Overall obtaining Cisco Certified Design Expert (CCDE) Written Exam (400-007) certificate can be a valuable investment in your professional career. As it can help you to stand out in a competitive market, more career opportunities, and advancement of your career. To gain all these advantages you just need to enroll in the Cisco 400-007 Certification Exam and put all your efforts to pass this challenging 400-007 exam with flying colors.

To prepare for the CCDE certification exam, candidates must have a thorough understanding of network design principles, including network topology, protocols, and technologies. They must also be familiar with network design methodologies, including the Cisco Lifecycle Services approach. Additionally, candidates must be able to demonstrate their ability to design complex networks that meet specific business requirements and are scalable, secure, and reliable.

400-007 Trustworthy Source - 400-007 Online Test

Quitters never win and winners never quit. If you are determined to clear 400-007 exam and obtain a certification you shouldn't give up because of one failure. If you are willing, our Cisco 400-007 valid exam simulations file can help you clear exam and regain confidence. Every year there are thousands of candidates choosing our products and obtain certifications so that our 400-007 valid exam simulations file is famous for its high passing-rate in this field. If you want to pass exam one-shot, you shouldn't miss our files.

Cisco 400-007 certification exam is an essential certification for professionals who are seeking to validate their expertise in network design. Cisco Certified Design Expert (CCDE) Written Exam certification exam is a part of the CCDE v3.0 certification, which is one of the most prestigious certifications in the networking industry. Candidates who pass the exam demonstrate their ability to design and implement complex network solutions that meet the business requirements of organizations.

Cisco 400-007 exam is a challenging certification test designed for experienced network designers and architects who want to demonstrate their advanced knowledge and skills in network design principles, methodologies, and best practices. 400-007 Exam is part of the CCDE (Cisco Certified Design Expert) certification program, which focuses on expert-level network design and

engineering skills. The CCDE certification is widely recognized as one of the most prestigious and sought-after credentials in the networking industry, and passing the 400-007 exam is a key step towards achieving this certification.

Cisco Certified Design Expert (CCDE) Written Exam Sample Questions (Q81-Q86):

NEW QUESTION # 81

How can EIGRP topologies be designed to converge as fast as possible in the event of a point-to-point link failure?

- A. Limit the query domain by use of summarization.
- B. Build neighbor adjacencies in a triangulated fashion.
- C. Build neighbor adjacencies in squared fashion.
- D. Limit the query domain by use of distribute lists.
- E. Limit the query domain by use of default routes.

Answer: A

NEW QUESTION # 82

During a pre-sales meeting with a potential customer, the customer CTO asks a question about advantages of controller-based networks versus a traditional network. What are two advantages to mention? (Choose two.)

- A. distributed control plane
- B. consistent device configuration
- C. programmatic APIs available per device
- D. per device forwarding tables
- E. abstraction of individual network devices

Answer: B,E

Explanation:

Abstraction of individual network devices: In a controller-based network, the network controller abstracts the individual devices, simplifying management and enabling centralized control and visibility. This leads to easier configuration and troubleshooting.

Consistent device configuration: A controller-based network ensures that configurations are consistent across the network, as policies and configurations can be applied centrally through the controller, reducing the risk of misconfigurations.

NEW QUESTION # 83

Organizations that embrace Zero Trust initiatives ranging from business policies to technology infrastructure can reap business and security benefits. Which two domains should be covered under Zero Trust initiatives?

(Choose two)

- A. workplace
- B. workload
- C. workspace
- D. work domain
- E. workgroup

Answer: A,B

Explanation:

* Zero Trust principles cover multiple domains:

* A (Workload): Securing application workloads regardless of location.

* C (Workplace): Securing user access to services across office, remote, or hybrid work models.

* Zero Trust design ensures authentication, authorization, and policy enforcement at every access point for both users and applications.

Why other options are incorrect:

* B, D, E: These terms are not recognized Zero Trust domains in CCDE or industry frameworks.

-

NEW QUESTION # 84

SD-WAN can be used to provide secure connectivity to remote offices, branch offices, campus networks, data centers, and the cloud over any type of IP-based underlay transport network. Which two statements describe SD WAN solutions? (Choose two.)

- A. Control and data forwarding planes are kept separate.
- B. SD-WAN networks are inherently protected against slow performance.
- C. Solutions include centralized orchestration, control, and zero-touch provisioning.
- D. Improved operational efficiencies result in cost savings.
- E. Solutions allow for variations of commodity and specialized switching hardware.

Answer: A,C

NEW QUESTION # 85

The Layer 3 control plane steers traffic toward destinations. Which two techniques offer a more dynamic, flexible, controlled, and secure control plane design in service provider networks? (Choose two.)

- A. Access control lists
- B. Prefix lists
- C. Firewalls
- D. QoS policy propagation with BGP
- E. Remote black-holing trigger

Answer: D,E

Explanation:

* C (QoS policy propagation with BGP - QPPB): Allows QoS policies to be dynamically applied based on BGP routing information, integrating policy control into routing decisions.

* D (Remote black-holing trigger): Enables dynamic mitigation of attacks (e.g., DDoS) by injecting blackhole routes through BGP to selectively drop malicious traffic upstream.

Other options explained:

* A/B/E: Static policy mechanisms that lack dynamic flexibility and responsiveness in modern service provider designs.

NEW QUESTION # 86
