dbt Labs dbt Analytics Engineering Certification Exam Sample Questions (Q83-Q88):

NEW QUESTION # 83

Your dbt project contains a series of interlinked models (A, B, C, D) where some models have downstream dependencies on upstream models. While running dbt run, model C fails due to a data validation test you added. Which of the following statements are potentially true?

- A. Model C has stale data but can still be queried.
- B. The failure of Model C triggers an automatic rollback of Model A and Model B.
- C. Model D cannot be built until the issue with Model C is resolved.
- D. Model A and Model B are unaffected and have the most up-to-date data.

Answer: A,C,D

Explanation:

A is true because upstream models that successfully complete are unaffected by downstream failures. B is true due to the dependency structure of the DAG. Model D cannot be created if its prerequisite, Model C, fails. C is false. dbt models don't automatically roll back upon failure unless you explicitly program this. D is true. Even though the model wasn't created successfully, the prior version (if it existed) remains in the warehouse

NEW QUESTION # 84

You're considering adding workflow orchestration to manage dependencies between your dbt project, data loading tasks, and the triggering of downstream BI updates. Which of the following types of tools would be most suitable for this?

- A. General-purpose workflow orchestration tools (e.g., Airflow, Prefect)
- B. CI/CD platforms
- C. Data quality monitoring tools
- D. Data lineage tools

Answer: A

Explanation:

While options B (CI/CD) and C (data quality monitoring) are potentially relevant parts of the ecosystem, general-purpose workflow orchestration tools are directly designed to manage dependencies and task sequences across various technologies.

NEW QUESTION # 85

A raw source table undergoes periodic bulk updates that temporarily disrupt dependent models when they are running. Which of the following strategies might help prevent errors in these models? (Choose two)

- A. Add retries with a delay to any 'ref calls referencing this table.
- B. Schedule dbt jobs to run after the bulk updates are typically complete.
- C. Implement incremental materializations if possible.
- D. Utilize snapshots to capture the state of the raw table before the bulk updates.

Answer: B,D

Explanation:

Scheduling and snapshots help mitigate timing issues. Incremental models are useful generally but don't address this specific scenario. Retries might mask the disruption instead of resolving it.

NEW QUESTION # 86

You have a complex dbt model that is essential for production reporting. To minimize the risk of breaking this model during

development, what strategy might you employ?

- A. Create a duplicate model in production and only sync changes once they're fully tested-
- B. Write extensive tests targeting this model in your production environment
- C. Rely on your data warehouse's native rollback functionality to reverse changes if needed.
- D. Configure production jobs to use a pinned version of the dbt model.

Answer: A,D

Explanation:

A provides stability for the critical part of production- C offers a staging-like area within production. B is good, but doesn't prevent the breakage upstream. D isn't generally how dbt models operate-

NEW QUESTION # 87

You've defined several source models using .yml files within your models directory. When you run dbt compile, they don't appear in the DAG visualization. What's the MOST likely cause?

- A. You haven't explicitly configured these sources in your dbt_project.yml file.
- B. The source definitions require additional schema tests to be valid.
- C. You haven't used the ref() function correctly within your source models.
- D. The source tables are missing appropriate permissions in your database.

Answer: A

Explanation:

While other issues are possible, sources must have configurations in dbt_project.yml to be included in the DAG.

NEW QUESTION # 88

.....

Since it is obvious that different people have different preferences, we have prepared three kinds of different versions of our dbt-Analytics-Engineering practice test, namely, PDF version, Online App version and software version.
