Pass Guaranteed VMware - Useful 3V0-21.23 Latest Materials

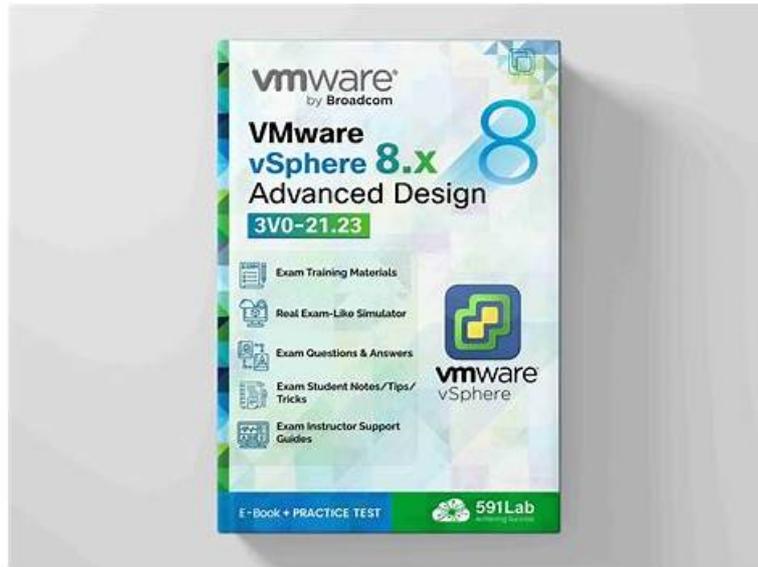

P.S. Free & New 3V0-21.23 dumps are available on Google Drive shared by Real4Prep: https://drive.google.com/open?id=1onyjx5ok8XaF9Z2I5kBW-9hHm6tlEvSO

New developments in the tech sector always bring new job opportunities. These new jobs have to be filled with the 3V0-21.23 certification holders. So to fill the space, you need to pass the 3V0-21.23 Exam. Earning the 3V0-21.23 certification helps you clear the obstacles you face while working in the VMware field.

VMware 3V0-21.23 Exam Syllabus Topics:

Topic	Details
Topic 1	• Plan and Design the VMware Solution: This part targets Solution Designers, evaluating their ability to gather business objectives, create conceptual models based on these objectives, develop logical designs, and translate them into physical designs that meet specific requirements like manageability or security.
Topic 2	• IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers differentiating between business and technical requirements, as well as conceptual, logical, and physical design. A key skill measured is "Designing System Availability."
Topic 3	• VMware Products and Solutions: Targeting VMware Engineers, this section describes VMware Cloud Foundation architecture, its components like vSphere and NSX, benefits such as automation and scalability, and use cases like hybrid cloud environments. It assesses understanding of VMware Validated Solutions.

Reliable 3V0-21.23 Test Materials - 3V0-21.23 Vce Format

Our 3V0-21.23 exam materials allow you to have greater protection on your dreams. This is due to the high passing rate of our study materials. Our 3V0-21.23 study materials selected the most professional team to ensure that the quality of the 3V0-21.23 study guide is absolutely leading in the industry, and it has a perfect service system. The focus and seriousness of our 3V0-21.23 Study Materials gives it a 99% pass rate. Using our products, you can get everything you want, including your most important pass rate. Our 3V0-21.23 actual exam is really a good helper on your dream road.

VMware vSphere 8.x Advanced Design Sample Questions (Q59-Q64):

NEW QUESTION # 59
An architect will be taking over control of a former Linux server fleet and repurposing the hardware into a new vSphere cluster. The current environment is already connected to the network but the hosts do not have any local disks. Since the fleet hardware is uniform, the architect can use a single ESXi image.
All hosts within the cluster have the same CPU and memory capacity.
Which ESXi deployment method should the architect use?

- A. Manual install of each ESXi host with an image from USB
- B. Stateless cached vSphere Auto Deploy
- C. Stateful vSphere Auto Deploy
- D. Stateless vSphere Auto Deploy

Answer: D

NEW QUESTION # 60
Which of the listed requirements would be classified as a recoverability non-functional requirement?

