Wahrscheinlich haben viele Leute Sie über die Schwierigkeiten der ISACA AAISM informiert. Aber wir Zertpruefung möchten Ihnen mitteilen, wie einfach die ISACA AAISM Prüfung zu bestehen. Die ISACA AAISM Prüfungssoftware von unserem fähigen IT-Team können Sie bestimmt befriedigen. Sie brauchen nur die kostenlose Demo der ISACA AAISM probieren. Dann werden Sie unbesorgt kaufen. Wir hoffen, dass wir bei Ihrem Fortschritt im Bereich der IT helfen können!

ISACA AAISM Prüfungsplan:

Thema	Einzelheiten
Thema 1	AI Risk Management: This section of the exam measures the skills of AI Risk Managers and covers assessing enterprise threats, vulnerabilities, and supply chain risk associated with AI adoption, including risk treatment plans and vendor oversight.

Thema 2	AI Technologies and Controls: This section of the exam measures the expertise of AI Security Architects and assesses knowledge in designing secure AI architecture and controls. It addresses privacy, ethical, and trust concerns, data management controls, monitoring mechanisms, and security control implementation tailored to AI systems.
Thema 3	AI Governance and Program Management: This section of the exam measures the abilities of AI Security Governance Professionals and focuses on advising stakeholders in implementing AI security through governance frameworks, policy creation, data lifecycle management, program development, and incident response protocols.

Zertifizierung der AAISM mit umfassenden Garantien zu bestehen

Wenn Sie in kurzer Zeit mit weniger Mühe sich ganz effizient auf die ISACA AAISM Zertifizierungsprüfung vorbereiten, benutzen Sie doch schnell die Schulungsunterlagen zur ISACA AAISM Zertifizierungsprüfung. Sie werden von der Praxis bewährt. Viele Kandidaten haben bewiesen, dass man mit der Hilfe von Zertpruefung die Prüfung 100% bestehen können. Mit Zertpruefung können Sie Ihr Ziel erreichen und die beste Effekte erzielen.

ISACA Advanced in AI Security Management (AAISM) Exam AAISM Prüfungsfragen mit Lösungen (Q192-Q197):

192. Frage

Which of the following strategies is the MOST effective way to protect against AI data poisoning?

- A. Increasing model complexity to better handle data variations
- B. Ensuring the model is trained on diverse data sources
- **C. Using robust data validation techniques and anomaly detection**
- D. Incorporating more features and data into model training

Antwort: C

Begründung:

AAISM directs organizations to prevent training-time attacks by hard-gating data ingestion with provenance checks, schema and label validation, sanitization, and anomaly/outlier detection prior to model training. These controls most directly block poisoned records from entering the pipeline and are prioritized over architectural complexity or sheer data volume. Diversity of sources can improve representativeness but does not reliably stop adversarial contamination.

193. Frage

Which of the following BEST describes the role of transparency in AI?

- A. Publishing AI mechanisms, data sources, and decision-making processes while making them openly available
- B. Persuading someone that the AI tool in use is beneficial and operates as expected
- C. Talking through a decision tree to better understand how the algorithm made each of its choices
- **D. Explaining the AI system in an understandable and logical way so reasons for decisions can be given**

Antwort: D

Begründung:

Transparency in AI is a governance principle requiring that systems be explainable to stakeholders in ways that are understandable and meaningful, enabling clear articulation of how decisions were reached and why.

Within an AI program, transparency supports accountability, auditability, and trust by ensuring that reasons for decisions can be communicated and scrutinized. Option C reflects this definition by focusing on intelligible, logical explanations of system behavior and

decision rationale.

Option A is a narrow technique (model-specific interpretability for decision trees) and does not capture transparency as a broad governance requirement. Option B conflates transparency with full public disclosure; transparency does not require making all artifacts openly available. Option D is persuasion/advocacy, not transparency.

References: AI Security Management™ (AAISM) Body of Knowledge: "AI Governance-Transparency and Explainability," "Accountability and Assurance"; AAISM Study Guide: "Explainability Objectives and Stakeholder Communication," "Documentation for Decision Rationale."

194. Frage

An organization is designing an AI-based credit risk assessment system integrating sensitive financial data. Which option BEST supports security-by-design?

- A. Applying threat modeling specific to AI components before deployment
- B. Segmenting AI services across containers
- C. Restricting access to AI models using IP allow lists
- D. Integrating differential privacy mechanisms into model training

Antwort: A

Begründung:

AAISM identifies AI-specific threat modeling as an essential early-stage control in security-by-design, particularly for high-risk systems like credit scoring. It systematically identifies:

- * data poisoning
- * bias vulnerabilities
- * model evasion
- * model extraction
- * misuse scenarios

Differential privacy (A) is powerful but is a mitigation, not the overarching design control. Segmentation (C) and IP allow lists (D) are supporting controls but not the foundational step in secure design.

References: AAISM Study Guide - Security-by-Design; AI Threat Modeling.

195. Frage

Which of the following is BEST for analyzing true positives, true negatives, false positives, and false negatives produced by an AI model?

- A. Hyperparameter tuning
- B. Confusion matrix
- C. Recall
- D. Precision

Antwort: B

Begründung:

A confusion matrix explicitly tabulates TP, TN, FP, FN, serving as the basis for derived metrics (precision, recall, F1, specificity) and error analysis. Precision and recall are single metrics derived from the matrix; hyperparameter tuning is a process, not an analysis artifact.

References: AAISM Body of Knowledge: Model Evaluation & Assurance-Classification Metrics and Error Analysis; AAISM Study Guide: Confusion Matrix Fundamentals and Derived Measures.

196. Frage

Which strategy BEST ensures generative AI tools do not expose company data?

- A. Ensuring AI tools comply with local regulations
- B. Implementing a solution prohibiting input of sensitive data
- C. Testing AI tools before implementation
- D. Conducting an independent AI data audit

Antwort: B

AIISM identifies the strongest immediate control for preventing data leakage into generative AI systems as technically restricting or blocking user entry of sensitive data.

Audits (A) are retrospective. Testing tools (C) does not prevent user error. Regulatory compliance (D) does not stop operational leakage.

References: AAISM Study Guide - Data Leakage Prevention and Input Restriction Controls.

197. Frage

• • • • •

Heute steigert sich alles außer dem Gehalt sehr schnell. Wollen Sie nicht einen Durchbruch machen? Sie können Ihr Gehalt verdoppeln. Das ist sehr wahrscheinlich. Wenn Sie nur die ISACA AAISM Zertifizierungsprüfung bestehen können, können Sie bekommen, wie Sie wollen. Die Dumps von Zertpruefung wird Ihnen helfen, die ISACA AAISM Prüfung 100% zu bestehen, was uns sehr wundert. Das ist echt, Sie sollen keine Zweifel haben.
