

Our VMware 2V0-32 24 exam questions will correct your learning problems with the help of the test engine. All contents o

U.S. DEPARTMENT OF COMMERCE

--	--

Topic 2	• Planning and Designing: This section of the exam measures the skills of Cloud Architects and covers the architectural models and sizing requirements for vRealize Operations and vRealize Log Insight. It evaluates the ability to choose between standalone, clustered, and high-availability setups, and to plan appropriately based on scenario-based requirements for capacity and deployment type, ensuring well-designed cloud solutions.
Topic 3	• Troubleshooting and Repairing: This section of the exam measures skills of Support Engineers and covers the diagnosis and resolution of common performance and configuration issues in vRealize Operations, Log Insight, and Lifecycle Manager. It also includes cluster management options, log bundle generation, password handling, and changing authentication settings, equipping professionals to ensure system reliability.
Topic 4	• Performance-tuning, Optimization, and Upgrades: This section has no testable objectives and therefore is not directly assessed in the exam.
Topic 5	• Architecture and Technologies: This section of the exam measures the skills of Cloud Architects and covers the core differences between VMware Cloud Management offerings, focusing on SaaS versus on-premises deployments. It introduces the capabilities of vRealize Suite Lifecycle Manager, vRealize Operations, and vRealize Log Insight, helping professionals understand the foundational technologies that support VMware's cloud ecosystem.

2V0-32.24 Valid Test Questions & Real 2V0-32.24 Exam Answers

Up to now, more than 98 percent of buyers of our 2V0-32.24 practice braindumps have passed it successfully. And our 2V0-32.24 training materials can be classified into three versions: the PDF, the software and the app version. Though the content is the same, but the displays are different due to the different study habits of our customers. So we give emphasis on your goals, and higher quality of our 2V0-32.24 Actual Exam.

VMware Cloud Operations 8.x Professional V2 Sample Questions (Q53-Q58):

NEW QUESTION # 53

An administrator has been tasked to quickly recover unused allocated compute from existing development virtual machines (VMs) using vRealize Operations, as the vSphere cluster is now at capacity.

The current state of the environment:

The VMs either have dev or prod in their name.

Production VMs reside on cluster due to historical usage.

The administrator already has permission to modify any development VMs within the cluster.

Which approach below will quickly ensure cluster compute resources are recovered from the correct VMs?

- A. Generate an Undersized Virtual Machines Report to identify suitable virtual machines and liaise with the VM owners.
- **B. Exclude any Production virtual machines before running the Rightsize action.**
- C. Use the Heavy Hitter VMs Dashboard to identify the VMs which are consistently consuming a large amount of resources and liaise with the VM owners.
- D. Generate an Oversized Virtual Machines Report to identify suitable virtual machines and liaise with the VM owners.

Answer: B

Explanation:

To recover unused allocated compute resources quickly from development VMs in a cluster, the best approach is to use the Rightsize action while ensuring that Production virtual machines are excluded from the process. By excluding production VMs, the administrator can focus on development VMs (those with "dev" in their name) and adjust their resource allocations without affecting critical production systems.

NEW QUESTION # 54

Which statement is correct about the deployment process for vRealize Log Insight using vRealize Suite Lifecycle Manager?

- A. A cluster Virtual IP (VIP) address is a mandatory requirement.
- B. VMware Identity Manager (VIDM) is not a mandatory requirement.
- C. Federal Information Processing Standard (FIPS) is enabled by default.
- **D. A DHCP address can be used for vRealize Log Insight worker nodes.**

Answer: D

Explanation:

In the deployment process for vRealize Log Insight using vRealize Suite Lifecycle Manager, DHCP addresses can be used for vRealize Log Insight worker nodes. This allows the flexibility to use dynamic IP addresses for worker nodes, simplifying network configuration in some environments.

NEW QUESTION # 55

An administrator has been tasked with analyzing the impact of deploying a new application. The current infrastructure is using an external storage array.

What vRealize Operations What-If Analysis should the administrator perform to get this information?

- A. Infrastructure Planning: Hyperconverged
- B. Workload Planning: Hyperconverged
- C. Infrastructure Planning: Traditional
- **D. Workload Planning: Traditional**

Answer: D

Explanation:

To analyze the impact of deploying a new application in an environment using an external storage array, the administrator should perform a Workload Planning: Traditional analysis in vRealize Operations. This type of analysis focuses on traditional infrastructure, which includes external storage arrays and other non- hyperconverged components. It allows for evaluating how the new application might affect resources such as CPU, memory, and storage, while considering the traditional setup of the infrastructure.

NEW QUESTION # 56

An administrator updated the alert and symptom definitions. The administrator now wants to complete an upgrade to the latest version of vRealize Operations.

Which two actions can be done to preserve the customized content? (Choose two.)

- A. Backup the customized content as a YAMLfile
- **B. Backup the customized content by cloning it**
- C. Select the checkbox 'Reset Default Content' when performing the upgrade
- D. Import your custom content
- **E. Select the checkbox 'Preserve Custom Content' when performing the upgrade**

Answer: B,E

Explanation:

Select the checkbox 'Preserve Custom Content' when performing the upgrade: During the upgrade process, you can select the "Preserve Custom Content" option to ensure that any custom content, including alerts and symptoms, is retained during the upgrade to the latest version of vRealize Operations.

Backup the customized content by cloning it: Before upgrading, it's a good practice to backup customized content by cloning it. This ensures that you have a copy of the custom configurations in case they are lost or need to be restored after the upgrade.

NEW QUESTION # 57

An administrator looking to add a new FQDN of vRealize Suite Lifecycle Manager in the VMware Identity Manager catalogue.

Which action does the administrator need to take?

- A. Delete vRealize Suite Lifecycle Manager and redeploy it
- **B. Update authentication provider and re-sync FQDN**

- Answer: B**

To add a new Fully Qualified Domain Name (FQDN) of vRealize Suite Lifecycle Manager (vRSLCM) in the VMware Identity Manager catalog, the administrator needs to update the authentication provider in VMware Identity Manager and then re-sync the FQDN. This ensures the new FQDN is properly reflected in the VMware Identity Manager for seamless integration.
