

# 2V0-17.25 Minimum Pass Score, 2V0-17.25 New Exam Braindumps

DOWNLOAD the newest BootcampPDF 2V0-17.25 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=11iai-w7snDBl2coDZm4Ho6axf-wCy5uM>

In order to serve you better, we have a complete system for you if you choose us. We have free demo for 2V0-17.25 training materials for you to have a try. If you have decided to buy 2V0-17.25 exam dumps of us, just add them to your cart, and pay for it, our system will send the downloading link and password to you within ten minutes, and if you don't receive, just contact us, we will solve this problem for you as quickly as possible. For 2V0-17.25 Training Materials, we also have after-service, if you have questions about the exam dumps, you can contact us by email.

## VMware 2V0-17.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.</li></ul>

Topic 4	<ul style="list-style-type: none"> <li>• Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.</li> </ul>

## 2V0-17.25 New Exam Braindumps - 2V0-17.25 Valid Braindumps Questions

With our 2V0-17.25 study materials, all your agreeable outcomes are no longer dreams for you. And with the aid of our 2V0-17.25 exam preparation to improve your grade and change your states of life and get amazing changes in career, everything is possible. It all starts from our 2V0-17.25 learning questions. Come and buy our 2V0-17.25 practice engine, you will be confident and satisfied with it and have a brighter future.

### VMware Cloud Foundation 9.0 Administrator Sample Questions (Q84-Q89):

#### NEW QUESTION # 84

Which of the following is the default file system used for virtual machine datastores on block storage in VMware vSphere?

- A. NFS
- B. EXT4
- C. VMFS
- D. ZFS

**Answer: C**

Explanation:

VMFS (Virtual Machine File System) is VMware's proprietary clustered file system for block-based storage. NFS is used for file-based storage, while ZFS and EXT4 are not native to ESXi for VMFS datastores.

#### NEW QUESTION # 85

An administrator needs to ensure that specific virtual machines within a VMware Cloud Foundation (VCF) environment use storage that can tolerate at least two host failures within a vSAN cluster. Due to financial limitations, the configuration used must prioritize providing the highest level of usable disk space for the datastore.

Which three steps should be performed to meet the requirements? (Choose three.)

- A. Configure the policy to use thin provisioning.
- B. Set Failures to Tolerate to "2 failures - RAID-1 (Mirroring)" in the policy configuration.
- C. **Create a new VM Storage Policy in the vSphere Client.**
- D. **Set Failures to Tolerate to "2 failures - RAID-6 (Erasure Coding)" in the policy configuration.**
- E. Reconfigure the existing Default Storage Policy in the vSphere Client.
- F. **Apply the storage policy to the target VMs.**

**Answer: C,D,F**

Explanation:

To meet the requirement for at least two host failures tolerance while also maximizing usable disk space in a vSAN cluster, the recommended configuration is to use RAID-6 (Erasure Coding) with a "2 failures" policy.

The necessary steps as described in VMware documentation are:

Create a new VM Storage Policy in the vSphere Client (D): Administrators should create a new policy rather than modify the default, to apply specific rules for select VMs.

Set Failures to Tolerate to "2 failures - RAID-6 (Erasure Coding)" in the policy configuration (C): This setting ensures that data can survive up to two host failures and provides higher usable capacity than RAID-1 mirroring.

Apply the storage policy to the target VMs (B): The new policy must be applied to the required virtual machines to ensure they benefit from the specified level of protection.

Using RAID-6 (Erasure Coding) is preferred for capacity efficiency, especially when compared to RAID-1, and aligns with the financial consideration of maximizing usable disk space. Thin provisioning is not directly related to fault tolerance or disk space efficiency in the context of failures to tolerate, and modifying the default policy is not best practice for granular requirements.

## NEW QUESTION # 86

An administrator is responsible for managing a VMware Cloud Foundation (VCF) fleet. The administrator has been tasked with the following:

- Ensure that newly deployed Virtual Machines create a DNS A and DNS PTR Record in DNS.
- Create the DNS records before each Virtual Machine is deployed.
- If a deployment fails, ensure that the created DNS record is deleted.
- Only remove the DNS records for each Virtual Machine after it is destroyed.
- Every workflow must be allowed to complete before starting any additional workflow for the same event topic.

