

Seeing Analytics-Arch-201 Current Exam Content - Say Goodbye to Salesforce Certified Tableau Architect

What's more, part of that BraindumpsPass Analytics-Arch-201 dumps now are free: <https://drive.google.com/open?id=1Cgdnc12TNNY9vt1Mp8wJMKNJDOJr8gp>

BraindumpsPass aims to assist its clients in making them capable of passing the Salesforce Analytics-Arch-201 certification exam with flying colors. It fulfills its mission by giving them an entirely free Salesforce Certified Tableau Architect (Analytics-Arch-201) demo of the dumps. Thus, this demonstration will enable them to scrutinize the quality of the Salesforce Analytics-Arch-201 study material.

We provide free update of our Analytics-Arch-201 exam materials within one year and after one year the client can enjoy the 50% discounts. The old clients enjoy some certain discounts when they buy our Analytics-Arch-201 exam torrent. Our experts check whether there is the update of the test bank every day and if there is an updated version of our Analytics-Arch-201 learning guide, then the system will send it to the client automatically. And that is one of the reasons why our Analytics-Arch-201 study materials are so popular for we give more favourable prices and more considerable service for our customers.

Valid Analytics-Arch-201 Premium VCE Braindumps Materials - BraindumpsPass

BraindumpsPass is also offering 90 days free Analytics-Arch-201 updates. You can update your Analytics-Arch-201 study material for one year from the date of purchase. The Analytics-Arch-201 updated package will include all the past questions from the past papers. You can pass the Analytics-Arch-201 exam easily with the help of the PDF dumps included in the package. It will have all the questions that you should cover for the Analytics-Arch-201 Analytics-Arch-201 exam. If you are facing any issues with the products you have, then you can always contact our 24/7 support to get assistance.

Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.

Topic 2	<ul style="list-style-type: none"> • Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.
Topic 3	<ul style="list-style-type: none"> • Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.

Salesforce Certified Tableau Architect Sample Questions (Q186-Q191):

NEW QUESTION # 186

When integrating Tableau Server with an authentication method, what factor must be considered to ensure compatibility with Tableau Cloud?

- A. The need to configure a separate VPN for Tableau Cloud to support the authentication method
- B. Setting up a dedicated database server for authentication logs when using Tableau Cloud
- C. The requirement to use a specific version of Tableau Server that is exclusive to Tableau Cloud environments
- D. Ensuring the authentication method supports SAML for seamless integration with Tableau Cloud

Answer: D

Explanation:

Ensuring the authentication method supports SAML for seamless integration with Tableau Cloud When integrating Tableau Server with an authentication method that will also be compatible with Tableau Cloud, it is essential to ensure that the method supports SAML. Tableau Cloud utilizes SAML for its primary external authentication mechanism, which facilitates seamless integration and user experience across both Tableau Server and Tableau Cloud environments. Option A is incorrect because configuring a separate VPN is not a standard requirement for integrating authentication methods with Tableau Cloud. Option C is incorrect as there is no specific version of Tableau Server exclusive to Tableau Cloud for authentication purposes. Option D is incorrect because setting up a dedicated database server for authentication logs is not directly related to the integration of authentication methods with Tableau Cloud.

NEW QUESTION # 187

A financial services company needs to ensure the highest level of data security in its Tableau Server deployment. Which configuration best addresses their need for both encryption at rest and encryption over the wire?

- A. Configuring Tableau Server to use external file storage without encryption
- B. Implementing both SSL/TLS for data in transit and at-rest encryption for stored data
- C. Enabling only SSL/TLS for web client communication without encrypting the data at rest
- D. Relying solely on network-level encryption and not configuring encryption in Tableau Server

Answer: B

Explanation:

Implementing both SSL/TLS for data in transit and at-rest encryption for stored data This configuration ensures that data is encrypted both when it's being transmitted over the network (SSL/TLS) and when it's stored on disk (at-rest encryption), providing comprehensive security for sensitive financial data. Option A is incorrect because it does not address the requirement for encryption of data at rest. Option B is incorrect as it suggests using unencrypted external file storage, which is not secure. Option D is incorrect because relying only on network-level encryption leaves data at rest unsecured.

NEW QUESTION # 188

In preparing for a Tableau deployment in an educational institution, the IT team must evaluate user role distributions among faculty, administrative staff, and students. Which of the following strategies best aligns with this requirement?

- **A. Distribute roles based on individual data usage needs and responsibilities within the institution**
- B. Provide "Creator" roles to students, "Explorer" roles to faculty, and "Viewer" roles to administrative staff
- C. Assign the same "Explorer" role to all users to facilitate uniform access and usage
- D. Assign "Creator" roles to administrative staff, "Explorer" roles to students, and "Viewer" roles to faculty

Answer: A

Explanation:

Distribute roles based on individual data usage needs and responsibilities within the institution This strategy allows for a tailored approach that considers the specific requirements and data interaction levels of different groups within the educational institution, ensuring effective and secure use of Tableau. Option A is incorrect because it assumes students need the most comprehensive access, which may not align with their actual requirements or data security policies. Option B is incorrect as it may not accurately reflect the data analysis and creation needs of administrative staff and faculty. Option D is incorrect because it does not account for the different levels of data interaction and analysis needs across various user groups in the institution.

NEW QUESTION # 189

When verifying the installation of Tableau Server on a Windows system, what is important to check to ensure that file system permissions are correctly configured?

- A. The version of the file system used on the Tableau Server installation drive
- B. The amount of free disk space on the drive where Tableau Server is installed
- **C. The security permissions of the Tableau Server data and logs directories**
- D. The network settings to ensure Tableau Server can communicate with other systems

Answer: C

Explanation:

The security permissions of the Tableau Server data and logs directories After installing Tableau Server on Windows, it's important to check the security permissions of the data and logs directories of Tableau Server. Proper permissions are necessary to ensure that Tableau Server can access and manage its files effectively, without encountering access-related errors. Option A is incorrect because the amount of free disk space, while important for operation, does not impact the permissions set on the file system. Option B is incorrect as network settings, while crucial for connectivity, are not related to file system permissions for the Tableau Server directories. Option D is incorrect because the version of the file system, while important for overall compatibility, does not directly impact the permissions set on the Tableau Server directories.

NEW QUESTION # 190

An organization with a large number of Tableau users is seeking to optimize its data management and governance capabilities within its Tableau environment. Which add-on is most appropriate for this purpose?

- **A. Tableau Data Management Add-On for better data preparation and governance**
- B. Tableau Prep Conductor to exclusively manage data preparation workflows
- C. Tableau Mobile App Bootcamp to enhance mobile access for users
- D. Tableau Bridge to ensure live connections to their on-premises databases

Answer: A

Explanation:

Tableau Data Management Add-On for better data preparation and governance The Tableau Data Management Add-On provides tools for effective data preparation and strong data governance, which is crucial for an organization with a large user base to maintain data integrity and compliance. Option A is incorrect as Tableau Bridge focuses on live data connections and not specifically on data management and governance. Option C is incorrect because the Tableau Mobile App Bootcamp is about mobile access, not data governance. Option D is incorrect because while Tableau Prep Conductor is part of the Data Management Add-On, it alone does not cover the full scope of data management and governance needs.

NEW QUESTION # 191

.....

A vast majority of aspiring candidates encounter problems finding relevant and reliable Analytics-Arch-201 practice exam material that can be handy in preparing for the Salesforce Analytics-Arch-201 Certification Exam. They face hardship seeking up-to-date and authentic Salesforce Analytics-Arch-201 exam for the Salesforce Analytics-Arch-201 exam preparation.
