By doing this the successful CISM candidates can gain several personal and professional benefits in their career and achieve their professional career objectives in a short time period. To attain this you just need to enroll in the ISACA CISM Certification Exam

and put all your efforts to pass this challenging CISM exam with good scores.

ISACA Certified Information Security Manager Sample Questions (Q429-Q434):

NEW QUESTION # 429

What is the PRIMARY objective of a post-event review in incident response?

- A. Improve the response process
- B. Preserve forensic data
- C. Adjust budget provisioning
- D. Ensure the incident is fully documented

Answer: A

Explanation:

Section: INCIDENT MANAGEMENT AND RESPONSE

Explanation:

The primary objective is to find any weakness in the current process and improve it. The other choices are all secondary.

NEW QUESTION # 430

Information security governance is PRIMARILY driven by:

- A. litigation potential.
- B. regulatory requirements.
- C. business strategy.
- D. technology constraints.

Answer: C

Explanation:

Governance is directly tied to the strategy and direction of the business. Technology constraints, regulatory requirements and litigation potential are all important factors, but they are necessarily in line with the business strategy.

NEW QUESTION # 431

Which of the following is MOST important to convey to employees in building a security risk-aware culture?

- A. Understanding an information asset's value is critical to risk management.
- B. Personal information requires different security controls than sensitive information.
- C. Employee access should be based on the principle of least privilege.
- D. The responsibility for security rests with all employees.

Answer: D

Explanation:

Explanation

= The most important message to convey to employees in building a security risk-aware culture is that the responsibility for security rests with all employees, not just the information security function or the management. A security risk-aware culture is a collective mindset of the people in the organization working every day to protect the enterprise and its information assets from internal and external threats. A security risk-aware culture requires the workforce to know the security risks and the processes for avoiding or mitigating them, and to make thoughtful decisions that align with security policies and standards. A security risk-aware culture also incorporates a broader corporate culture of day-to-day actions that encourage employees to report security incidents, share security best practices, and participate in security awareness and training programs. A security risk-aware culture helps to reduce the human factor that causes 90 percent of all cyberattacks, and to offset the impact of corrupted or lost data, decreased revenue, regulatory fines, and reputational damage. A security risk-aware culture turns people from assets that must be protected into assets that actively contribute to the cybersecurity and risk management posture and elevate security to being a business enabler rather than a business impediment123.

Personal information requires different security controls than sensitive information is a true statement, but it is not the most important message to convey to employees in building a security risk-aware culture. Personal information is any information that can identify or

relate to a natural person, such as name, address, email, phone number, social security number, etc. Sensitive information is any information that is confidential, proprietary, or has a high value or impact to the organization, such as trade secrets, financial data, customer data, intellectual property, etc. Different types of information may have different legal, regulatory, contractual, or ethical obligations to protect them from unauthorized access, use, disclosure, modification, or destruction.

Therefore, different security controls may be applied to personal and sensitive information based on their classification, such as encryption, access control, retention, disposal, etc. However, this message does not address the broader concept of security risk-aware culture, which is not limited to information classification and protection, but also encompasses the behaviors, attitudes, and values of the employees towards security.

Employee access should be based on the principle of least privilege is a good practice, but it is not the most important message to convey to employees in building a security risk-aware culture. The principle of least privilege states that users should only have the minimum level of access and permissions that are necessary to perform their job functions, and no more. This principle helps to reduce the risk of unauthorized or inappropriate actions, such as data leakage, fraud, sabotage, etc., by limiting the exposure and impact of user activities. However, this message does not capture the essence of security risk-aware culture, which is not only about access control, but also about the awareness, understanding, and commitment of the employees to security.

Understanding an information asset's value is critical to risk management is a valid point, but it is not the most important message to convey to employees in building a security risk-aware culture. Understanding an information asset's value is essential to determine the potential impact and likelihood of a security risk, and to prioritize the appropriate risk response strategies, such as avoidance, mitigation, transfer, or acceptance.

However, this message does not reflect the holistic nature of security risk-aware culture, which is not only about risk assessment, but also about risk communication, risk treatment, and risk monitoring. NEW QUESTION # 432

Recovery time objectives (RTOs) are an output of which of the following?

- A. Service level agreement (SLA)
- B. Business continuity plan (BCP)
- **C. Business impact analysis (BIA)**
- D. Disaster recovery plan (DRP)

Answer: C

Explanation:

Business impact analysis (BIA) is the process that provides the output of recovery time objectives (RTOs), which are the maximum acceptable time frames for restoring business functions or processes after a disruption. Business continuity plan (BCP) is the document that describes the strategies and procedures for ensuring the continuity of critical business functions or processes in the event of a disruption. Disaster recovery plan (DRP) is the document that describes the technical steps and resources for restoring IT systems and data in the event of a disruption. Service level agreement (SLA) is the document that defines the expectations and obligations between a service provider and a service consumer, such as availability, performance, and security.
