they provide the best possible returns for your invested money. Our professionals have devoted themselves to deliver the required level of efficiency for our customers. Our well-repute in industry highlights our tremendous success record and makes us incomparable choice for JS-Dev-101 Exams preparation. 100% guaranteed success for all JS-Dev-101 exams is offered at ActualTestsQuiz, marks key difference with competing brands. Your investment with ActualTestsQuiz never takes any down turn as we owe the whole responsibility for any kind of loss that occurs through your failure.

Salesforce Certified JavaScript Developer - Multiple Choice Sample Questions (Q111-Q116):

NEW QUESTION # 111

Universal Containers recently launched its new landing page to host a crowd-funding campaign. The page uses an external library to display some third-party ads. Once the page is fully loaded, it creates more than 50 new HTML items placed randomly inside the DOM, like the one in the code below:

```
<!-- This is an ad -->
<div class="ad-library-item ad-hidden" onload="myFunction()"

</div>
```

All the elements include the same ad-library-item class. They are hidden by default, and they are randomly displayed while the user navigates through the page.

- A. Use the browser console to execute a script that prevents the load event to be fired.
- **B. Use the browser to execute a script that removes all the element containing the class ad-library-item.**
- C. Use the DOM inspector to prevent the load event to be fired.
- D. Use the DOM inspector to remove all the elements containing the class ad-library-item.

Answer: B

NEW QUESTION # 112

Which code statement below correctly persists an object in local Storage ?

- **A. const setLocalStorage = (storageKey, jsObject) => {window.localStorage.setItem(storageKey, JSON.stringify(jsObject));}**
- B. const setLocalStorage = (jsObject) => {window.localStorage.connectObject(jsObject);}
- C. const setLocalStorage = (storageKey, jsObject) => {window.localStorage.persist(storageKey, jsObject);}
- D. const setLocalStorage= (jsObject) => {window.localStorage.setItem(jsObject);}

Answer: A

NEW QUESTION # 113

Refer to the code below:

```
Let inArray=[ [ 1, 2 ], [ 3, 4, 5 ] ];
```

Which two statements result in the array [1, 2, 3, 4, 5] ?

Choose 2 answers

- **A. []. Concat (... inArray);**
- B. []. concat.apply(inArray, []);
- C. []. concat ([...inArray]);
- **D. []. Concat.apply ([], inArray);**

Answer: A,D

NEW QUESTION # 114

A developer has the function, shown below, that is called when a page loads.

```
function onload() {  
  console.log("Page has loaded!");  
}
```

Where can the developer see the log statement after loading the page in the browser?

- A. Terminal running the web server.
- B. Browser performance toots
- **C. Browser javaScript console**
- D. On the webpage.

Answer: C

NEW QUESTION # 115

A developer at Universal Containers creates a new landing page based on HTML, CSS, and JavaScript.

To ensure that visitors have a good experience, a script named `personalizeWebsiteContent` needs to be executed to do some custom initialization when the webpage is fully loaded with HTML content and all related files.

Which statement should be used to call `personalizeWebsiteContent` based on the above business requirement?

- A. `document.addEventListener('DOMContentLoaded', personalizeWebsiteContent);`
- **B. `window.addEventListener('load', personalizeWebsiteContent);`**
- C. `window.addEventListener('onload', personalizeWebsiteContent);`
- D. `document.addEventListener('DOMContentLoaded', personalizeWebsiteContent);`

Answer: B

Explanation:

Comprehensive and Detailed Explanation From JavaScript Knowledge:

Two key browser events:

`DOMContentLoaded` (fired on document):

Fired when the HTML document has been completely loaded and parsed, without waiting for stylesheets, images, and subresources to finish loading.

`load` (fired on window):

Fired when the entire page is fully loaded, including all dependent resources such as stylesheets and images.

The requirement states:

"... when the webpage is fully loaded with HTML content and all related files." That matches the semantics of the `load` event on the window object.

So the correct code is:

```
window.addEventListener('load', personalizeWebsiteContent);
```

Why others are incorrect:

A: `DOMContentLoaded` fires earlier, when HTML is parsed, but before all related files (images, some styles, etc.) are guaranteed to be loaded.

B: `'onDOMContentLoaded'` is not a valid event name; the event is `'DOMContentLoaded'`.

D: When using `addEventListener`, the event type is `'load'`, not `'onload'`. `'onload'` is the name of the handler property (`window.onload = ...`), not the event string.

Relevant concepts: `window.load` event, `DOMContentLoaded`, `addEventListener` syntax, page load lifecycle.

NEW QUESTION # 116

.....

Keep making progress is a very good thing for all people. If you try your best to improve yourself continuously, you will that you will harvest a lot, including money, happiness and a good job and so on. The JS-Dev-101 preparation exam from our company will help you keep making progress. Choosing our JS-Dev-101 study material, you will find that it will be very easy for you to overcome your shortcomings and become a persistent person. If you decide to buy our JS-Dev-101 study questions, you can get the chance that you will pass your JS-Dev-101 exam and get the certification successfully in a short time.
