### Salesforce Order Management Administrator Accredited Professional Sample Questions (Q28-Q33):

#### NEW QUESTION # 28

What does the number of Fulfillment Orders created depend upon?

- **A. Fulfillment Location, Delivery Method and Recipient Address**
- B. Fulfillment Location, Delivery Method and Number of Payments
- C. Fulfillment Location, Delivery Charges and Quantity
- D. Fulfillment Location, Recipient Address and Quantity

**Answer: A**

Explanation:

Explanation

The number of Fulfillment Orders created depends on three factors: Fulfillment Location, Delivery Method and Recipient Address. These factors determine how the Order Items are grouped and allocated to Fulfillment Orders based on routing rules and inventory availability. For example, if an order has two items that can be fulfilled from different locations, or have different delivery methods or recipient addresses, then two Fulfillment Orders are created for that order. Verified

#### NEW QUESTION # 29

A customer wants to change the layout of the out of the box Order Summary Lightning Record Page to three columns instead of two. How can an administrator satisfy this requirement?

- **A. Edit the Lightning Record Page and change the Template to Three Regions**
- B. Add another column component to the existing Lightning Record Page
- C. Create a new Lightning Record Page and select the Three Regions template
- D. Change the page layout template to Three Regions in the layout editor

**Answer: A**

Explanation:

The best way for the administrator to satisfy this requirement is to edit the Lightning Record Page and change the Template to Three Regions. A Lightning Record Page is a type of page that displays details and related information about a specific record in Lightning Experience or Salesforce mobile app. A Lightning Record Page can be customized using the Lightning App Builder, which is a tool that allows administrators to drag and drop components onto a page layout. A Template is a predefined layout that determines how components are arranged on a page. A Three Regions template is a type of template that divides the page into three columns or regions. The administrator can edit the Lightning Record Page for the Order Summary object, and change the Template to Three Regions in the Lightning App Builder. Verified Reference: [https://help.salesforce.com/s/articleView?id=sf.lightning\\_app\\_builder\\_customize\\_lex\\_pages.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.lightning_app_builder_customize_lex_pages.htm&type=5) [https://help.salesforce.com/s/articleView?id=sf.lightning\\_app\\_builder\\_templates.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.lightning_app_builder_templates.htm&type=5)

### NEW QUESTION # 30

The Northern Trail Outfitters (NTO) team is already using Order Management. The team wants to transition from their home-grown Commerce engine to B2C Commerce Cloud. Which action do they need to perform?

- A. Create a Flow to download the Orders from an SFTP location where B2C Commerce drops them and then ingest the data into Order Management
- B. Export the orders from B2C periodically and import them into Order Management using a scheduled job
- C. Change the Order Integration Flow in Setup so the org will start seeing the orders flow in
- **D. File a support case to activate an integration between B2C Commerce and Order Management**

**Answer: D**

Explanation:

The integration between B2C Commerce and Order Management is not enabled by default. To activate it, an administrator needs to file a support case with Salesforce and provide the necessary information, such as the B2C Commerce instance URL, the Order Management org ID, and the API user credentials<sup>3</sup>

### NEW QUESTION # 31

An administrator has created a flow but during testing they encounter an unhandled fault error. Which three can the administrator do to get more details for debugging?

- **A. Add a Display Text component which includes `{! SFIow.FaultMessage}`**
- B. Add a screen node
- C. Add an error node
- **D. Create an error connector**
- **E. Create a fault connector**

**Answer: A,D,E**

Explanation:

Explanation

Three things that the administrator can do to get more details for debugging when encountering an unhandled fault error are:

Create a fault connector. A fault connector is a special type of connector that handles errors that occur in a flow element, such as an assignment, a loop, or an action. A fault connector can route the flow to another element or end the flow with an error message.

Add a Display Text component which includes `{! SFIow.FaultMessage}`. A Display Text component is a screen component that displays text on a screen element in a flow. The `{! SFIow.FaultMessage}` is a system variable that contains information about the error that occurred in the flow, such as the element name, error type, and error message.

Create an error connector. An error connector is a special type of connector that handles errors that occur in a screen element, such as invalid user input or required fields being left blank. An error connector can route the flow to another screen element or end the flow with an error message.

### NEW QUESTION # 32

Where should a service agent go first to initiate changes related to an Order in Order Management?

- A. Fulfillment Order Details
- B. Order Details
- **C. Order Summary Details**
- D. Change Order Details

**Answer: C**

Explanation:

A service agent should go first to the Order Summary Details page to initiate changes related to an order in Order Management. The Order Summary Details page provides a global view of the entire order lifecycle, including order capture, fulfillment, shipping, payment, invoicing, and service. From this page, a service agent can access various actions and flows to process changes such as cancellations, returns, exchanges, reshipments, refunds, and discounts. The service agent can also view related records such as Order, Fulfillment Orders, Shipments, Invoices, Credit Memos, and Change Orders.
