IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q59-Q64):

NEW QUESTION # 59

What distinguishes a "smart" device?

- A. It is programmable by a user without specialized training.
- B. It can reapply access controls stored in its internal memory.
- **C. It augments its intelligence with information from the internet.**
- D. It can perform multiple data functions simultaneously.

Answer: C

Explanation:

Explanation/Reference: <https://towardsdatascience.com/what-is-a-smart-device-the-key-concept-of-the-internet-of-things-52da69f6f91b>

NEW QUESTION # 60

What is the potential advantage of homomorphic encryption?

- A. Ciphertext size decreases as the security level increases.
- B. It allows greater security and faster processing times.
- **C. It makes data impenetrable to attacks.**
- D. Encrypted information can be analyzed without decrypting it first.

Answer: C

NEW QUESTION # 61

Which activity would best support the principle of data quality?

- A. Providing notice to the data subject regarding any change in the purpose for collecting such data.
- B. Delivering information in a format that the data subject understands.
- **C. Ensuring that information remains accurate.**
- D. Ensuring that the number of teams processing personal information is limited.

Answer: C

NEW QUESTION # 62

Which is NOT a suitable method for assuring the quality of data collected by a third-party company?

- A. Tracking changes to data through auditing.

- B. Introducing erroneous data to see if its detected.
- C. Validating the company's data collection procedures.
- D. Verifying the accuracy of the data by contacting users.

Answer: B

Explanation:

of data collected by a third-party company. This method is generally not recommended because it involves deliberately inserting false information into a system, which can cause integrity issues and may lead to compliance and trust issues. Instead, verifying the accuracy of the data by contacting users, validating the company's data collection procedures, and tracking changes to data through auditing are more appropriate and standard methods to ensure data quality.

NEW QUESTION # 63

Which of the following does NOT illustrate the 'respect to user privacy' principle?

- A. Developing a consent management self-service portal that enables the data subjects to review the details of consent provided to an organization.
- B. Implementing privacy elements within the user interface that facilitate the use of technology by any visually-challenged users.
- C. Enabling Data Subject Access Request (DSARs) that provide rights for correction, deletion, amendment and rectification of personal information.
- D. Filing breach notification paperwork with data protection authorities which detail the impact to data subjects.

Answer: D

Explanation:

* Option A (Implementing privacy elements for visually-challenged users): This demonstrates respect to user privacy by ensuring that technology is accessible to all users, including those with disabilities. It aligns with the principle of inclusivity and respect for all users.

* Option B (Enabling DSARs): This directly respects user privacy by allowing individuals to exercise their rights to access, correct, delete, amend, and rectify their personal information. It is a core aspect of privacy rights under regulations like GDPR.

* Option C (Consent management portal): Providing a consent management self-service portal allows users to review and manage their consent preferences. This empowers users with control over their personal data, which is a key aspect of respecting user privacy.

* Option D (Filing breach notification paperwork): Filing breach notification paperwork with data protection authorities is a compliance activity rather than an illustration of respect for user privacy.

While it is necessary and legally required, it does not directly interact with or respect user privacy principles in the same way as the other options.

References:

* GDPR Articles on Data Subject Rights (Articles 15-22).

* Principles of Privacy by Design and Respect for User Privacy (Ann Cavoukian's 7 Foundational Principles).

Conclusion: Filing breach notification paperwork with data protection authorities (Option D) is a necessary compliance activity but does not directly illustrate the 'respect to user privacy' principle in the same way as the other options.