The administrator has already completed the following tasks:

-Created two VCF Operations Orchestrator Workflows with corresponding Event Subscriptions:

- Create DNS Records
- Delete DNS Records
- Created a new blueprint to deploy a Virtual Machine:
- Added two string inputs, hostname and domainName
- Added hostname:'\$ {input.hostname}' as a custom property of the Virtual Machine resource.
- Added domainName:'\$ {input.domainName}' as a custom property of the Virtual Machine resource.

What must the administrator configure within the Event subscription to ensure that the DNS record is only created when the domain name is provided?

- A. Add the event.data.customProperties ['domainName'] != null condition to the Add DNS Records and Delete DNS Records subscriptions.
- B. Add the Delete DNS Records workflow as the Recovery Workflow of the Add DNS Records subscription.
- C. Enable the Block execution of events in topic option in the Add DNS Records and Delete DNS Records subscriptions.
- D. Add the event.data.customProperties ['hostname'] != null condition to the Add DNS Records and Delete DNS Records subscriptions.

### Answer: A

Explanation:

Configuring a condition that checks for the presence of the domainName custom property ensures that the event subscription only triggers when a domain name is provided. This guarantees that DNS record creation and deletion workflows run exclusively for virtual machines where the required domain information exists.

## NEW QUESTION # 87

An administrator is responsible for the management of a VMware Cloud Foundation (VCF) environment that consists of two VCF Automation tenants, Production and Development.

The administrator has been tasked with the following:

- Configure a new Project within the Development tenant to support the creation of a new virtual machine-based application.
- Ensure that, as the development team onboards new members, the ongoing management overhead of the project membership is minimized.

Which four of the following steps should the administrator take to meet the objective? (Choose four.)

- A. Log in to the Development tenant as an Organization Administrator.
- B. Assign both Project Administrators and Project Members to the Project using Active Directory Users.
- C. Log in to the Development tenant as a Project Administrator.
- D. Assign both Project Administrators and Project Members to the Project using Active Directory Groups.
- E. Assign at least one Namespace to the Project.
- F. Create a new Project.
- G. Assign at least one Cloud Zone to the Project.

## Answer: C,D,F,G

Explanation:

According to the VCF Automation 9.0 Guide, project creation requires administrative login at the tenant level: "To create a new project, log in as a Project Administrator of that tenant." . After creation, projects must be mapped to Cloud Zones to determine compute placement. The document also emphasizes: "For scalable user management, assign groups from Active Directory to roles within projects rather than individual users." This reduces management overhead as new members join. Namespaces are not mandatory unless Kubernetes Supervisor is being integrated, which is not required in this scenario. Likewise, logging in as an Organization Administrator (F) is not needed for tenant-level project creation. Therefore, the correct steps are: Log in as Project Admin (A), Create a Project (D), Assign a Cloud Zone (B), and Use Active Directory Groups for membership (G). This ensures minimal ongoing administrative effort.

## NEW QUESTION # 88

When planning a VMware by Broadcom solution, which of the following factors should be considered during capacity planning for CPU resources?

- A. VM workload profiles and peak utilization rates
- B. Number of concurrent virtual network switches per host
- C. Number of physical cores in each host
- D. Business continuity and disaster recovery requirements

## Answer: A,C,D

Explanation:

Capacity planning considers the physical CPU resources, expected workload patterns, and resilience needs (like disaster recovery strategies). Network switches (option B) relate more to network design rather than CPU capacity planning.

## NEW QUESTION # 89

.....

BootcampPDF is regarded as an acclaimed 2V0-17.25 dumps study material provider for certification exams that includes a range of helping materials, programs and pathways to ease your tensions of 2V0-17.25 exam preparation. The prime objective in developing 2V0-17.25 exam dumps is to provide you the unique opportunity of getting the best information in the possibly lesser content. It not only saves your time but also frees you from the hassle of going through tomes of books and other study material. Shorn of unnecessary burden, you better focus what is extremely important to pass exam; hence you increase your chances of success with 2V0-17.25 Exam Questions than other that of candidates.
