## SAP C-ACDET-2506 100% Accuracy | Valid Braindumps C-ACDET-2506 Free

Our C-ACDET-2506 practice materials compiled by the most professional experts can offer you with high quality and accuracy practice materials for your success. Up to now, we have more than tens of thousands of customers around the world supporting our C-ACDET-2506 exam torrent. If you are unfamiliar with our C-ACDET-2506 Study Materials, please download the C-ACDET-2506 free demos for your reference, and to some unlearned exam candidates, you can master necessities by our C-ACDET-2506 practice materials quickly. So our C-ACDET-2506 materials are elemental materials you cannot miss.

## SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite

## Sample Questions (Q29-Q34):

### NEW QUESTION # 29

Which scenarios are applicable when moving templates from the test site to the production site by ICM? Note: There are 2 correct answers to this question.

- A. Published templates with flex master data references in the test site are migrated to the production site during the first migration attempt.
- B. Draft templates on the source site are skipped.
- C. New templates that successfully migrated to the production site are in Draft state.
- D. Batch imports are available for templates when migrating configuration bundles.

**Answer: B,D**

### NEW QUESTION # 30

The customer wants to have a field to hold Contract Storage Locations and the address. Those locations are loaded from an external system, and the user should be able to search for storage locations. What should be used to hold the valid storage locations?

- A. You should load a new Enumeration Type and call it Storage Location and load the location addresses. Create a new field of type Enumeration with a custom filter to only Enumerations of type show Storage Locations.
- B. Create a new field of type Text, with a custom Validation where the available Storage Locations are listed.
- C. Create a new field of type Date, where each date entry is tied to a unique Storage Location and its corresponding address, allowing users to select locations based on historical data entries.
- D. You should create a new Flex Master Data (FMD) Template with appropriate attributes and call it Storage Location. Once the template is published and sample data loaded, you can create a custom field and select the type Storage Location.

**Answer: D**

Explanation:

For managing searchable lists of storage locations with associated attributes like addresses, the best SAP Ariba practice is to use a Flex Master Data (FMD) Template. This allows you to model the storage locations and related information dynamically. After creating the FMD template and loading the data (e.g., from CSV imports), you can create a custom field referencing the FMD type. This approach enables users to search, filter, and select valid locations efficiently, while also allowing the underlying data to be maintained separately and updated independently of the configuration.

Using text fields with validation or enumerations is insufficient for large or dynamic datasets and doesn't scale well. Date fields are unrelated to this scenario.

FMD provides a scalable and flexible solution for complex master data requirements like storage locations.

### NEW QUESTION # 31

When preparing to load legacy contracts during a Bluefield deployment in SAP Ariba Contracts, which of the following actions are required to ensure a successful migration?

- A. Manually enter legacy contract data into SAP Ariba Contracts using the application's UI instead of using import tools.
- B. Use the exact same process and tools as used in the Greenfield migration scenario to upload legacy contracts.
- C. Skip the legacy contract upload step if the Production site already contains migrated Flex Master Data Templates.
- D. Create a new customized contract upload process specifically for Bluefield deployments to accommodate differences in site structure.

**Answer: B**

### NEW QUESTION # 32

You can choose multiple field configurations and migrate them to the production site by creating a package in your test site. Which of the following steps should be included? (Select 3 correct answers)

- A. Publish the form template within the test site in order to add the form fields in the package.
- B. The Flex Master Data (FMD) templates must be defined and their data should be loaded in the production site before

migrating FMD custom fields.

- C. If you are migrating fields that are associated with enumerations, you should load those enumerations in the production site before migrating the fields.
- D. Make sure you update the string resource files in the production site before migrating the corresponding configurations from test to production site.
- E. Discard any other packages that appear in My Action Items.

**Answer: B,C,D**

Explanation:

When migrating field configurations in SAP Ariba, it's essential to prepare all dependent components to avoid migration errors.

\* Enumerations (B): These must be imported into Production before migrating fields that reference them, since the fields depend on the enumerated values to validate configurations.

\* String Resource Files (C): These contain translations and label customizations. They should be uploaded and updated in Production first to ensure that migrated fields have the proper localized text.

\* Flex Master Data (E): Since fields referencing FMD templates rely on these data structures, the templates and their associated data must exist in Production before migrating the fields that depend on them. Discarding unrelated packages (A) or publishing form templates (D) is unrelated or unnecessary for field migration workflows; fields and forms are handled separately. SAP best practices emphasize preparing all referenced master data and resource files to ensure smooth and error-free field migration.

### NEW QUESTION # 33

Which data elements are shared in a Suite-Integrated Environment? (Select 3 correct answers)

- A. Users
- B. User Group mapping
- C. Exception Types
- D. Supplier Catalogs
- E. Suppliers

**Answer: A,B,E**

Explanation:

In a Suite-Integrated SAP Ariba environment, master data elements such as Suppliers, Users, and User Group mappings are shared across sourcing and procurement modules, enabling unified access and data consistency. Supplier Catalogs and Exception Types are not typically shared master data in this context. This integration supports seamless workflows and consistent security roles, enhancing usability and governance.

### NEW QUESTION # 34

.....

Our APP version of C-ACDET-2506 exam questions can support almost any electronic device, from iPod, telephone, to computer and so on. You can use Our C-ACDET-2506 test torrent by your telephone when you are travelling far from home; I think it will be very convenient for you. You can also choose to use our C-ACDET-2506 Study Materials by your computer when you are at home. You just need to download the online version of our C-ACDET-2506 study materials, which is not limited to any electronic device and support all electronic equipment in anywhere and anytime.
