

最新2V0-15.25題庫資訊使傳遞VMware Cloud Foundation 9.0 Support有效資料更方便

從Google Drive中免費下載最新的VCESoft 2V0-15.25 PDF版考試題庫：https://drive.google.com/open?id=1_mF3qf9GPYb6ZvuSjFCTI2IGBNuGbZ3N

你正在為了怎樣通過VMware的2V0-15.25考試絞盡腦汁嗎？VMware的2V0-15.25考試的認證資格是當代眾多IT認證考試中最有價值的資格之一。在近幾十年裏，IT已獲得了世界各地人們的關注，它已經成為了現代生活中不可或缺的一部分。其中，VMware的認證資格已經獲得了國際社會的廣泛認可。所以很多IT人士通過VMware的考試認證來提高自己的知識和技能。2V0-15.25認證考試就是最重要的考試之一。這個認證資格能為大家帶來很大的好處。

VCESoft題供了不同培訓工具和資源來準備VMware的2V0-15.25考試，編制指南包括課程，實踐的檢驗，測試引擎和部分免費PDF下載，我們的考題及答案反應的問題問VMware的2V0-15.25考試。

>> 最新2V0-15.25題庫資訊 <<

100%保障最新2V0-15.25題庫資訊，最有效的考試題庫幫助妳壹次性通過2V0-15.25考試

每個人心中都有一個烏托邦的夢，夢境的虛有讓人覺得心灰意冷，在現實中，其實這並不是虛有的，只要你採取一定的方是方法，一切皆有可能。VMware的2V0-15.25考試認證將會從遙不可及變得綽手可得。這是為什麼呢，因為有VCESoft VMware的2V0-15.25考試培訓資料在手，VCESoft VMware的2V0-15.25考試培訓資料是IT認證最好的培訓資料，它以最全最新，通過率最高而聞名，而且省時又省力，有了它，你將輕鬆的通過考試。實現了你的夢想，你就有了自信，有了自信你將走向成功。

VMware 2V0-15.25 考試大綱：

主題	簡介
主題 1	IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.
主題 2	Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.
主題 3	Install, Configure, Administrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.
主題 4	VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.

主題 5	• Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.

最新的 Professional Level Exams 2V0-15.25 免費考試真題 (Q17-Q22):

問題 #17

An administrator attempts to configure a Microsoft Certificate Authority in VMware Cloud Foundation (VCF) Operations supplying a certificate template name of VMware. The attempt fails with error, "Certificate authorities update failed." What is the possible cause of this failure?

- A. The user account has only the "Enroll" permission on the certificate template.
- B. The user account has only the "Read" and "Enroll" permission on the certificate template.
- C. The user account does not have the "Read" and "Autoenroll" permission on the certificate template.
- D. The user account does not have the "Enroll" permission on the certificate template.

答案: A

解題說明:

To successfully configure a Microsoft Certificate Authority (CA) in VMware Cloud Foundation (VCF) Operations (formerly vRealize/Aria Operations), the service account used for the integration must have specific permissions on the Certificate Template (e.g., the "VMware" template).

* Required Permissions: The VCF 9.0 and Aria Operations documentation explicitly states that the service account must be assigned Read and Enroll permissions on the target Certificate Template.

* Read: This permission is critical for the "Discovery" and "Validation" phase. It allows VCF Operations to query the CA, list available templates, and read the template's properties (like Key Usage and Extended Key Usage) to ensure they meet the security requirements (e.g., Server Authentication, Non-Repudiation).

* Enroll: This permission allows the account to actually submit a Certificate Signing Request (CSR) via the interface and receive a signed certificate.

* The Cause of Failure (Option A): If the user account is configured with only the "Enroll" permission, it effectively lacks the "Read" permission. Without "Read", VCF Operations cannot "see" or validate the template during the configuration wizard. The application attempts to fetch the template details, fails (because the template is invisible to it), and throws the error "Certificate authorities update failed."

* Why other options are incorrect:

* Option D (Read and Enroll): This is the correct and recommended configuration. If the user had these permissions, the operation would succeed (assuming other prereqs like Basic Auth are met).

* Option C (Autoenroll): The Autoenroll permission is designed for Windows Group Policy-based background renewal. It is not required for the VCF Operations API-based integration, which relies on explicit "Enroll" calls.

問題 #18

An administrator is attempting to activate a new vSphere Supervisor for use with VMware Cloud Foundation (VCF) Automation on a newly deployed cluster. In the VMware vSphere client, when going through the vSphere Supervisor activation having selected VCF Networking with VPC, the Virtual Private Cloud (VPC) Connectivity Profile dropdown is empty on the workload network page. The administrator verified that a Virtual Private Cloud (VPC) Connectivity Profile exists in NSX. What is the cause of the issue?

- A. The vSphere Supervisor control plane is set to high-availability.
- B. The selected NSX Project is the Default Project.
- C. The TO gateway is in active/active mode.
- D. The default VPC has not been created.

答案: B

解題說明:

When activating a vSphere Supervisor using VCF Networking with VPC, the Supervisor Workload Network must use a VPC Connectivity Profile. These profiles are scoped to an NSX Project, and cannot be consumed from the Default Project.

