OGBA-101 Latest Exam Dumps & OGBA-101 Mock Exams

Today the pace of life is increasing with technological advancements. It is important for ambitious young men to arrange time properly. As busy working staff good OGBA-101 test simulations will be helper for your certification. Keeping hard working and constantly self-enhancement make you grow up fast and gain a lot of precious opportunities. Our OGBA-101 test simulations will help you twice the result with half the effort. Chance favors the one with a prepared mind.

The Open Group TOGAF Business Architecture Foundation Exam Sample Questions (Q18-Q23):

NEW QUESTION # 18

What Business Architecture concept is most related to an information Map?

- A. Value Stream Map
- **B. Business Capability Map**
- C. Organization Map
- D. Heat Map

Answer: B

Explanation:

An information map is most closely related to a Business Capability Map in the sense that both are tools used to visualize and understand different aspects of an enterprise's architecture. While an information map focuses on the relationships and flow of information within the organization, a Business Capability Map outlines the abilities and capacities the business possesses. Both are used to analyze and design architectures that support the business's objectives.

NEW QUESTION # 19

Consider the following:

You need to analyze a new value stream within the scope of a project.

Which of the following would you use?

- A. Heat mapping by value stream stages.
- B. Converting the value stream stages to entities and then building a logical data model
- **C. Combining information mapping with a business process model.**
- D. An organization chart showing the business units that work with the enterprise and their value.

Answer: C

Explanation:

To analyze a new value stream within the scope of a project, it is effective to combine information mapping with a business process model. This approach allows for a comprehensive understanding of the value stream, including the information required and produced at each stage, and how this information supports the business processes involved in delivering value.

NEW QUESTION # 20

Consider the diagram.

What are the items labelled A, B and C?

- A. A-Enterprise Strategic Architecture, B-Segment Architecture, C-Solutions Architecture
- B. A-Architecture Vision, B-Business Architecture, C-Information Systems Architecture
- **C. A-Enterprise Continuum, B-Architecture Continuum, C-Solutions Continuum**
- D. A-Enterprise Architecture, B-Architecture Building Blocks, C-Solutions Building Blocks

Answer: C

Explanation:

The diagram shows the Enterprise Continuum, which is a view of the Architecture Repository that provides methods for classifying architecture and solution artifacts as they evolve from generic Foundation Architectures to Organization-Specific Architectures⁴. The Enterprise Continuum comprises two complementary concepts: the Architecture Continuum and the Solutions Continuum. The Architecture Continuum shows the relationships among foundational frameworks, common system architectures, industry architectures, and enterprise architectures⁴. The Solutions Continuum shows the relationships among foundational solutions, common system solutions, industry solutions, and enterprise solutions⁴.

NEW QUESTION # 21

What is the relationship labeled Y?

- A. Consists of
- B. Creates
- **C. Enables**
- D. Receives

Answer: C

Explanation:

In TOGAF, the relationship labeled "Y" as "Enables" typically refers to how one element of the architecture facilitates or supports the functioning of another element. Here's a detailed explanation:

* Relationship Definition:

* Enables: This relationship indicates that one component (e.g., a business capability, process, or technology) enables or supports another component to function or achieve its objectives. It shows a dependency where the presence or effectiveness of one element is necessary for the other to perform effectively.

* Examples in TOGAF:

* Business Capabilities and Processes: A business capability may enable specific business processes. For instance, the capability of "Customer Relationship Management" enables processes like "Customer Support" and "Sales".

* Technology and Applications: A particular technology infrastructure may enable the operation of various business applications, ensuring they can deliver the required functionalities.

* TOGAF ADM Phases:

* Phase B: Business Architecture: Identifying how different business capabilities enable business processes helps in understanding the interdependencies and ensuring that all necessary capabilities are developed and supported.

* Phase C: Information Systems Architectures: In this phase, identifying how technology enables business applications and data flows is crucial for designing a coherent and efficient architecture.

* Importance:

* Understanding enabling relationships helps in ensuring that all necessary components are in place and functioning correctly to support the overall architecture. It also helps in identifying critical dependencies that need to be managed during implementation. In summary, the relationship labeled "Enables" describes how one component facilitates or supports the functioning of another, ensuring that the architecture is coherent and all dependencies are managed effectively.

NEW QUESTION # 22

Consider the following example value stream:

Which of the following statements is most correct?

- A. The value stream is decomposed into five sequential events.
- B. The value stream is mapped to five subsidiary value streams.
- C. The value stream is decomposed into five value stream stages
- D. The value stream consists of five sequential subprocesses.

Answer: C

Explanation:

According to the TOGAF Series Guide to Value Streams (Version 1), a value stream stage is defined as "a distinct part of a value stream that represents a group of activities contributing to an overall result" 5. A value stream stage can be expressed as a noun phrase that indicates what outcome or state is achieved by completing the stage5. For example, some possible value stream stages are "Product Ordered", "Payment Processed", or

"Customer Satisfied". The example value stream shows how an online retailer creates and delivers value for its customers by performing five value stream stages: "Acquire Retail Product", "Advertise Channels", "Display Products", "Enable Selection", "Process Payment", and "Deliver Product(s)" 5. Therefore, the value stream is decomposed into five value stream stages.

NEW QUESTION # 23
