Salesforce Certified Slack Consultant Sample Questions (Q56-Q61):

NEW QUESTION # 56

You are designing a Slack grid for a client who has multiple teams working on different projects. Based on the discovery outputs, which approach should you recommend for the grid structure?

- A. Only private channels for each team to ensure confidentiality and avoid information overload
- B. Randomly assigning team members to channels to encourage diverse interactions
- C. Separate channels for each project and team, with additional channels for cross-team collaboration and organization-wide

announcements

- D. A single channel for the entire organization to streamline communication

Answer: C

Explanation:

Based on the discovery that the client has multiple teams working on different projects, it is best to recommend separate channels for each project and team. This allows for focused communication within teams and projects. Additionally, having channels for cross-team collaboration and organization-wide announcements ensures comprehensive communication throughout the organization.

NEW QUESTION # 57

A multinational corporation is looking to improve its project management efficiency using Slack. Which administrative workflow is most appropriate to be migrated and managed within Slack?

- A. Financial reporting and handling of sensitive financial data
- **B. Project milestone tracking, team collaboration, and task assignments**
- C. Storage and management of legal documents and contracts
- D. Processing and approval of employee personal data and HR-related requests

Answer: B

Explanation:

Slack excels in facilitating project management tasks such as tracking milestones, team collaboration, and task assignments. This migration would leverage Slack's real-time communication and integration capabilities, making project management more efficient and centralized.

NEW QUESTION # 58

You are consulting with a company that has been using Slack for basic messaging. What question would provide the most insight into how they can expand their use of Slack?

- A. "Are your employees satisfied with the current range of emojis available in Slack?"
- B. "How many employees in your company currently use Slack?"
- **C. "What are the main business challenges you're currently facing that Slack could potentially help address?"**
- D. "Do you prefer using Slack on desktop or mobile?"

Answer: C

Explanation:

Understanding the business challenges the company is facing allows for a more strategic approach to expanding their use of Slack. This question can reveal areas where Slack's more advanced features, beyond basic messaging, could be leveraged to improve communication, collaboration, or workflow efficiency.

NEW QUESTION # 59

RedSplash Corp is trying to determine Slack adoption by department to understand where managers can identify Slack champions who can train other internal users.

What attributes mapping can you suggest to get an insight into this data?

- A. Create custom profile fields "Department" and "Manager" so members can update them manually.
- B. Push SCIM attributes enterprise.department and enterprise.manager.managerId from IDP to populate the custom profile fields "Department" and "Manager" in Slack.
- **C. Map SCIM attributes dept and mgr to populate the custom profile fields "Department" and "Manager" in Slack.**
- D. Create custom profile fields "Department" and "Manager" so SCIM can push values to these fields.

Answer: C

Explanation:

The correct answer is A . To evaluate Slack adoption by department and identify managers who can help nominate or develop internal champions, the client needs reliable organizational metadata in Slack. The cleanest way to achieve this is to map SCIM

attributes such as dept and mgr to Slack profile fields for Department and Manager . This keeps the fields governed by the identity source rather than relying on users to manually type their own department or manager information. Option B is weak because manual updates create inconsistent, incomplete, and untrusted profile data. Option C uses overly specific or incorrect attribute naming for the tested scenario; the expected mapping is the standard department and manager-style SCIM attribute mapping into Slack profile fields. Option D is incomplete because simply creating custom fields does not define the actual SCIM attribute mapping. For adoption analysis, Slack profile data must be structured and dependable, otherwise department-level analytics and champion identification become unreliable.

NEW QUESTION # 60

A user is having trouble finding specific past messages in a Slack channel. What is the most effective method they should use to locate these messages?

- A. Utilize Slack's search functionality with specific keywords or phrases, dates, or the user who posted the message
- B. Email the Slack support team to retrieve the message for them
- C. Rely on memory to recall when the message was posted and manually scroll through the channel
- D. Ask all members of the channel to search for and resend the message

Answer: A

Explanation:

The most effective way to locate specific past messages in Slack is to use the platform's search functionality. By inputting specific keywords or phrases, dates, or the name of the user who might have posted the message, users can quickly and efficiently find the information they are looking for.