- A. Maintenance windows must be scheduled to take place monthly during an established overnight period.
- B. The platform must be able to support a maximum tolerable downtime (MTD) of 30 minutes.
- C. The platform must be available 24 hours a day, 7 days a week with the exception of scheduled downtime.
- D. The platform must be integrated with existing change control policies.

Answer: B

Explanation:
Recoverability - Easy to restore after an outage
Mesurements : MTD, RPO, RTO

NEW QUESTION # 61
An architect is tasked with designing a greenfield VMware software-defined data center (SDDC) solution that will be used to deliver a private cloud service for a customer.
During the initial meeting with the service owner and business sponsor, the customer has provided the following information to help inform the design:
- The solution must initially support the concurrent running of 300 production and 600 development virtual machines.
- The production environment should be delivered across two geographically dispersed data centers.
The development environment must be vSphere-based but does not have to be deployed on-premises.
- The two data centers are connected to each other through multiple diversely routed, high bandwidth and low latency links.
- The customer's server hardware standard document states that all virtual infrastructure hosts must be based on blade architecture only.
- The service owner has said that is important to ensure that neither the availability target of 99.5% nor the resource capacity is affected when the operations team completes maintenance activities, such as the monthly software patching and ad-hoc hardware break/fix.
- All virtual machine backups must be completed using the existing backup service.
- The recovery time objective (RTO) for the service is four hours.
- The recovery point objective (RPO) of the service is 24 hours.
Given the information from the customer, which two would be classified as assumptions within the design? (Choose two.)

- A. The customer will update their hardware standard to support rack mount servers
- B. The clusters will have a minimum redundancy of N+1
- C. The backup service has sufficient capacity for the new requirements
- D. The backup service will store data in a secure facility
- E. All virtual machines will be deployed with the same resource profile for production and development

Answer: B,C

NEW QUESTION # 62

An architect is updating the design for a vSphere environment.

During a workshop focused on security, the following has been identified:

It has been determined that any configuration of ESXi hosts can only be completed via VMware vCenter The Direct Console User Interface (DCUI) service must be disabled on ESXi hosts The SSH service must be disabled on ESXi hosts Based on the information from the workshop, which element does the architect need to include in the design?

- A. Strict Lockdown Mode
- B. Normal Lockdown Mode
- C. Normal Lockdown Mode with a defined Exception User list
- D. Strict Lockdown Mode with a defined Exception User list

Answer: A

Explanation:

Strict Lockdown Mode is the correct choice because it restricts all access to the ESXi host directly, ensuring that configuration can only be performed through VMware vCenter. This is in line with the requirement that configuration can only be done via vCenter. Strict Lockdown Mode disables the Direct Console User Interface (DCUI) and SSH services, which aligns with the customer's requirement to have these services disabled for security purposes.

NEW QUESTION # 63

An architect is creating a network design for a new vSphere environment.

Based on customer requirements, the environment must support the following types of traffic:

- Management
- vMotion
- vSAN
- Fault Tolerance
- Virtual machine traffic, which cannot be impacted by other types of traffic Which design recommendation can the architect make for a resilient infrastructure with vSphere network service tiering?

- A. Use different logical networks to ensure traffic is isolated with separate VLANs
- B. Use Network I/O Control and ensure appropriate share value is defined for different types of traffic giving priority to the virtual machines traffic
- C. Use a NIC teaming policy based on the physical NIC load
- D. Use two dedicated virtual switches with a single adapter each, dedicating one virtual switch for Management, vMotion, vSAN and Fault Tolerance traffic, and the second one for virtual machine traffic

Answer: B

NEW QUESTION # 64

......

Various study forms are good for boosting learning interests. So our company has taken all customers' requirements into account. Some people are not good at operating computers. So you might worry about that the 3V0-21.23 certification materials are not suitable for you. Try to believe us. Our experts have taken your worries seriously. They have made it easy to operate for all people. Even if you know little about computers, you can easily begin to do exercises of the 3V0-21.23 Real Exam dumps.
