Splunk Core Certified Power User Exam Sample Questions (Q161-Q166):

NEW QUESTION # 161

Which of the following options will define the first event in a transaction?

- A. firstevent
- **B. startswith**
- C. with
- D. startingwith

Answer: B

Explanation:

The correct answer is A. startswith.

The explanation is as follows:

The transaction command is used to find transactions based on events that meet various constraints¹².

Transactions are made up of the raw text (the `_raw` field) of each member, the time and date fields of the earliest member, as well as the union of all other fields of each member¹.

The `startswith` option is used to define the first event in a transaction by specifying a search term or an expression that matches the event¹³.

For example, `| transaction clientip JSESSIONID startswith="view"` will create transactions based on the `clientip` and `JSESSIONID` fields, and the first event in each transaction will contain the term "view" in the `_raw` field².

NEW QUESTION # 162

Using the export function, you can export search results as _____. (Select all that apply)

- A. A php file
- B. Html
- C. Json
- D. Xml

Answer: C,D

Explanation:

Using the export function, you can export search results as XML or JSON². The export function allows you to save your search results in a structured format that can be used by other applications or tools². You can use the `output_mode` parameter to specify whether you want to export your results as XML or JSON². Therefore, options A and B are correct, while options C and D are incorrect because they are not formats that you can export your search results as.

NEW QUESTION # 163

Which of the following statements describe calculated fields? (Choose all that apply.)

- A. Calculated fields can be based on an extracted field.
- B. Calculated fields can be used in the search bar.
- C. Calculated fields are shortcuts for performing calculations using the `eval` command.
- D. Calculated fields can only be applied to host and sourcetype.

Answer: A,C

NEW QUESTION # 164

Information needed to create a GET workflow action includes which of the following? (select all that apply.)

- A. A label that will appear in the Event Action menu at search time.
- B. A URI where the user will be directed at search time.
- C. A name for the URI where the user will be directed at search time.
- D. A name of the workflow action

Answer: A,B,D

NEW QUESTION # 165

Which of the following statements describes the command below (select all that apply) `sourcetype-access_combined | transaction JSESSIONID`

- A. An additional field named `eventcount` is created.
- B. Events with the same `JSESSIONID` will be grouped together into a single event.
- C. An additional field named `maxspan` is created.
- D. An additional field named `duration` is created.

Answer: A,D

NEW QUESTION # 166
