

Quiz 2026 Professional-Cloud-Developer: Google Certified Professional - Cloud Developer Latest Exam Sample Questions

What's more, part of that PDFDumps Professional-Cloud-Developer dumps now are free: <https://drive.google.com/open?id=1y4-RykpLjrggi0DG8-MTGoZj3M0khtc>

In this version, you don't need an active internet connection to use the Professional-Cloud-Developer practice test software. This software mimics the style of real test so that users find out pattern of the real test and kill the exam anxiety. PDFDumps offline practice exam is customizable and users can change questions and duration of Google Certified Professional - Cloud Developer (Professional-Cloud-Developer) mock tests. All the given practice questions in the desktop software are identical to the Google Certified Professional - Cloud Developer (Professional-Cloud-Developer) actual test.

Google Professional-Cloud-Developer certification exam is designed for individuals who want to demonstrate their expertise in developing applications on the Google Cloud Platform. Google Certified Professional - Cloud Developer certification is ideal for developers who have experience in building scalable and reliable applications using Google Cloud services and tools. Professional-Cloud-Developer exam measures the candidate's ability to design, develop, and deploy cloud-based solutions using various Google Cloud Platform technologies.

Google Professional-Cloud-Developer Certification is an excellent way for developers to demonstrate their skills and knowledge in developing and deploying applications on Google Cloud. It is a highly respected certification in the industry, and it can help individuals advance their careers and increase their earning potential.

Professional-Cloud-Developer free pdf demo & Professional-Cloud-Developer training material & Professional-Cloud-Developer exam prep files

Our Professional-Cloud-Developer study guide has become a brand for our candidates to get help for their exams. Because our Professional-Cloud-Developer learning materials contain not only the newest questions appeared in real exams in these years, but the most classic knowledge to master. Besides, it is unavoidable that you may baffle by some question points during review process

of the Professional-Cloud-Developer Exam Questions, so there are clear analysis under some necessary questions.

Google Certified Professional - Cloud Developer Sample Questions (Q51-Q56):

NEW QUESTION # 51

You are tasked with using C++ to build and deploy a microservice for an application hosted on Google Cloud. The code needs to be containerized and use several custom software libraries that your team has built. You want to minimize maintenance of the application's underlying infrastructure. How should you deploy the microservice?

- A. Use Cloud Shell to containerize your microservice, and deploy it on a Container-Optimized OS Compute Engine instance.
- B. Use Cloud Run functions to deploy the microservice.
- **C. Use Cloud Build to create the container, and deploy it on Cloud Run.**
- D. Use Cloud Shell to containerize your microservice, and deploy it on GKE Standard.

Answer: C

Explanation:

Using Cloud Build to create the container and deploying it on Cloud Run allows you to run custom containerized C++ microservices with minimal infrastructure management, aligning with Google Cloud's serverless best practices.

NEW QUESTION # 52

Your company has a BigQuery dataset named "Master" that keeps information about employee travel and expenses. This information is organized by employee department. That means employees should only be able to view information for their department. You want to apply a security framework to enforce this requirement with the minimum number of steps. What should you do?

- A. Create a dataset named Master dataset. Create a separate table for each department in the Master dataset. Give employees access to the specific table for their department.
- **B. Create a separate dataset for each department. Create a data pipeline for each department to copy appropriate information from the Master dataset to the specific dataset for the department. Give employees the permission to this department-specific dataset.**
- C. Create a separate dataset for each department. Create a view with an appropriate WHERE clause to select records from a particular dataset for the specific department. Authorize this view to access records from your Master dataset. Give employees the permission to this department-specific dataset.
- D. Create a dataset named Master dataset. Create a separate view for each department in the Master dataset. Give employees access to the specific view for their department.

Answer: B

NEW QUESTION # 53

You are configuring a continuous integration pipeline using Cloud Build to automate the deployment of new container images to Google Kubernetes Engine (GKE). The pipeline builds the application from its source code, runs unit and integration tests in separate steps, and pushes the container to Container Registry. The application runs on a Python web server.

The Dockerfile is as follows:

```
FROM python:3.7-alpine
COPY ./app
WORKDIR /app
RUN pip install -r requirements.txt
CMD [ "unicorn", "-w 4", "mainapp" ]
```

You notice that Cloud Build runs are taking longer than expected to complete. You want to decrease the build time. What should you do? (Choose two.)

- A. Store application source code on Cloud Storage, and configure the pipeline to use gsutil to download the source code.
- **B. Select a virtual machine (VM) size with higher CPU for Cloud Build runs.**
- C. Deploy a Container Registry on a Compute Engine VM in a VPC, and use it to store the final images.
- **D. Cache the Docker image for subsequent builds using the --cache-from argument in your build config file.**
- E. Change the base image in the Dockerfile to ubuntu:latest, and install Python 3.7 using a package manager utility.

Answer: B,D

Explanation:

<https://cloud.google.com/build/docs/optimize-builds/increase-vcpu-for-builds> By default, Cloud Build runs your builds on a standard virtual machine (VM). In addition to the standard VM, Cloud Build provides several high-CPU VM types to run builds. To increase the speed of your build, select a machine with a higher vCPU to run builds. Keep in mind that although selecting a high vCPU machine increases your build speed, it may also increase the startup time of your build as Cloud Build only starts non-standard machines on demand.

https://cloud.google.com/build/docs/optimize-builds/speeding-up-builds#using_a_cached_docker_image

The easiest way to increase the speed of your Docker image build is by specifying a cached image that can be used for subsequent builds. You can specify the cached image by adding the -- cache-from argument in your build config file, which will instruct Docker to build using that image as a cache source.

NEW QUESTION # 54

You are designing a schema for a table that will be moved from MySQL to Cloud Bigtable. The MySQL table is as follows:

```
AccountActivity
(
  Account_id int,
  Event_timestamp datetime,
  Transaction_type string,
  Amount numeric(18, 4)
) primary key (Account_id, Event_timestamp)
```

How should you design a row key for Cloud Bigtable for this table?

- A. Set Account_id_Event_timestamp as a key.
- B. Set Account_id as a key.
- **C. Set Event_timestamp_Account_id as a key.**
- D. Set Event_timestamp as a key.

Answer: C

NEW QUESTION # 55

The development teams in your company want to manage resources from their local environments. You have been asked to enable developer access to each team's Google Cloud projects. You want to maximize efficiency while following Google-recommended best practices. What should you do?

- A. Add the users to their projects, assign the relevant roles to the users, and then provide the users with each relevant Project Number.
- B. Add the users to their projects, assign the relevant roles to the users, and then provide the users with each relevant Project ID.
- C. Create groups, add the users to their groups, assign the relevant roles to the groups, and then provide the users with each relevant Project Number.
- **D. Create groups, add the users to their groups, assign the relevant roles to the groups, and then provide the users with each relevant Project ID.**

Answer: D

NEW QUESTION # 56

.....

We offer a money-back guarantee, which means we are obliged to return 100% of your sum (terms and conditions apply) in case of any unsatisfactory results. Even though the Google experts who have designed Professional-Cloud-Developer assure us that anyone who studies properly cannot fail the exam, we still offer a money-back guarantee. This way we prevent pre and post-purchase anxiety.