VCF Automation requires that:

- * A custom NSX Project be used for VPC networking integrations.
 - * The Default Project cannot host Connectivity Profiles or VPC constructs intended for Supervisor activation.
- Even though the administrator verified that a VPC Connectivity Profile exists in NSX, the Supervisor wizard will not display it if:
- * The VPC Connectivity Profile belongs to a different project, or
 - * The current selection is the Default Project, which blocks visibility.

This exact behavior-empty VPC Connectivity Profile dropdown-is documented when attempting Supervisor activation under the Default NSX Project.

Option A (T0 active/active) affects North-South routing but does not hide VPC profiles.

Option B (Supervisor HA mode) does not impact network profile selection.

Option D (missing default VPC) is incorrect because the wizard is complaining about availability of Connectivity Profiles, not VPC instances.

問題 #19

An Administrator has been tasked with creating a new VMware Cloud Foundation (VCF) Automation Region named Region-2. The following information has been provided:

- * The current environment has two workload domains named WLD1 and WLD2.
- * The workload domains share one NSX Local Manager deployment.
- * A VCF Automation Region named region-1 exists that uses the shared NSX Local Manager deployment.

When creating the second Region in VCF Automation, the administrator sees "No results" when attempting to select a NSX Local Manager for the Region. What should the Administrator do to resolve this issue?

- **A. Deploy a third workload domain that includes a new, dedicated NSX Local Manager deployment.**
- B. Add an additional NSX Edge Cluster in WLD1.
- C. Deploy an additional vSphere cluster in WLD1.
- D. Ensure that the NSX Manager is deployed in HA mode.

答案: A

解題說明:

In VMware Cloud Foundation (VCF) Automation, each Automation Region must be associated with a dedicated NSX Local Manager. A single NSX Local Manager instance cannot be reused across multiple Automation Regions.

In the provided scenario:

- * The existing environment has WLD1 and WLD2, both sharing one NSX Local Manager.
- * Region-1 in VCF Automation already consumes this shared NSX Local Manager.
- * When creating Region-2, the interface shows "No results" when selecting an NSX Local Manager.

This behavior matches documented VCF Automation constraints: an NSX Local Manager can only be mapped to a single Automation Region. Once it is consumed by one region, it is not available for any additional region.

To create a second region (Region-2), a new NSX Local Manager instance must exist in the environment.

The only supported method to obtain a new NSX Local Manager is to deploy a new workload domain, because NSX Local Manager is deployed as part of every VI Workload Domain.

Thus, the administrator must deploy a new (third) workload domain, which includes its own NSX Local Manager package, allowing Region-2 to be created successfully.

問題 #20

In VMware Cloud Foundation (VCF) Automation an administrator is troubleshooting an issue with a newly created Organization. When the Organization administrator attempts to create a Namespace, they receive an error "Failed to list VPC after selecting a region."

The administrator logs into the NSX Manager for the Region and does not see an NSX Project for the Organization. What could cause these symptoms?

- A. The Provider Administrator hasn't granted the Organization Administrator role to the First User.
- B. The Organization Administrator hasn't created a Project in the selected Region.
- C. The Organization Administrator hasn't created a VPC in the selected Region.
- **D. The Provider Administrator hasn't set up the Organization's Networking Configuration for the selected Region.**

答案: D

解題說明:

In VMware Cloud Foundation 9.0 Automation, every Organization requires a properly configured Networking Configuration for each Region in which it operates. This configuration step-performed by the Provider Administrator-creates the NSX Project corresponding to the Organization, enabling Namespace creation, VPC visibility, and workload provisioning.

The error "Failed to list VPC after selecting a region" combined with the absence of an NSX Project in NSX Manager is a direct indicator that the Organization's Networking Configuration was never initialized. VCF Automation automatically creates the NSX Project only when the Provider Admin completes this step.

Option B is invalid because the Organization Administrator cannot create NSX Projects manually; they are system-generated during networking setup.

Option C is incorrect because role assignment affects administrative permissions, not NSX project creation.

Option D is also incorrect-the Organization Admin cannot create a VPC until the NSX Project exists.

問題 #21

Through the VMware NSX Manager user interface, the administrator has identified an issue with BGP peering. Which command on the NSX Edge Transport Node provides more information about the issue?

- A. get logical-routers
- B. get log-file routing follow
- C. get edge-cluster history state
- D. get edge-cluster status

答案: B

解題說明:

When troubleshooting BGP peering issues on an NSX Edge Transport Node, VMware documentation directs administrators to examine routing logs, because BGP failures are often caused by adjacency negotiation errors, authentication mismatches, keepalive/hold timer issues, or route-policy failures.

The NSX Edge CLI command:

get log-file routing follow

streams real-time routing logs, including BGP daemon logs (bfd, routed, wdog) and provides detailed insight into:

- * BGP session establishment and teardown
- * Keepalive and hold timer exchanges
- * Neighbor state transitions
- * Route advertisement or rejection
- * Authentication mismatches
- * MTU or connectivity issues on TEP / uplinks

This is the only command in the list that exposes diagnostic-level BGP information needed to troubleshoot peering.

Option A (edge-cluster status) shows cluster membership only.

Option B (get logical-routers) shows logical router configuration, not BGP logs.

Option C (edge-cluster history state) is unrelated to routing.

問題 #22

.....

根據過去的考試題和答案的研究，VCEsoft提供的VMware 2V0-15.25練習題和真實的考試試題有緊密的相似性。VCEsoft是可以承諾您能100%通過你第一次參加的VMware 2V0-15.25 認證考試。
