

Plat-Arch-201 Exams Dumps | Plat-Arch-201 Exam Simulator Free

To pass the Salesforce Plat-Arch-201 Exam is a dream who are engaged in IT industry. If you want to change the dream into reality, you only need to choose the professional training. Exam4Free is a professional website that providing IT certification training materials. Select Exam4Free, it will ensure your success. No matter how high your pursuit of the goal, Exam4Free will make your dreams become a reality.

You can learn Plat-Arch-201 quiz torrent skills and theory at your own pace, and you will save more time and energy that you can complete other thing. We also provide every candidate who wants to get certification with free Demo to check our materials. No other Plat-Arch-201 study materials or study dumps can bring you the knowledge and preparation that you will get from the Plat-Arch-201 Study Materials available only from Exam4Free. Not only will you be able to pass any Plat-Arch-201 test, but will gets higher score, if you choose our Plat-Arch-201 study materials.

Salesforce Plat-Arch-201 Exam Simulator Free, Plat-Arch-201 Dump Torrent

With all of these Plat-Arch-201 study materials, your success is 100% guaranteed. Moreover, we have Demos as freebies. The free demos give you a prove-evident and educated guess about the content of our Plat-Arch-201 practice materials. As long as you make up your mind on this exam, you can realize their profession is unquestionable. And their profession is expressed in our Plat-Arch-201 training prep thoroughly. They are great help to pass the Plat-Arch-201 exam and give you an unforgettable experience.

Salesforce Certified Platform Data Architect Sample Questions (Q255-Q260):

NEW QUESTION # 255

UC is migrating data from legacy system to SF. UC would like to preserve the following information on records being migrated:

- Date time stamps for created date and last modified date.
- Ownership of records belonging to inactive users being migrated to Salesforce.

Which 2 solutions should a data architect recommends to preserve the date timestamps and ownership on records? Choose 2 answer

- A. Enable update records with Inactive Owners Permission
- B. Log a case with SF to update these fields
- C. Enable modify all and view all permission.
- D. Enable Set Audit fields upon Record Creation Permission

Answer: A,D

Explanation:

The two solutions that a data architect should recommend to preserve the date timestamps and ownership on records being migrated are:

Enable update records with Inactive Owners Permission: This permission allows users to update record owner and sharing-based records with inactive owners. This can help preserve the original ownership of records that belong to users who are no longer active in Salesforce.

Enable Set Audit fields upon Record Creation Permission: This permission allows users to set audit fields (such as Created By or Last Modified By) when they create a record via API importing tools like Data Loader. This can help preserve the original date timestamps of records that were created or modified in another system.

Log a case with SF to update these fields is not a good solution because it is not necessary or feasible to ask Salesforce support to update these fields manually or programmatically. Enable modify all and view all permission is not a good solution because it does not affect the ability to preserve the date timestamps and ownership on records, but rather grants users access to all records regardless of sharing settings

NEW QUESTION # 256

Cloud Kicks currently has a Public Read/Write sharing model for the company's Contacts. Cloud Kicks management team requests that only the owner of a contact record be allowed to delete that contact. What should an Architect do to meet these requirements?

- A. Check if the current user is NOT the owner by creating a "before delete" trigger.
- B. Set the Sharing settings as Public Read Only for the Contact object.
- C. Set the profile of the users to remove delete permission from the Contact object.
- D. Check if the current user is NOT the owner by creating a validation rule on the Contact object.

Answer: A

Explanation:

Checking if the current user is NOT the owner by creating a "before delete" trigger can meet the requirement of allowing only the owner of a contact record to delete that contact. A trigger is a piece of Apex code that can execute before or after a record is inserted, updated, deleted, or undeleted. A "before delete" trigger can prevent the deletion of a record by using the `addError()` method.

NEW QUESTION # 257

Universal Containers (UC) wants to store product data in Salesforce, but the standard Product object does not support the more complex hierarchical structure which is currently being used in the product master system. How can UC modify the standard Product object model to support a hierarchical data structure in order to synchronize product data from the source system to Salesforce?

- A. Create a custom lookup field on the standard Product to reference the child record in the hierarchy.
- B. Create a custom master-detail field on the standard Product to reference the child record in the hierarchy.
- C. Create a custom lookup field on the standard Product to reference the parent record in the hierarchy.
- D. Create an Apex trigger to synchronize the Product Family standard picklist field on the Product object.

Answer: C

Explanation:

Creating a custom lookup field on the standard Product to reference the parent record in the hierarchy is the correct way to modify the standard Product object model to support a hierarchical data structure. This allows UC to create a self-relationship on the Product object and define parent-child relationships among products.

NEW QUESTION # 258

The data architect for UC has written a SOQL query that will return all records from the Task object that do not have a value in the WhatID field:

```
Select id, description, Subject from Task where WhatId!= NULL
```

When the data architect usages the query to select values for a process a time out error occurs.

What does the data architect need to change to make this query more performant?

- A. Add limit 100 to the query.
- B. Remove description from the requested field set.

- C. Change query to SOSL.
- **D. Change the where clause to filter by a deterministic defined value.**

Answer: D

Explanation:

According to the Salesforce documentation, SOQL is a query language that allows querying data from Salesforce objects and fields. SOQL queries have various clauses and operators that can be used to filter and sort the results. However, some clauses and operators can affect the performance of SOQL queries by increasing the cost or complexity of executing them.

To make this query more performant, a data architect should change the where clause to filter by a deterministic defined value (option D). This means using a filter condition that specifies a concrete value or range of values for a field, such as `WhatId = '001xx000003DGg3'` or `WhatId IN ('001xx000003DGg3', '001xx000003DGg4')`. This can improve the performance of the query by reducing the number of records that need to be scanned and returned. A deterministic defined value can also leverage an index on the field, which can speed up the query execution.

NEW QUESTION # 259

Universal Containers is integrating a new Opportunity engagement system with Salesforce.

According to their Master Data Management strategy, Salesforce is the system of record for Account, Contact, and Opportunity data. However, there does seem to be valuable Opportunity data in the new system that potentially conflicts with what is stored in Salesforce. What is the recommended course of action to appropriately integrate this new system?

- A. The MDM strategy defines Salesforce as the system of record, so Salesforce Opportunity values prevail in all conflicts.
- B. A policy should be adopted so that the system whose record was most recently updated should prevail in conflicts.
- **C. Stakeholders should be brought together to discuss the appropriate data strategy moving forward.**
- D. The Opportunity engagement system should become the system of record for Opportunity records.

Answer: C

Explanation:

The recommended course of action to appropriately integrate the new Opportunity engagement system with Salesforce is to bring the stakeholders together to discuss the appropriate data strategy moving forward. This is because there may be valuable data in both systems that need to be reconciled and harmonized, and the Master Data Management (MDM) strategy may need to be revised or updated to accommodate the new system. The other options are not recommended, as they may result in data loss, inconsistency, or duplication.

NEW QUESTION # 260

.....

One such trustworthy point about exam preparation material is that it first gains your trust, and then asks you to purchase it. Everyone can get help from Exam4Free's free demo of Salesforce Plat-Arch-201 exam questions. Our Salesforce Certified Platform Data Architect exam questions never remain outdated! Take a look at our Free Salesforce Plat-Arch-201 Exam Questions And Answers to check how perfect they are for your exam preparation. Once you buy it, you will be able to get free updates for Salesforce Certified Platform Data Architect exam questions for up to 1 year.
