You will never doubt anymore with our AB-900 Test Prep. Moreover, we have experts to update AB-900 quiz torrent in terms of theories and contents according to the changeable world on a daily basis, which can ensure that you are not falling behind of others by some slight knowledge gaps.

Microsoft 365 Copilot & Agent Administration Fundamentals Sample Questions (Q57-Q62):

NEW QUESTION # 57

You have a Microsoft SharePoint site named Site1 and a security group named Group1.

You need to prevent all users that currently have access to Site1 from accessing the site content unless the user is also a member of Group1.

Which settings should you configure? To answer, select the appropriate settings in the answer area.

Answer:

Explanation:

The correct setting is Restricted site access configured with Group1 . Microsoft Learn states that you can restrict access to a SharePoint site by specifying Microsoft Entra security groups or Microsoft 365 groups as the Restricted Access Control group . Microsoft also states that, after the policy is applied, a user can access the site content only if the user both already has permission to the site or content and is a member of the specified restricted access group. This exactly matches the requirement: users who currently have access to Site1 must also be members of Group1 to continue accessing the content.

The Restrict content from Microsoft 365 Copilot setting is unrelated to direct user access to the SharePoint site. That control limits whether Copilot can use site content, but it does not block users from opening the site themselves. Microsoft separately explains that Restricted SharePoint Search and Copilot restrictions are not the same as changing actual SharePoint permissions or access boundaries. So for this scenario, keep the Copilot restriction Off and configure Restricted site access with Group1 .

NEW QUESTION # 58

Your organization has a Microsoft 365 subscription.

All users are assigned a Microsoft 365 Copilot license.

You need to prevent the users from generating images by using Copilot.

What should you use?

- A. the Microsoft Entra admin center
- **B. the Microsoft 365 admin center**
- C. the Microsoft Defender portal
- D. the Microsoft Purview portal

Answer: B

Explanation:

The correct answer is C. the Microsoft 365 admin center . Microsoft Learn documents a specific Copilot image generation setting in the Microsoft 365 admin center under Copilot > Settings > Copilot actions > Copilot image generation . Microsoft states that when this scenario is allowed, users can ask Copilot to create, design, and edit images. When it is not allowed, Copilot does not generate images and instead responds with stock or brand images. This directly matches the requirement to prevent users from generating images by using Copilot.

The other options are incorrect because Microsoft does not document this control as being managed from Defender, Purview, or Entra for this scenario. Microsoft also separately notes that organizations can control access to Designer image generation through policy, but the admin experience for managing the Microsoft

365 Copilot scenario itself is explicitly surfaced in the Microsoft 365 admin center . Therefore, for an exam question focused on where an admin should go to disable image generation in Copilot, the best and documented answer is the Microsoft 365 admin center .

NEW QUESTION # 59

Select the answer that correctly completes the sentence.

Answer:

Explanation:

Explanation:

The correct answer is accountability . Microsoft's Responsible AI framework is built on six principles: fairness , reliability and safety , privacy and security , inclusiveness , transparency , and accountability .

Microsoft describes accountability as the principle that people who design and deploy AI systems must remain responsible for how those systems operate and for the impacts they create. A key part of that principle is ensuring there is human oversight so humans remain in control of decisions and system behavior.

The other options do not match the wording in the sentence as closely. Transparency focuses on helping people understand how AI systems work and why they produce certain outcomes. Privacy and security is about protecting data and securing systems.

Reliability and safety is about dependable and safe operation.

Inclusiveness is about designing AI that empowers and includes people broadly. The principle tied to oversight, responsibility, and keeping humans in control is accountability .

NEW QUESTION # 60

Select the answer that correctly completes the sentence.

Answer:

Explanation:

Explanation:

The correct answer is are NOT assigned a Microsoft 365 Copilot license. Microsoft's official reporting guidance explains that the Copilot credits report is used to manage metered consumption costs for Microsoft 365 Copilot Chat. The purpose of this report is to show credit consumption tied to pay-as-you-go billing policies, including metrics such as total credits used and credits used per user, per agent, and per billing policy. Microsoft's Copilot analytics documentation further defines these credit-related metrics around Copilot Chat users, which are users with a Microsoft 365 license but without a Microsoft 365 Copilot license who consume credits while using agents. Because licensed Microsoft 365 Copilot users are generally covered by their Copilot entitlement for included agent usage, the credits report is intended to track the metered agent usage scenario for users who are not assigned a Microsoft 365 Copilot license and who interact with work-grounded agents in Microsoft 365 Copilot Chat. That is why this option correctly completes the sentence.

NEW QUESTION # 61

Your company is piloting the use of Microsoft 365 Copilot and has purchased 100 Microsoft 365 Copilot licenses.

You need to view detailed reports about Copilot usage in Microsoft Teams, such as meeting hours summarized by Copilot and meeting actions taken by using Copilot.

What should you use?

- A. the Microsoft 365 Copilot dashboard in Microsoft Viva Insights
- B. the Microsoft 365 Copilot usage report in the Microsoft 365 admin center
- C. the Microsoft 365 Apps usage report in the Microsoft 365 admin center
- D. the Microsoft 365 Copilot readiness report in the Microsoft 365 admin center

Answer: A

Explanation:

Organizations with hundreds of Microsoft 365 Copilot licenses can use the Microsoft Copilot Dashboard in Microsoft Viva Insights to track adoption and impact. This dashboard provides detailed, aggregated metrics on Copilot usage in Microsoft Teams, including total active users, meeting hours summarized, and actions taken (such as prompts) across meetings, chat, and email.
